

# Front mud flaps

57A 075 111

ŠKODA KAROQ (NU)

Material: LDPE

Color: Black

## Practicality | Protection | Resistance | Quality

Boasting excellent driving properties in any terrain, the brand's new compact SUV, the ŠKODA KAROQ, calls for exciting off-road experiences. Designed to maintain your car's elegant look even after such trips, these front mud flaps are robust and resistant enough to **protect the car's sides against soiling and its anti-corrosion paint layer** against gravel flying off the wheels. You will appreciate their benefits in summertime when they trap dust whirling on the road, as well as in wintertime when they **reduce the quantity of aggressive road salt** landing on the bottom parts of the vehicle. The flaps are **made of high-quality flexible plastic** whose shape stability is guaranteed between -50 °C and +50 °C. Moreover, they are resistant to UV radiation and chemicals such as fuels, oils, road salt, etc. **Perfectly copying the shape** of the wheel well, the flaps do not affect the vehicle's aerodynamic properties. Their simple installation on the wheel wells **does not require any adaptations to the car's bodywork**, i.e. its corrosion protection properties remain unchanged. No matter where you go, the front mud flaps will help you keep your car clean and without scratches.
