# GILDER'S MOP

## Pure Squirrel Hair

### DESCRIPTION:

Multipurpose, extra soft brush for various applications in handcraft gilding process. Suitable for the pressing of the metal leaf on properly prepared basecoats, it allows the application on deep carvings and frames without any damage for the leaf. Ideal to remove pieces in excess, after the application of metal leaf. Its medium size makes it suitable also for the accurate application of gypsum basecoats and Natural Bole dispersions, as well as patinas and other finishings in gilding process. Its extra-soft and elastic hairs spread any liquid product in smooth and thin layers. Available size: n° 12.

### METHOD OF USAGE:

Before first usage, gently clean with water and pH neutral soap; rinse well and let dry. If the brush is used to apply liquid products, clean well after usage, using proper thinners and always proceeding to a final wash with warm water and pH neutral soap. After rinsing, dab on a clean cloth to remove water in excess, then let dry. If the brush is used to apply and press metal leaves or loose metal powders, be sure that the hair is perfectly dry before usage. If it gets dirt with goldsize, remove any residual of glue and accurately clean the brush before a new usage.
