## Special Frequency Inverter for High Speed Spindle Motor

### Simple manual

#### 1. MK100 frequency converter selection:

Type	Rated capacity ( kVA )	Rated input current ( A )	Rated output current ( A )	Adaptive motor ( kW )
MK100-2S0.4	1.0	5.1	2.5	0.4
MK100-2S0.75	1.5	8.2	4.5	0.75
MK100-2S1.5	3.0	14.0	7.5	1.5
MK100-2S2.2	4.0	23.0	10.0	2.2
MK100-2S3.0	5.3	26.2	14.0	3.0
MK100-4T0.75	1.5	3.4	2.3	0.75
MK100-4T1.5	3.0	5.0	3.7	1.5
MK100-4T2.2	4.0	5.8	5.0	2.2
MK100-4T4.0	6.2	10.5	9.0	4.0

#### 2. Profile size of MK100frequency inverter and keyboard

### 3. MK100 Nameplate description:

**MK100 - 4 T 1.5**

变频器系列	
电压等级/序号	
220 V	2
380 V	4
输入电压/序号	
三相	T
单相	S

序号	适配电机功率 (kw)
0.4	0.4
1.5	1.5
4.0	4.0

Main loop input and output terminal

(1) Terminal diagram

(2) Main loop terminal description

Name of terminal	Function
R, S, T / L, N	Three-phase AC input terminal / single-phase AC input terminal
(+), PB	Brake resistance connecting terminal
U, V, W	Three-phase AC output terminal

	earth terminal
---	----------------

# 5. Diagram of jumper switch position of control board

No	function	Factory value
CN4	AI1 current / voltage input mode selection I: 0 ~ 20mA Current signal; V: 0 ~ +10V Voltage	0 ~ +10V

C N C P R O M

No	function	Factory value
	signal	
CN2	AI2 current / voltage inputmode selection I: 0 ~ 20mA Current signal; V: 0 ~ +10V Voltage signal	0 ~ +10V
CN6	AO output current / voltage type selection 0/4 ~ 20mA: AO1 terminal output current signal 0/2 ~ +10V: AO1 Terminal output voltage signal	0 ~ +10V
CN5	485 terminal resistance selection : ON: 120 $\Omega$ terminal resistor; OFF: No terminal resistance	No terminal resistance

#### 6. Control board terminal connection description:

GND	AI1	AI2	10V	X1	X2	X3	X4	X5
AO1	+485	485-	COM	SEL	24V	Y1	TA	TC

type	Terminal No.	Name	Function
communication	+485-	RS485 communication interface	RS485 Differential signal positive end
			RS485 Differential signal negative end
Imitated input	AI1-GND	Imitated input AI1	CN4 jumper selection determines voltage or current input. 1. Input voltage range : DC 0V~10V 2. Input impedance: 22k $\Omega$
Imitated input	AI2-GND	Imitated input AI2	CN2 jumper selection determines voltage or current input. 1. Input voltage range: DC 0V~10V 2. Input impedance: 22k $\Omega$
Imitated output	AO-GND	Imitated output	CN6 jumper selection determines voltage or current input. Output voltage range : 0V~10V Output current range : 0mA~20mA
Numeral input	X1 ~ X5	Multifunctional input terminal 1 ~ 5	1. Optical coupling isolation, compatible bipolar input 2. Input impedance: 2.4 k $\Omega$ 3. Voltage range when level input: 9V~30V
	SEL	External power input terminal	
	24V	+24V Power supply	Provide +24V power supply
	COM	+24V Common end of power supply	Internal isolation from GND
Numeral output	Y1-COM	Numeral output 1	Optical coupling isolation, compatible bipolar output Output voltage range: 0V~24V Output current range: 0mA~50mA
Power supply	10V-GND	External + 10V power supply	Provide+10V Power supply to external, maximum output current:10mA Generally used as external potentiometer working power supply, potentiometer resistance range: 1k $\Omega$ ~5k $\Omega$
Other	TA/ TC	relay output	Programmable is defined as the programmable terminal of multifunctional switching output

## 6. Operation panel appearance and key function

Key	Name	Function
DATA/ENTER	Function / data key	Function code menu switch, data modification confirmation
▲	Incremental key	Increment of data or function code
▼	Descending key	Decrement of data or functional codes
▶▶	Shift key	Optional parameter modified bit
RUN	Running key	Used to start control in keyboard control
STOP/RESET	Stop / reset key	In keyboard control used to stop running; Reset, to end the fault alarm state; In terminal control: reset, to end failure alarm state
M.F	Multifunction selection key	Function switching selection according to P7-15

## 7. Digital tube and indicator light description:

Keyboard indicator:

Name	state	description
RUN	Always on	Frequency converter in operation
	Always off	Frequency converter stop output
Hz	Always on	Display as frequency
L/R	Always on	Indicating now in keyboard control;
	Always off	Indicating now in terminal control;
	Twinkle	Indicating now in communication control;
Hz	Always on	Display as frequency
A	Always on	Display as current
V	Always on	Display as voltage

Keyboard indicator combination description:

Combination mode	Description
Hz, A always on	rpm
Hz, V always on	%

## 8. Functional parameter table

“☆”: This parameter can be changed when the inverter is in the state of shutdown and operation;

“★” : This parameter can not be changed when the inverter is running;

“●” : This parameter cannot be changed;

Function code	Name	Setting range	Factory value	change
P0 Basic function group				
P0-01	First motor control mode	0: no velocity sensor vector control (SVC) 1: remain 2: V/F control	2	★

Function code	Name	Setting range	Factory value	change
P0 Basic function group				
P0-02	Command source selection	0: operation panel command channel ( LED off ) 1: terminal command channel ( LED on ) 2: terminal command channel ( LED twinkle )	0	☆
P0-03	Main frequency source X selection	0: number setting ( no power-off memory ) 1: number setting ( Power-off memory ) 2: AI1 3: AI2 4: keyboard potentiometer given 5: PULSE setting 6: multi-segment instruction 7: simplePLC 8 : PID 9: communication given	1	★

## 9. Fault diagnosis and Countermeasures

No.	Fault code	Fault type	Possible cause	countermeasure
2	Err02	Acceleration overcurrent	1. Too short acceleration time 2. Low voltage 3. Small frequency converter selection	1. Increase acceleration time 2. Set the voltage to the normal range 3. Frequency converter power increase
3	Err03	Deceleration overcurrent	1. Too short deceleration time 2. Low voltage 3. No additional brake resistor	1. Increase deceleration time 2. Set the voltage to the normal range 3. Install brake resistor
4	Err04	Constant speed overcurrent	1. Low voltage 2. If a sudden load added 4. Small frequency converter selection	1. Set the voltage to normal 2. Cancel sudden load 3. Frequency converter power increase
5	Err05	Acceleration overvoltage	1. High input voltage 2. In acceleration, an external force driving motor running 3. The acceleration time is too short. 4. No brake resistor	1. Set the voltage to normal 2. Cancel external force or install brake resistor 3. Increase acceleration time 4. Add brake resistor
6	Err06	Deceleration overvoltage	1. High input voltage 2. An external force driving motor running in deceleration 3. The deceleration time is too short. 4. No brake resistor	1. Set the voltage to normal 2. Cancel external force or add brake resistor 3. Increase deceleration time 4. Add brake resistor
7	Err07	Constant speed overvoltage	1. High input voltage 2. An external force driving motor running in running	1. Set the voltage to normal Cancel external force or add brake resistor
8	Err08	Control power fault	The input voltage is not within the specified range	Set the voltage to normal
9	Err09	Undervoltage	1. The input voltage of the inverter is not within the specified range 2. Abnormal bus voltage 3. Abnormal rectifier bridge and buffer resistance anomaly 4. Abnormal control board	1. Reset failure 2. Adjust the voltage to the normal range 3. Seek technical support
10	Err10	Frequency converter overload	1. Too large load or the motor shutoff 2. Small frequency converter selection	1. Reduce the load and check the motor and machinery 3. Select a higher power inverter
11	Err11	Motor overload	1. Motor protection parameter P9-01 set properly? 2. Too large load or motor shutoff 3. Small frequency converter selection	1. Set this parameter correctly 2. Reduce load and check motor and machinery 3. Select higher power frequency converter
12	Err12	Input missing phase	1. Abnormal input power supply 2. Abnormal driver board 3. Abnormal main control board	1. Check and remove faults in outer lines 2. Seek technical support
13	Err13	Output missing phase	1. Abnormal lead from frequency converter to motor 2. In motor running, the three-phase output of the inverter unbalanced 3. Abnormal driver board	1. Remove outer faults 2. Check motor three-phase winding and remove faults 3. Seek technical support

No.	Fault code	Fault type	Possible cause	countermeasure
14	Err14	Inverter module overheating	1. High ambient temperature 2. Air duct obstruction 3. Fan damage 4. Module thermal resistor damage	1. Reduce the ambient temperature 2. Clear the air duct 3. Replace fan 4. Replace thermal resistor
15	Err15	External equipment fault	1. Input external fault signal through multifunction terminal X 2. Input the external fault signal through the virtual IO function	1. Reset operation 2. Reset operation
16	Err16	Communication fault	1. Abnormal upper computer 2. Abnormal communication line 3. Incorrectly set communication Pd group parameter	1. Check the upper computer wiring 2. Check the communication connection 3. Correctly set the communication parameters
17	Err17	Contactor fault	1. Abnormal driver board and the power supply 2. Abnormal contactor	1. Replace drive or power board 2. Replace contactor
18	Err18	Current detection fault	1. Check the abnormal Hall device 3. Abnormal driver board	1. Replace Hall device 2. Replace drive board
19	Err19	Motor tuning fault	1. Motor parameters are not set according to nameplate 3. Timeout parameter identifying	1. Set the motor parameters correctly according to the nameplate 2. Check lead from frequency converter to motor
21	Err21	EEPROM reading and writing fault	1. EEPROM chip damage	1. Replace main control board
26	Err26	Running time reach fault	1. The cumulative run time reaches the set value	1. Using the parameter initialization function to clear the record information
29	Err29	Power on time reach fault	1. The cumulative power on time reaches set value	1. Using the parameter initialization function to clear the record information
30	Err30	Load drop fault	1. Inverter running current less than P9-64	1. Confirm if the load is separated or if the P9-64P9-65 parameters are in accordance with the actual running conditions
31	Err31	PID running feedback loss	1. PID feedback less than PA-26 set value	1. Check the PID feedback signal or set the PA-26 to an appropriate value
40	Err40	Wave-by-wave limiting current fault	1. Too large load or the motor shutoff	1. Reduce load and check motor and mechanical conditions
41	Err41	Running switching motor fault	1. Change present motor selection by terminal during inverter running	1. Motor switching operation after frequency converter stops
