## HEALTHCARE

**Fujifilm is renowned as one of the world's largest imaging companies, pioneering high-definition diagnostic imaging and information systems for healthcare facilities and medical institutions.**

Our clinically proven products and technologies are constantly being developed and refined to make the work of health professionals more effective and efficient.

At Fujifilm we are constantly innovating, creating new solutions that address the practical needs of our global customers in various business fields including healthcare, graphics systems, optical devices, recording media and photographic technologies.

Every year we invest around seven per cent of our consolidated turnover in research and development including dedicated research and the nurturing of close working relationships with international specialists. This ensures that we do not only meet the highest quality requirements but also contribute to the advancement of culture, science, industry and technology as well as improved health and environmental protection in society.

At Fujifilm, we are continuously developing new technologies, products and services that inspire and excite people everywhere and offer the potential to expand the horizons of tomorrow's businesses and lifestyles.

## ENDOSCOPY

**As one of the leading companies in the development of endoscope technology, Fujifilm is constantly elaborating new opportunities to provide top quality products, excellent services and highly customised business solutions in the world of endoscopy.**

We regularly set new benchmarks in the industry, for example, with the development of the Multi Light™ technology and endoscopic ultrasound systems.

The focus at Fujifilm is firmly on holistic patient care which means that our service portfolio includes expert technical assistance, a comprehensive range of hygiene products and individual consulting.

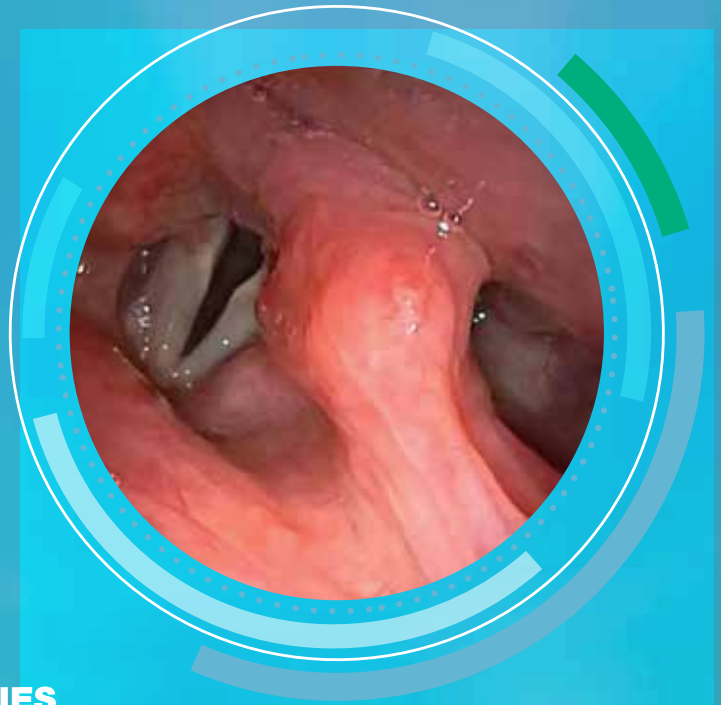

**Today Fujifilm operates in over 55 companies in Europe, employing around 4,000 people engaged in R&D, manufacturing, sales, and service support.**

# DEVELOPING **UNIQUE TECHNOLOGIES**

Our overarching aim is to help to improve the quality of life of people worldwide through the early detection and successful treatment of disease.

Fujifilm's comprehensive portfolio of advanced solutions meets a wide range of diagnostic and therapeutic endoscopic requirements and by linking state-of-the-art technologies we can provide you with some unique possibilities. The continuous enhancement of imaging technologies ensures high precision and excellent quality.

## SELECTION OF INNOVATIVE TECHNOLOGIES

**MULTI LIGHT™ TECHNOLOGY**  
Optimal illumination using variable LED light intensity.

**LCI TECHNOLOGY**  
Increased contrast in red colour leads to improved detection of inflammation and accurate delineation.

**BLI TECHNOLOGY**  
The combination of special light wavelengths results in improved and accurate contrast imaging.

**FICE TECHNOLOGY**  
FICE can enhance slight colour differences such as vascular and mucosal patterns without tissue staining. The procedure digitally selects three wavelengths of light and displays reconstructed images.

**SUPER CCD TECHNOLOGY**  
The Super CCD and high performance optical system ensures high quality images. It provides brilliant images which can facilitate procedures for detection and treatment of lesions.

**HD TECHNOLOGY**  
Combine equipment displaying this logo to ensure that you view HDTV images on your monitor.

**DICOM TECHNOLOGY**  
The goal of the DICOM standard is to achieve compatibility and improve workflow efficiency between imaging systems and other information systems.

**ANTI-BLUR FUNCTION**  
The clearest image among multiple images is automatically selected.

**CLOSE FOCUS**  
Close focus observation up to 2mm supports more precise diagnosis.

**MULTI LIGHT™ TECHNOLOGY**

**See More. Detect More.** This high performance illumination system is the latest innovation in Fujifilm’s medical device portfolio, and ensures that the quality of imaging meets the highest standards in brightness and contrast providing the innovative observation modes LCI and BLI. The ELUXEO™ in combination with the 500 series bronchoscopes provide detailed high-resolution imaging for both diagnosis and pre-therapeutic assessment.

**OPTIMAL ILLUMINATION USING VARIABLE LED LIGHT INTENSITY**

**Integrated Light Source**

- A high performance spectrum of light is generated from a powerful light source with four individual LED light bulbs.
- Specific light spectrum settings targeting the mucosal layers result in improved contrast and higher definition of imaging.

High-intensity illumination based on Multi Light™ technology creates high-quality images with White Light Imaging and the new observation modes LCI (Linked Colour Imaging) and BLI (Blue Light Imaging). With the involvement of numerous clinical experts, the ideal composition of four LEDs for each observation mode has been developed to achieve the optimal results in illumination. With a simple push of a button, you can easily switch between the following observation modes:

# ADVANCING IN **ENDOSCOPIC BRON**

Fujifilm's electronic bronchoscopes can meet all your requirements for enhanced endoscopic bronchial care.

Incorporation of leading endoscopic technologies means that these series can provide you with:

- High quality images to enhance efficiency in diagnosis
- Straight forward operability
- Improved insertability
- High levels of durability

Complemented by our video and image processors, our comprehensive range of endoscopes is suited to a wide variety of applications.

# CHIAL CARE

## EB-580 SERIES

### Electronic Video Bronchoscopes

- High resolution 580 super CCD with close focus for advanced observation
- Larger working channel suitable for various treatments

## ELUXEO™ 7000

### Video Processor & Light Source

- Full HD output and Super CCD technology produce high definition images
- Anti-blur function extracts the best still image from multiple images
- Advanced workflow enables intuitive and straightforward work processes

## EB-530US & SU-1

### Ultrasonic Bronchoscopes EB-530US

- Equipped with the Super CCD for high resolution images
- 10° forward oblique view in combination with a 120° field of view improves manoeuvrability and safety during TBNA procedures

### Endoscopic Ultrasonic Processor SU-1

- High resolution B-Mode images
- Various imaging modes
- User-friendly compact device with easy to clean flat keyboard with touch pad or trackball

## SP-900 & PB2020-M

### Ultrasonic Mini Probe System

- High resolution ultrasonic images
- Shorter distal rigid section to insert the probe more smoothly when the endoscope is bent
- Small, lightweight system as a stand-alone solution as well as part of a larger endoscopy system

MEET THE NEEDS FOR DIAGNOSIS AND TREATMENT: ELECTRONIC BRONCHOSCOPES

# EB-580S / EB-580T VERSATILE AND

The EB-580S, equipped with an optical lens and a Fujifilm high resolution image sensor for vivid and high quality images, can obtain a wide range of data for accurate endoscopic examination and diagnosis. The EB-580T provides a larger working channel allowing for faster suction.

### 2.2 MM WORKING CHANNEL FOR FASTER SUCTION POWER

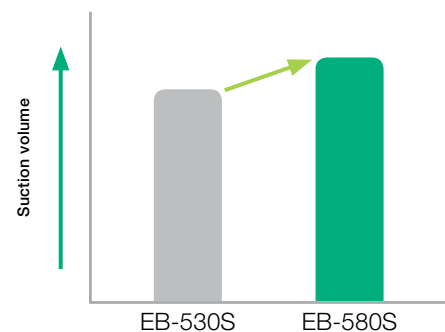

Faster suctioning offers quicker vision recovery, even during bleeding and taking biopsy. The strengthened tube of the working channel can improve durability.

### 210° UP ANGLE PROVIDES GREAT APPROACH ABILITY

Excellent bending capability (up angle: 210°) can improve reachability, especially to the upper lobe bronchus (B1-B3).

### 580 SUPER CCD & CLOSE FOCUS (2 MM)

580 Super CCD and Close Focus can achieve increased secure screening and a more precise diagnosis of bronchial lesion and lung cancer.

# PROCEDURES

## THE RIGHT ENDOSCOPE FOR THE JOB

The 530 series consists of five types of bronchoscope designed for both standard and treatment functions so that you can always choose the endoscope best suited to your purpose.

## LIGHT-WEIGHT G5-GRIP ESPECIALLY FOR LONGLASTING THERAPEUTIC USAGE

The light weight grip reduces strain on the endoscopist during the procedure and is designed to fit naturally into the hands to increase manoeuvrability.

## SINGLE-USE SUCTION BUTTON

The single-use suction button and improved internal structure facilitates a clean and less interrupted suction at any time.

## EB-530H: HIGH QUALITY IMAGES WITH A 140° FIELD OF VIEW

The EB-530H has an improved field of view of 140°, which is 20° wider than the conventional view. This enables a wider observation field to be displayed in high quality without using the digital zoom-out, supporting more effective and detailed diagnoses.

## ULTRASONIC BRONCHOSCOPE **EB-530US**

### EQUIPPED WITH A SUPER CCD IMAGE SENSOR

The Super CCD image sensor in the tip of this ultrasonic bronchoscope provides high resolution endoscopic images.

### APPROPRIATE BENDING ANGLE (UP 130°/DOWN 90°)

A large bending angle facilitates paracentesis at the target site.

### DUAL LIGHT TO SUPPORT EBUS-TBNA

Two lights ideally positioned on opposite sides illuminate the front and eliminate shadows during paracentesis. An appropriate needle angle facilitates smooth paracentesis at the target site.

# RELIABLE **PROCESSOR** TECHNOLOGY

Processor technology from Fujifilm provides you with the best processor for whatever application.

Either the high-end video processor ELUXEO™ 7000 system, which in combination with EB-580S enables LCI and BLI observation modes for demanding examinations or the standard EPX-3500HD, also featured with HDTV and anti-blur function.

With ergonomic and intuitive user controls, all our processors help to save valuable time and provide most comfortable examinations.

## ELUXEO™ LIGHT SOURCE BL-7000

### 4-LED LIGHT SOURCE WITH HIGH DURABILITY

A reliable light source is a prerequisite for use in large clinics as well as smaller outpatient centres to ensure procedures can take place as scheduled. To achieve the highest standards, the eco-friendly ELUXEO™ 7000 system features the innovative 4-LED Multi Light™ source, which outperforms conventional Xenon or Halogen light sources: With a 10,000 hours<sup>1</sup> average life expectancy of the LED lights, the ELUXEO™ system has a far longer durability while having a much lower energy consumption, resulting in a better cost-efficiency.

## ELUXEO™ Lite EP-6000

### VIDEO PROCESSOR WITH BUILT-IN LED LIGHT SOURCE

The ELUXEO™ Lite EP-6000 combines a reliable 3-LED light source with a processor that enables you to make use of the many features provided by Fujifilm's wide range of scopes. Combined with the EB-580S the innovative visualisation modes LCI (Linked Colour Imaging) and BLI (Blue Light Imaging) are available.

Due to the use of economical LED lamps with a long durability this system is very eco-friendly. It is compatible with the 530 and 580 series bronchoscopes. The ELUXEO™ Lite EP-6000 creates quality images and videos displayed in full HD on the monitor. Automatic back-up mode for data storage is integrated and the processor is also DICOM compatible.

## VIDEO PROCESSOR EPX-3500HD

### ADVANCED ENDOSCOPIC DIAGNOSTIC AND THERAPY

With its advanced image processing technology, the EPX-3500HD supports both endoscopic diagnostics and therapies. It offers clear images from superior functions such as structure enhancement (FICE), automatic light control and anti-blur. The EPX-3500HD is compatible with our full range of 580 and 530 bronchoscope series.

## SYNAPSE 3D

### 3D IMAGING AND VIRTUAL SIMULATION

SYNAPSE 3D uses unique image recognition technologies to automatically extract organs and vessels. The technology enables automatic extraction of lung, lung lobes, the bronchi, the pancreas, the colon etc. This feature makes possible a large variety of 3D analysis, such as visualisation of chronic respiratory disease.

### POWERFUL SIMULATION TOOL

The Bronchus Scope Simulation and Fine Bronchus Extracting functions make it possible to find an optimum bronchus path to reach a lung nodule by using the volume data collected with CT and then to simulate the insertion of the bronchoscope into this path.
