

SEAL RETAINER PLATE

Sun ISO 05 sandwich bodies are available for many mounting configurations and are offered in two styles. The style is determined by the method used to seal the fluid interfaces. A seal retainer plate is used on all ISO 05 sandwich bodies where it is functionally feasible to rotate the body in relation to the seal retainer plate, providing two different mounting positions. For those ISO 05 sandwich bodies where it is not functionally feasible to rotate, counterbores are included on the body sealing faces and no seal retainer plate is required. Seal retainer plate only, seals only, and combination kits are available.

TECHNICAL DATA

Material	Zinc Plated Steel
Plate Thickness	.050 in.
