Scheduled Reboot	-	✓

New and Improved Linksys Cloud Manager 2.0

Faster Zero Touch Provisioning

Provisioning gets even faster with devices that now take seconds, not minutes, to get their configuration from the cloud. Our new cloud portal is also more responsive, giving you important data on your networks quickly without the spinning hourglass. The platform is built from the ground up with cloud in mind, not as an afterthought. Our micro-servers deployed on AWS are always running 24/7 and have virtually zero downtime, even when new cloud features are released. They instantly become available to you without the need for inconvenient maintenance windows, because your business shouldn't be interrupted for any reason. And best of all, we are now offering Cloud Management for free for the lifetime of the device (previously 5 years free)¹. All you need to do is upgrade to the new platform for free, [click here for the full instructions](#).

Beautiful Splash Pages that Elevate your Brand

Most hardware vendors have restrictive Splash Page templates because they host the page in the device, where memory is limited. We surpass those limitations by hosting the page in the Cloud, at absolutely no additional cost to you. Not an HTML programmer? No problem! Our Splash Page editor is easy to use so what you see is really what you get. Every business is unique, don't let your brand be dictated by a basic pre-made template. Create an account for free and try it out at our new cloud portal at <https://cloudmanager.linksys.com>.

Maximize your ROI with Wi-Fi Marketing Services

Are you maximizing your engagement with your customers when they arrive and after they leave your business? With Wi-Fi Marketing Services, you get the built-in tools needed to get the maximum value from your wireless network, without having to deal with additional 3rd party services.

- Ability to serve advertisements and videos to Wi-Fi users.
- Social logins with all popular social platforms (Facebook, Google, Twitter, LinkedIn).
- Visitor analytics and demographics information.
- Integration with Mailchimp for e-mail campaigns.
- Coupon voucher system for paid for Wi-Fi with different levels of access.

Free Dedicated Technical Support for your Business

Our support staff is ready to help you and we'll get on the phone with you! We won't push you to online only help or to community forums where your questions might not get answered. Our technicians are all CCNA certified or higher, so they have the networking expertise to help you with any configuration questions you might have.
