L: 380mm W: 300mm H: 370mm

30 LITRE 54 CANS\*

L: 560mm W: 300mm H: 370mm

\* : 330ml Cans without ice capacity

## DESIGNED THE RED WAY

The Red Original Water-Tight Cool Bag is designed to deliver exceptional results so you can enjoy the ultimate paddle boarding experience. Here is how this Cool Bag is able to perform to the Red Original standard:

### YKK AQUASEAL ZIP

The best zero-leak totally waterproof zip you can get, our premium YKK zip won't corrode or fail. The durable air-tight design will perform even if submerged.

### LUGGAGE TENSIONING SYSTEM

Our coolbag attaches securely to the deck of your board with our unique tensioning system, making it a breeze to take with you on even the longest of adventures.

### THERMAL-LOCK INSULATION

Closed cell non-absorbent insulation keeps contents properly hot or cold for longer than you thought possible.

### ARMOUR TECH

Tough but tactile premium high density waterproof fabric provides the optimum in durability. Reinforced base provides traction on your deck.

## HOW TO LOOK AFTER YOUR COOL BAG

Your Cool Bag is designed to be ultra-durable. To keep it in peak performance so that it can be used time and time again follow these tips.

### CLEANING

We expect your gear to get a little dirty on your adventures. Wash off salt, dirt and grime with soapy water and rinse well with fresh water.

### DRYING

Mop up excess water with a cloth or towel. Leave the zipper open in a warm environment to ensure your kit is dry.

### YKK AQUASEAL ZIP

The best zero-leak totally waterproof zip you can get, with a little care our premium YKK zip won't corrode or fail. Do Not Force Zip, pull zip back and remove obstruction. Keep the zipper free from dirt and obstructions. Avoid over stretching the zipper opening.

### REGULAR USE

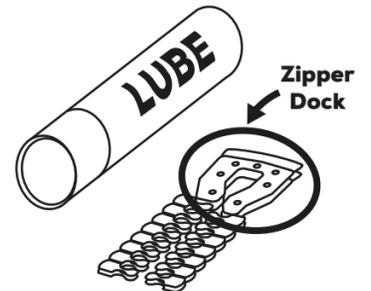

With regular use UV exposure will inevitably result in slight colour fade over time. Just remember to give the Cool Bag a good clean particularly after using in salty water.

### STORAGE

Ensure your Cool Bag is completely moisture free. Apply the supplied lubricant generously and pull the zipper to the fully closed position. This will help protect the Cool Bag's Water-Tight feature.

### LUBE IT UP

To maintain a totally waterproof seal long into the future use the supplied lubricant on the zipper dock. Carefully apply a small amount to the front, back and inside of the zipper dock to keep the zipper stick free.

## LUGGAGE TENSIONING SYSTEM

Our coolbag attaches securely to the deck of your board with our unique tensioning system, making it a breeze to take with you on even the longest of adventures.

Firstly, centrally position your Cool Bag on the front of your board and unhook the clips

Connect all four clips to the Cargo Point D-Rings located on the front of the board

Apply tension to the cord by adjusting its length using the tri-hole slider located on the cord

With the Cool Bag securely attached, make sure the zipper is fully closed before going out on the water

When you are finished with your paddle don't forget to reclip the clips back onto the Cool Bag

## LOADING ADVICE

The Red Original Water-Tight Cool Bag delivers remarkable insulating capabilities thanks to its Thermal-Lock Insulation, YKK AquaSeal Zipper and Premium High Density Waterproof Fabric. Follow these pointers to get the best out of your Cool Bag

### HOW TO KEEP COLD FOR LONGER

If it is bottles, cans or sealed cartons you wish to keep cold, fill the remaining area of your Cool Bag with plenty of ice. For keeping food cool and fresh use cool blocks. The more you pack your Cool Bag with frozen goods, the longer it'll stay cold.

### DON'T WATCH ICE MELT

The more you open up the Cool Bag, the more you are inviting unwanted air. Keep the lid closed when not in use.

### AVOID WASTING SPACE

Fill your Cool Bag with as much ice as you can. We recommend an ice to content ratio of 2:1.

### PRE CHILI OR FREEZE CONTENTS

Extend ice retention by cooling or even freezing your contents before packing your Cool Bag.

### COLD WATER PUDDLES

Don't worry if puddles form, this Cool Bag keeps water in as well as out. Keep puddles in to aid insulation just remember to keep food out of the water.

### RETAIN HEAT & COLD

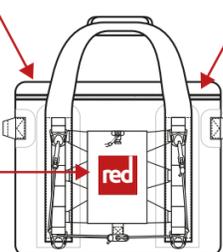

Make sure the starting temperature of the Cool Bag matches your desired outcome. Warm it if you want to retain heat, or cool it with sacrificial ice if you want it cold.

## GET THE MOST FROM YOUR COOL BAG

Check out all the features to get most out of your new investment.

Look inside to find a fully adjustable and detachable shoulder strap, simply connect it to the side D-Rings

Expandable exterior pockets, great for storing a paddle cap, sun cream and other paddling essentials

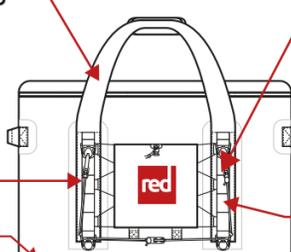

Soft shell structure making it more pleasant to carry and less painful to fall upon when paddling

Reinforced side handles for carrying plenty of ice and chilled food and drinks

Padded carry strap designed to carry heavy loads, try carrying between two for less strain when travelling longer distances

LTS stows away when not in use

Reinforced texture base for great traction and durability

Webbing daisy chains and D-Rings, great for attaching almost any additional kit using carabiners or bungee cords.

Try connecting the Red Original Dry Pouch, perfect for storing valuables on the water

The Red Original Water-Tight Cool Bag has been made from tough but tactile premium high density waterproof fabric which provides the optimum in durability.
