- 100% solid content, free from solvents and any harmful substance
- Based on natural and synthetic waxes
- Coloured with light-resistant pigments
- Available in more than 100 colours
- Free from silicones, it can be easily overlacquered
- Easy to use, it does not need professional tools
- Suitable to repair small scratches on any interior surface: wood, composite materials, pvc, enameled metal, and so on.
- For private and professional use

Touch-Up

• Clean and smooth the edges of the scratch; remove grease and dust from the surface

• If possible touch up the inner part of the damage with Holzmarker or Profix pens

• Apply the Quickfiller directly on the defect rubbing the stick transversely to the edge of the scratch or pressing inside a small quantity of filler, using Borma Touch Up spatula.

• Combine two or three colours of Quickfiller to get the wanted colour effect.

• Press well the filler and remove the excess with the spatula and an abrasive pad like white Scotch Brite.

• Before other touch up operations (for example with Profix Graining Pen) insulate the grouting with Holzspray.
