

KSD9700 热保护器

KSD9700 Series Thermal Protector

结构特点 Features or structure

KSD9700 系列热保护器是由碟形高灵敏双金属元件、动触头、静触片、固定底座、外壳、耐高温导线等组成。工作时双金属元件处于自由状态，动触头与静触片闭合，电路导通。当使用电器因故障发热而使温度上升至热保护器的动作温度时，双金属元件受热产生内应力而迅速动作，推开动触头离开静触片而断开电路，从而切断故障电器电源起到保护电器作用。当被保护电器温度下降到热保护器的额定复位温度值时，双金属元件恢复到初始状态触点闭合，电器恢复正常工作。该产品具有电阻小、感温快、动作迅速、安全可靠、体积小等优点。

KSD9700 series thermal protector consists of dish shape high sensitive bimetallic element, movable contact-head, static contact-piece, soleplate, outer case, thermal resistant lead and so on. When operation, the bimetallic element is in free state and movable contact-head and static contact-piece are closed and the circuit is on. When the electric appliance is in operation and produces heat caused by some troubles and temperature is raised to the rated action temperature of the product, the bimetallic element produces inner stress and acts quickly and pushes the movable contact-head and make the contact point off and the power supply is turned off the electric appliance stop. In this way the thermal protection is made. When the temperature of electric appliance to be protected is dropped to the rated reset temperature. The bimetallic element restores to its primary state and contact point is closed. The electric appliance restores its work. The product has many advantages such as small resistor, quick in temperature feeling, fast in action. Safe and reliable. compact and so on.

温度检测方法: 将试样两引线分别接在测试设备的夹具上, 通上 10mA 左右的电流 (不超过 100mA), 用一发光二极管指示电流的通断, 然后将试样放入专用测温设备内, (测试设备内温度应均匀, 加热升温速度可控制) 温度计探头应贴近试样, 控制检测设备温度以 0.5~1℃/min 的速率升温, 当发光二极管熄灭时, 记下温度计读数即为试样的动作温度。

TEST METHOD: Sample is connected to the fixture of the equipment, and placed into the test equipment (Hot current of air in the space of test should be equipped with a stirrer and temperature is controllable). A detect current about 10mA (no more then 100mA) is passed through the sample and a thermometer is placed junction to the sample to monitor the opening temperature. The temperature of the test equipment is raised at the rate of 0.5~1℃ per minute until the sample functioned.
