1 About this document

1.1 Warnings

Structure of Information	Meaning
<p>⚠ WARNING</p> <p>Causes (/consequences) Consequences of non-compliance (if applicable) ▶ Corrective action</p>	This symbol alerts you to a dangerous situation. Failure to avoid the dangerous situation can result in a fatal or serious injury.
<p>⚠ CAUTION</p> <p>Causes (/consequences) If necessary, consequences of non-compliance (if applicable) ▶ Corrective action</p>	This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in minor or more serious injuries.
<p>NOTICE</p> <p>Cause/situation If necessary, consequences of non-compliance (if applicable) ▶ Action/note</p>	This symbol alerts you to situations which may result in damage to property.

Table 1. Warnings

1.2 Symbols on the device

Symbol	Description
	The Laser Radiation symbol is used to alert the user to the danger of exposure to hazardous visible laser radiation when using the J22 TDLAS Gas Analyzer.
	The High Voltage symbol that alerts people to the presence of electric potential large enough to cause injury or damage. In certain industries, high voltage refers to voltage above a certain threshold. Equipment and conductors that carry high voltage warrant special safety requirements and procedures.
	The ETL Listed Mark provides proof of product compliance with North American safety standards. Authorities Having Jurisdiction (AHJ) and code officials across the US and Canada accept the ETL Listed Mark as proof of product compliance to published industry standards.
	The WEEE symbol indicates that the product should not be discarded as unsorted waste but must be sent to separate collection facilities for recovery and recycling.
	The CE Marking indicates conformity with health, safety, and environmental protection standards for products sold within the European economic area (EEA).

Table 2. Symbols

1.3 U.S. export compliance

The policy of Endress+Hauser is strict compliance with U.S. export control laws as detailed in the website of the [Bureau of Industry and Security](#) at the U.S. Department of Commerce.

1.4 Document function

The document is part of the Operating Instructions and serves as a reference for parameters, providing a detailed explanation of each individual parameter of the operating menu.

1.4.1 Target group

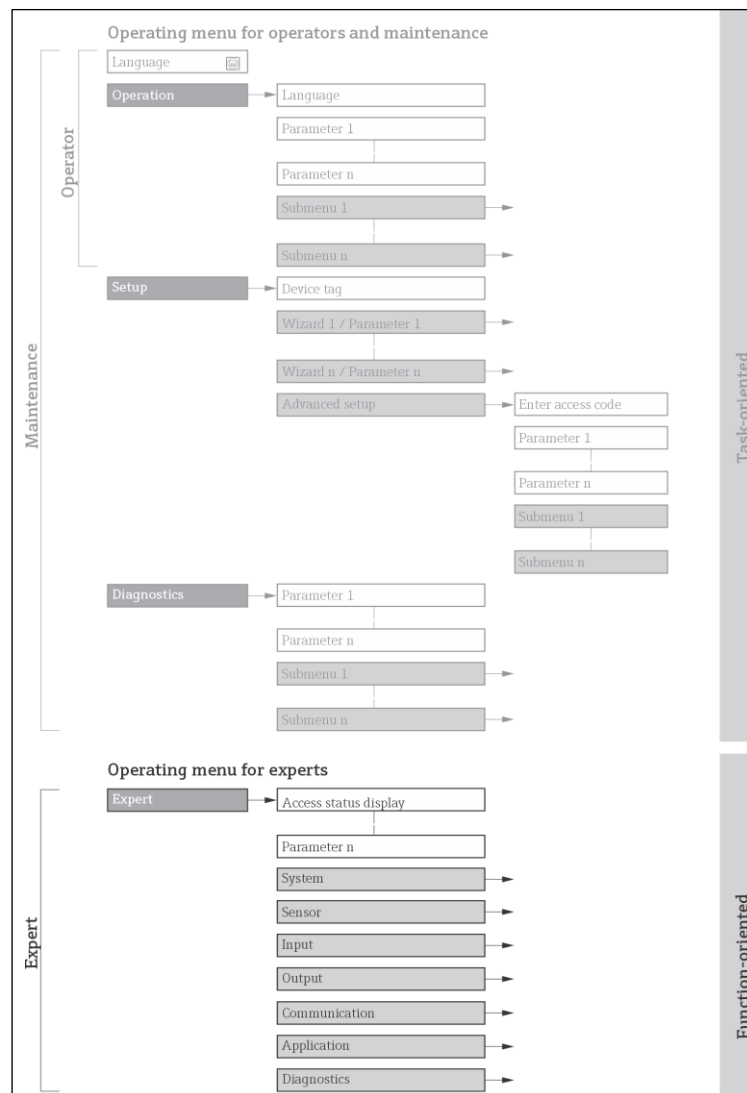

The document is aimed at specialists who work with the device over the entire life cycle and perform specific configurations. It is used to perform tasks that require detailed knowledge of the function of the device:

- Commissioning measurements under difficult conditions
- Optimal adaptation of the measurement to difficult conditions
- Detailed configuration of the communication interface
- Error diagnostics in difficult cases

1.5 Using this document

1.5.1 Document structure

The document lists the submenus and their parameters according to the structure from the [Expert menu → !\[\]\(8bba887393ca45b761e5cb49e755e762_img.jpg\)](#), which is displayed when the Maintenance user role is enabled.

AO029160-EN

 1 Sample graphic for the schematic layout of the operating menu

NOTICE

- ▶ Additional information regarding the arrangement of the parameters according to the menu structure of the Operation menu, Setup menu, Diagnostics menu with a brief description can be found in the [Operating Instructions](#) → .
- ▶ Operating concept of the operating menus can also be found in the [Operating Instructions](#) → .

1.5.2 Structure of a parameter description

The individual parts of a parameter description are described in the following section:

Completed Parameter Name	Description
Navigation	 Navigation path to the parameter via the local display or web browser  Navigation path to the parameter via the operating tool <p>The names of the menus, submenus and parameters are abbreviated to the form in which they appear on the display and in the operating tool.</p>
Prerequisite	The parameter is only available under these specific conditions
Description	Description of the parameter function
Selection	List of the individual options for the parameter <ul style="list-style-type: none"> ▪ Option 1 ▪ Option 2
User entry	Parameter entry range
User interface	Display value/data of the parameter
Factory setting	Default setting ex works
Additional information	Additional explanations such as: <ul style="list-style-type: none"> ▪ On individual options ▪ On display values/data ▪ On the input range ▪ On the factory setting ▪ On the parameter function

1.6 Symbols used**1.6.1 Symbols for types of information**

Symbol	Description
 A0011199	Tip Indicates additional information.
 A0028658	Reference to documentation
 A0028659	Reference to page
 A0028660	Reference to graphic
 A0028662	Operation via local display
 A0028663	Operation via operating tool

Symbol	Description
	Access code protected parameter

1.6.2 Symbols in graphics

Symbol	Description
1, 2, 3 ...	Item numbers
A, B, C, ...	Views
A-A, B-B, C-C, ...	Sections

1.7 Documentation

1.7.1 Standard documentation

Part Number	Document Type	Description
BA02152C	Operating Instruction	A complete overview of the operations required to install, commission, and maintain the device.
XA02708C	Safety Instruction	Requirements for installing or operating the J22 TDLAS Gas Analyzer related to personnel or equipment safety.
XA03086C	Safety Instruction INMETRO	Requirements for installing or operating the J22 TDLAS Gas Analyzer related to personnel or equipment safety. Document for INMETRO Certification.
XA03087C	Safety Instruction JPNEEx	Requirements for installing or operating the J22 TDLAS Gas Analyzer related to personnel or equipment safety. Document for JPNEEx Certification.
XA03090C	Safety Instruction PESO/KC	Requirements for installing or operating the J22 TDLAS Gas Analyzer related to personnel or equipment safety. Document for PESO/KC Certification.
TI01607C	Technical Information	Planning aid for your device. The document contains all the technical data on the analyzer.

2 Overview of the Expert menu

The following table provides an overview of the menu structure of the expert operating menu and its parameters. The page reference indicates where the associated description of the submenu or parameter can be found.

Expert	
Locking status	→ 10
User role	→ 11
Enter access code	→ 11

3 Description of device parameters

In the following section, the parameters are listed according to the menu structure of the local display. Specific parameters for the operating tools are included at the appropriate points in the menu structure.

Expert		
Locking status		→ 10
User role		→ 11
Enter access code		→ 11
▶ System		→ 12
▶ Sensor		→ 31
▶ I/O configuration		→ 52
▶ Input		→ 54
▶ Output		→ 57
▶ Communication		→ 71
▶ Diagnostics		→ 81

Locking status

Navigation   Expert → Locking status

Description Displays the active write protection.

User interface

- Hardware locked
- Temporarily locked

Additional information *User interface*
If two or more types of write protection are active, the write protection with the highest priority is shown on the local display. In the operating tool all active types of write protection are displayed.

NOTICE

- ▶ Detailed information on access authorization is provided in the "User roles and associated access authorization" and "Operating concept" sections of the [Operating Instructions for the device](#) → .

Selection

Options	Description
None	The access authorization displayed in the Locking status parameter →  applies. Only appears on local display.
Hardware locked (priority 1)	The DIP switch for hardware locking is activated on the PCB board. This locks write access to the parameters (e.g., via local display or operating tool).

Options	Description
Temporarily locked (priority 4)	Write access to the parameters is temporarily locked on account of internal processes running in the device (e.g., data upload/download, reset, etc.). Once the internal processing has been completed, the parameters can be changed once again.

User role

Navigation	🏠📄 Expert → User role
Description	Displays the access authorization to the parameters via the local display, Web browser or operating tool.
User interface	Operator Maintenance
Factory setting	Maintenance
Additional information	Access authorization can be modified via the Enter access code parameter → 📄 . If additional write protection is active, this restricts the current access authorization even further.

NOTICE

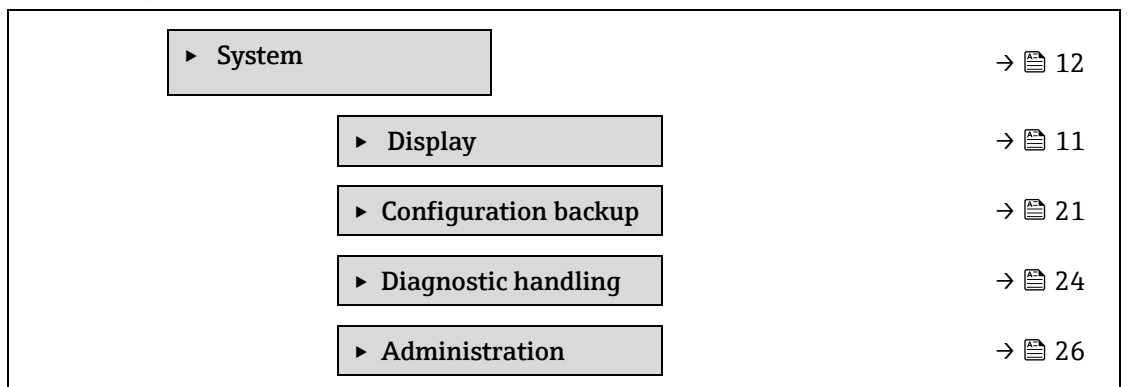

- ▶ Detailed information on access authorization is provided in the "User roles and associated access authorization" and "Operating concept" sections of the [Operating Instructions for the device → 📄](#).

Enter access code

Navigation	🏠📄 Expert → Ent. access code
Description	Use this function to enter the user-specific release code to remove parameter write protection.
User entry	Max. 16-digit character string comprising numbers, letters, and special characters
Factory setting	0000; can be changed by customer
Additional information	See the J22 Operating instruction BA02152C → 📄 for instructions on logging in.

3.1 System

Navigation 🏠📄 Expert → System

3.1.1 Display

Navigation  Expert → System → Display

► Display	
Display language	→  12
Format display	→  13
Value 1 display	→  14
0% bargraph 1	→  14
100% bargraph 1	→  14
Decimal places 1	→  15
Value 2 display	→  16
Decimal places 2	→  16
Value 3 display	→  17
0% bargraph 3	→  17
100% bargraph 3	→  17
Decimal places 3	→  17
Value 4 display	→  17
Decimal places 4	→  18
Display interval	→  18
Display damping	→  19
Header	→  20
Header text	→  20
Separator	→  21
Contrast display	→  21
Backlight	→  21

Display language

Navigation  Expert → System → Display → Display language

Prerequisite A local display is provided.

Description	Use this function to select the configured language on the local display.
Selection	English Français Italiano русский язык (Russian) 中文 (Chinese)
Factory setting	English (alternatively, the ordered language is preset in the device)

Format display

Navigation	  Expert → System → Display → Format display
Prerequisite	A local display is provided.
Description	Use this function to select how the measured value is shown on the local display.
Selection	1 value, max. size 1 bargraph + 1 value 2 values 1 value large + 2 values 4 values
Factory setting	1 value, max. size
Additional information	<p><i>Description</i></p> <p>The display format (size, bar graph, etc.) and number of measured values displayed simultaneously (1 to 4) can be configured. This setting only applies to normal operation.</p> <p>The Value 1 display parameter →  to Value 4 display parameters are used to specify which measured values are shown on the local display and in what order.</p> <p>If more measured values are specified than the display mode selected permits, then the values alternate on the device display. The display time until the next change is configured using the Display interval parameter → .</p> <p>Possible measured values shown on the local display:</p>

"1 value, max. size" option

A0016529

"1 bargraph + 1 value" option

A0013098

"2 values" option

A0013100

"1 value large + 2 values" option

A0013102

"4 values" option

A0013103

Value 1 display

Navigation  Expert → System → Display → Value 1 display

Prerequisite A local display is provided.

Description Use this function to select one of the measured values shown on the local display.

Selection	<ul style="list-style-type: none"> ▪ Concentration ▪ Dew point 1¹ ▪ Dew point 2¹ ▪ Cell gas pressure ▪ Cell gas temperature
Factory setting	Concentration
Additional information	<p><i>Description</i></p> <p>If several measured values are displayed at once, the measured value selected here will be the first value to be displayed. The value is only displayed during normal operation. The Format display parameter →  is used to specify how many measured values are displayed simultaneously and how.</p> <p><i>Dependency</i></p> <p>The unit of the displayed measured value is taken from System units → .</p>

0% bargraph value 1

Navigation	  Expert → System → Display → 0% bargraph 1
Prerequisite	A local display is provided.
Description	Use this function to enter the 0% bar graph value to be shown on the display for the measured value 1.
User entry	Signed floating-point number
Factory setting	ppmv
Additional information	<p><i>Description</i></p> <p>The Format display parameter →  is used to specify that the measured value is to be displayed as a bar graph.</p> <p><i>User entry</i></p> <p>The unit of the displayed measured value is taken from System units → .</p>

100% bargraph value 1

Navigation	  Expert → System → Display → 100% bargraph 1
Prerequisite	A local display is provided.
Description	Use this function to enter the 100% bar graph value to be shown on the display for the measured value 1.
User entry	Signed floating-point number
Factory setting	ppmv
Additional information	<p><i>Description</i></p> <p>The Format display parameter →  is used to specify that the measured value is to be displayed as a bar graph.</p>

¹ Visibility depends on order options or device settings

User entry

The unit of the displayed measured value is taken from [System units](#) → .

Decimal places 1 

Navigation	  Expert → System → Display → Decimal places 1
Prerequisite	A measured value is specified in the Value 1 display parameter →  .
Description	Use this function to select the number of decimal places for measured value 1.
Selection	Signed floating-point number <ul style="list-style-type: none"> ▪ x ▪ x.x ▪ x.xx ▪ x.xxx ▪ x.xxxx
Factory setting	x.xx
Additional information	<i>Description</i> This setting does not affect the accuracy of the device for measuring or calculating the value.

Value 2 display 

Navigation	  Expert → System → Display → Value 2 display
Prerequisite	A local display is provided.
Description	Use this function to select a measured value that is shown on the local display.
User entry	For the picklist, see the Value 1 display parameter →  .
Factory setting	None
Additional information	<i>Description</i> If several measured values are displayed at once, the measured value selected here will be the second value to be displayed. The value is only displayed during normal operation. The Format display parameter →  is used to specify how many measured values are displayed simultaneously and how. <i>Dependency</i> The unit of the displayed measured value is taken from System units →  .

Decimal places 2 

Navigation	  Expert → System → Display → Decimal places 2
Prerequisite	A measured value is specified in the Value 2 display parameter →  .
Description	Use this function to select the number of decimal places for measured value 2.
Selection	<ul style="list-style-type: none"> ▪ x ▪ x.x ▪ x.xx

- x.xxx
- x.xxxx

Factory setting

x.xx

Additional information*Description*

This setting does not affect the accuracy of the device for measuring or calculating the value.

Value 3 display**Navigation**

Expert → System → Display → Value 3 display

Prerequisite

A local display is provided.

Description

Use this function to select a measured value that is shown on the local display.

Selection

For the picklist, see the [Value 1 display parameter](#) → .

Factory setting

None

Additional information*Description*

If several measured values are displayed at once, the measured value selected here will be the third value to be displayed. The value is only displayed during normal operation.

The [Format display parameter](#) → is used to specify how many measured values are displayed simultaneously and how.

Selection

The unit of the displayed measured value is taken from [System units](#) → .

0% bargraph value 3**Navigation**

Expert → System → Display → 0% bargraph 3

Prerequisite

A selection was made in the [Value 3 display parameter](#) → .

Description

Use this function to enter the 0% bar graph value to be shown on the display for the measured value 3.

User entry

Signed floating-point number

Factory setting

None

Additional information*Description*

The [Format display parameter](#) → is used to specify that the measured value is to be displayed as a bar graph.

User entry

The unit of the displayed measured value is taken from [System units](#) → .

100% bargraph value 3**Navigation**

Expert → System → Display → 100% bargraph 3

Prerequisite

A selection was made in the [Value 3 display parameter](#) → .

Description

Use this function to enter the 100% bar graph value to be shown on the display for the measured value 3.

User entry	Signed floating-point number
Factory setting	None
Additional information	<p><i>Description</i></p> <p>The Format display parameter → is used to specify that the measured value is to be displayed as a bar graph.</p> <p><i>User entry</i></p> <p>The unit of the displayed measured value is taken from the System units →.</p>

Decimal places 3

Navigation	  Expert → System → Display → Decimal places 3
Prerequisite	A measured value is specified in the Value 3 display parameter → .
Description	Use this function to select the number of decimal places for measured value 3.
Selection	<ul style="list-style-type: none"> ▪ x ▪ x.x ▪ x.xx ▪ x.xxx ▪ x.xxxx
Factory setting	x.xx
Additional information	<p><i>Description</i></p> <p>This setting does not affect the accuracy of the device for measuring or calculating the value.</p>

Value 4 display

Navigation	  Expert → System → Display → Value 4 display
Prerequisite	A local display is provided.
Description	Use this function to select a measured value that is shown on the local display.
Selection	For the picklist, see the Value 1 display parameter → .
Factory setting	None
Additional information	<p><i>Description</i></p> <p>If several measured values are displayed at once, the measured value selected here will be the fourth value to be displayed. The value is only displayed during normal operation.</p> <p>The Format display parameter → is used to specify how many measured values are displayed simultaneously and how.</p> <p><i>Selection</i></p> <p>The unit of the displayed measured value is taken from System units →.</p>

Decimal places 4

Navigation	  Expert → System → Display → Decimal places 4
Prerequisite	A measured value is specified in the Value 4 display parameter → .

Description	Use this function to select the number of decimal places for measured value 4.
Selection	<ul style="list-style-type: none"> ▪ x ▪ x.x ▪ x.XX ▪ x.XXX ▪ x.XXXX
Factory setting	x.xx
Additional information	<p><i>Description</i></p> <p>This setting does not affect the accuracy of the device for measuring or calculating the value.</p>

Display interval

Navigation	  Expert → System → Display → Display interval
Prerequisite	A local display is provided.
Description	Use this function to enter the length of time the measured values are displayed if the values alternate on the display.
User entry	1 to 10 s
Factory setting	5 s
Additional information	<p><i>Description</i></p> <p>This type of alternating display only occurs automatically if the number of measured values defined exceeds the number of values the selected display format can display simultaneously.</p> <ul style="list-style-type: none"> ▪ The Value 1 display parameter →  to Value 4 display parameter →  is used to specify which measured values are shown on the local display. ▪ The display format for the measured values displayed is defined in the Format display parameter → .

Display damping

Navigation	  Expert → System → Display → Display damping
Prerequisite	A local display is provided.
Description	Use this function to enter a time constant for the reaction time of the local display to fluctuations in the measured value caused by process conditions.
User entry	0.0 to 999.9 s
Factory setting	0.0 s
Additional information	<p><i>User entry</i></p> <p>Use this function to enter a time constant (PT1 element¹) for display damping:</p> <ul style="list-style-type: none"> ▪ If a low time constant is entered, the display reacts particularly quickly to fluctuating measured variables. ▪ On the other hand, the display reacts more slowly if a high time constant is entered. ▪ Damping is switched off if 0 is entered (factory setting).

¹ Proportional transmission behavior with first order delay

Header

Navigation Expert → System → Display → Header

Prerequisite A local display is provided.

Description Use this function to select the contents of the header of the local display.

Selection

- Device tag
- Free text

Factory setting Device tag

Additional information
Description
 The header text only appears during normal operation.

A0029422

1 Position of the header text on the display

Selection

Device tag is defined in the [Device tag parameter](#) → .

Free text is defined in the [Header text parameter](#) → .

Header text

Navigation Expert → System → Display → Header text

Prerequisite The **Free text** option is selected in the [Header parameter](#) → .

Description Use this function to enter a customer-specific text for the header of the local display.

User entry Max. 12 characters, such as letters, numbers, or special characters (e.g., @, %, /)

Factory setting . (point)

Additional information
Description
 The header text only appears during normal operation.

A0029422

1 Position of the header text on the display

User entry

The number of characters displayed depends on the characters used.

Separator

- Navigation** Expert → System → Display → Separator
- Prerequisite** A local display is provided.
- Description** Use this function to select the decimal separator.
- Selection**
 - . (point)
 - , (comma)
- Factory setting** -----

Contrast display

- Navigation** Expert → System → Display → Contrast display
- Prerequisite** A local display is provided.
- Description** Use this function to enter a value to adapt the display contrast to the ambient conditions (e.g., the lighting or viewing angle).
- User entry** 20 to 80 %
- Factory setting** Default value is 50 %

Backlight

- Navigation** Expert → System → Display → Backlight
- Prerequisite** A local display is provided.
- Description** Use this function to switch the backlight of the local display on and off.
- Selection**
 - Disable
 - Enable
- Factory setting** Enable

3.1.2 Configuration backup

Navigation Expert → System → Configuration Backup

▶ Configuration backup	→ 21
Operating time	→ 22
Last backup	→ 22
Configuration management	→ 22
Backup state	→ 23
Comparison result	→ 23

Operating Time

Navigation	 Expert → System → Configuration backup → Operating time
Description	Use this function to display the length of time the device has been in operation.
User interface	Days (d), hours (h), minutes (m) and seconds (s)
Additional information	<i>User interface</i> The maximum number of days is 9999, which is equivalent to 27 years.

Last backup

Navigation	 Expert → System → Configuration backup → Last backup
Description	Displays the time since a backup copy of the data was last saved to the device memory.
User interface	Days (d), hours (h), minutes (m) and seconds (s)

Configuration management

Navigation	 Expert → System → Configuration backup → Configuration management
Description	Use this function to select an action to save the data to the device memory.
Selection	<ul style="list-style-type: none"> ▪ Cancel ▪ Execute backup ▪ Restore¹ ▪ Clear backup data ▪ Compare¹
Factory setting	Cancel
Additional information	<p><i>Selection</i></p> <ul style="list-style-type: none"> ▪ Cancel: No action is executed, and the user exits the parameter. ▪ Execute backup: A backup copy of the current device configuration is saved from the HistoROM backup to the memory of the device. The backup copy includes the transmitter data of the device. The following message appears on local display: Backup active, please wait! ▪ Restore¹: The last backup copy of the device configuration is restored from the device memory to the device's HistoROM backup. The backup copy includes the transmitter data of the device. The following message appears on local display: Restore active! Do not interrupt power supply! ▪ Clear backup data: The backup copy of the device configuration is deleted from the memory of the device. The following message appears on local display: Deleting file ▪ Compare¹: The device configuration saved in the device memory is compared with the current device configuration of the HistoROM backup. The following message appears on local display: Comparing files The result can be viewed in Compar. result parameter.

HistoROM

A HistoROM is a "non-volatile" device memory in the form of an EEPROM.

¹ Visibility depends on order options or device settings

Backup state

Navigation	 Expert → System → Configuration backup → Backup state
Description	Displays the status of the data backup process.
User interface	<ul style="list-style-type: none"> ▪ None ▪ Backup in progress ▪ Restoring in progress ▪ Delete in progress ▪ Compare in progress ▪ Restoring failed ▪ Backup failed
Factory setting	None

Comparison result

Navigation	 Expert → System → Configuration backup → Compar. result
Description	Displays the last result of the comparison of the data records in the device memory and in the HistoROM.
User interface	<ul style="list-style-type: none"> ▪ Settings identical ▪ Settings not identical ▪ No backup available ▪ Backup settings corrupt ▪ Check not done ▪ Dataset incompatible
Factory setting	Check not done
Additional information	<p><i>Description</i></p> <p>The comparison is started via the Compare option in the Configuration management parameter → .</p> <p><i>Selection</i></p> <ul style="list-style-type: none"> ▪ Settings identical. The current device configuration of the HistoROM is identical to the backup copy in the device memory. <ul style="list-style-type: none"> If the transmitter configuration of another device has been transmitted to the device via HistoROM in the Configuration management parameter, the current device configuration of the HistoROM is only partially identical to the backup copy in the device memory. The settings for the transmitter are not identical. ▪ Settings not identical. The current device configuration of the HistoROM is not identical to the backup copy in the device memory. ▪ No backup available. There is no backup copy of the device configuration of the HistoROM in the device memory. ▪ Backup settings corrupt. The current device configuration of the HistoROM is corrupt or not compatible with the backup copy in the device memory. ▪ Check not done. The device configuration of the HistoROM has not yet been compared to the backup copy in the device memory. ▪ Dataset incompatible. The backup copy in the device memory is not compatible with the device.

HistoROM

A HistoROM is a "non-volatile" device memory in the form of an EEPROM.

3.1.3 Diagnostic handling

Navigation  Expert → System → Diagnostic Handling

Alarm delay

Navigation  Expert → System → Diagnostic handling → Alarm delay

Description Use this function to enter the time interval until the device generates a diagnostic message. The diagnostic message is reset without a time delay.

User entry 0 to 60 s

Factory setting 0 s

Additional information *Result*
This setting affects the following diagnostic messages:

- 832 Electronics temperature too high
- 833 Electronics temperature too low
- 904 Cell gas flow not detected

Diagnostic behavior submenu

Each item of diagnostic information is assigned a specific diagnostic behavior at the factory. The user can change this assignment for specific diagnostic information in the **Diagnostic behavior** submenu.

The following options are available in the **Diagnostic no. xxx** parameters:

Alarm The device stops measurement. The measured value output via Modbus RS485 assume the defined alarm condition. A diagnostic message is generated.

The background lighting changes to red.

Warning The device continues to measure. The measured value output via Modbus RS485 is not affected. A diagnostic message is generated.

Logbook entry only The device continues to measure. The diagnostic message is displayed only in the [Event logbook submenu](#)  and is not displayed in alternation with the operational display.

Off The diagnostic event is ignored, and no diagnostic message is generated or entered.

NOTICE

► For a list of all the diagnostic events, see the [Operating Instructions for the device](#) .

Navigation  Expert → System → Diagnostic handling → Diagnostic Behavior

Diagnostic no. 302	→ 25
Diagnostic no. 441	→ 25
Diagnostic no. 444	→ 25
Diagnostic no. 905	→ 26

Diagnostic no. 302 (Device verification active)

Navigation	Expert → System → Diagnostic handling → Diagnostic behavior → Diagnostic no. 302
Description	Option for changing the diagnostic behavior of the diagnostic message 302 Device verification active .
Selection	<ul style="list-style-type: none"> ▪ Alarm ▪ Warning
Factory setting	Warning
Additional information	For a detailed description of the options available, refer to the Diagnostic behavior submenu description →

Assign behavior of diagnostic no. 441 (Current output 1 to n)

Navigation	Expert → System → Diagnostic handling → Diagnostic behavior → Diagnostic no. 441
Description	Use this function to change the diagnostic behavior of the 441 Current output 1 to n diagnostic message.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ Alarm ▪ Warning ▪ Logbook entry only
Factory setting	Warning
Additional information	For a detailed description of the options available, refer to the Diagnostic behavior submenu description →

Assign behavior of diagnostic no. 444 (Current input 1 to n)

Navigation	Expert → System → Diagnostic handling → Diagnostic behavior → Diagnostic no. 444
Prerequisite	The device has one current input.
Description	Use this function to change the diagnostic behavior of the 444 Current input 1 to n diagnostic message.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ Alarm ▪ Warning ▪ Logbook entry only
Factory setting	Warning

Additional information For a detailed description of the options available: →  31

Diagnostic no. 905 (Validation failed)

Navigation   Expert → System → Diagnostic handling → Diagnostic behavior → Diagnostic no. 905

Description Use this function to change the diagnostic behavior of the **905 Validation failed** diagnostic message.

Selection

- Off
- Alarm
- Warning
- Logbook entry only
- Reset

Factory setting Warning

Additional information For a detailed description of the options available, refer to the [Diagnostic behavior submenu description](#) → .

3.1.4 Administration

Navigation   Expert → System → Administration

▶ Administration	→  26
Device reset	→  26
Transmitter identifier	→  27
Activate SW option	→  27
Software option overview	→  28
▶ Define access code	→  28
▶ Reset access code	→  29

Device reset

Navigation   Expert → System → Administration → Device reset

Description Reset the device configuration, either entirely or in part, to a defined state.

Selection

- Cancel
- Restart device

	<ul style="list-style-type: none"> ▪ To delivery settings ▪ Restore S-DAT backup¹
Factory setting	Cancel
Additional information	<p><i>Options</i></p> <ul style="list-style-type: none"> ▪ Cancel. No action is executed, and the user exits the parameter. ▪ Restart device. The restart resets every parameter with data stored in volatile memory (RAM) to the factory setting (e.g., measured value data). The device configuration remains unchanged. ▪ To delivery settings. Every parameter for which a customer-specific default setting was ordered is reset to the customer-specific value. All other parameters are reset to the factory setting. ▪ Restore S-DAT backup. Restores the data that is saved on the S-DAT. Additional information: This function can be used to resolve the memory issue "083 Memory content inconsistent" or to restore the S-DAT data when a new S-DAT has been installed. <ul style="list-style-type: none"> 🔒 This option is displayed only in an alarm condition.

Transmitter identifier

Navigation	🔍📄 Expert → System → Administration → Transmitter identifier
Description	Select transmitter identifier.
User interface	<ul style="list-style-type: none"> ▪ Unknown ▪ 500 ▪ 300
Factory setting	300

Activate SW option

Navigation	🔍📄 Expert → System → Administration → Activate SW option
Description	Use this function to enter an activation code to enable an additional, ordered software option.
User entry	Max. 10-digit string consisting of numbers.
Factory setting	Depends on the software option ordered
Additional information	<p><i>Description</i></p> <p>If a measuring device was ordered with an additional software option, the activation code is programmed in the device at the factory.</p> <p><i>User entry</i></p> <p>To activate a software option subsequently, please contact your Endress+Hauser sales organization.</p> <p>If an incorrect or invalid code is entered, this results in the loss of software options that have already been activated.</p> <ul style="list-style-type: none"> ▪ Before you enter a new activation code, make a note of the current activation code . ▪ Enter the new activation code provided by Endress+Hauser when the new software option was ordered.

¹ Visibility depends on order options or device settings

- Once the activation code has been entered, check if the new software option is displayed in the [Software option overview parameter](#) → .
 - ↳ The new software option is active if it is displayed.
 - ↳ If the new software option is not displayed or all software options have been deleted, the code entered was either incorrect or invalid.
- If the code entered is incorrect or invalid, enter the old activation code.
- Have your Endress+Hauser sales organization check the new activation code remembering to specify the serial number or ask for the code again.

Example for a software option

"Extended HistoROM"

The software options currently enabled are displayed in the [Software option overview parameter](#) → .

Web browser

Once a software option has been activated, the page must be loaded again in the Web browser.

NOTICE

- ▶ The activation code is linked to the serial number of the measuring device and varies according to the device and software option.

Software option overview

Navigation	  Expert → System → Administration → SW option overview
Description	Displays all the software options that are enabled in the device.
User interface	<ul style="list-style-type: none"> ▪ Extended HistoROM¹ ▪ Heartbeat Monitoring¹ ▪ Heartbeat Verification¹
Additional information	<p><i>Description</i></p> <p>Displays all the options that are available if ordered by the customer.</p>

Define access code wizard

The **Define access code** wizard is only available when operating via the local display or Web browser. If operating via the operating tool, the **Define access code** parameter can be found directly in the **Administration** submenu. There is no **Confirm access code** parameter if the device is operated via the operating tool.

Navigation  Expert → System → Administration → Define access code

¹ Visibility depends on order options or device settings

Define access code

Navigation Expert → System → Administration → Define access code → Define access code

Description Use this function to enter a user-specific release code to restrict write-access to the parameters. This protects the device configuration against any inadvertent modifications via the local display, Web browser, FieldCare or DeviceCare (via CDI-RJ45 service interface).

User entry Max. 16-digit character string comprising numbers, letters, and special characters.

Additional information
Description
 The write protection affects all parameters in the document marked with the symbol. On the local display, the symbol in front of a parameter indicates that the parameter is write-protected.
 The parameters that cannot be write-accessed are grayed out in the Web browser.

NOTICE

- ▶ Once the access code has been defined, write-protected parameters can only be modified if the access code is entered in the [Enter access code parameter](#) .
- ▶ If you lose the access code, please contact your Endress+Hauser sales organization.

User entry
 A message is displayed if the access code is not in the input range.

Factory setting
 If the factory setting is not changed or **0** is defined as the access code, the parameters are not write-protected and the device configuration data can be modified. The user is logged on in the **Maintenance** role.

Confirm access code

Navigation Expert → System → Administration → Define access code → Confirm code

Description Enter the defined release code a second time to confirm the release code.

User entry Max. 16-digit character string comprising numbers, letters, and special characters.

Reset access code submenu

Navigation Expert → System → Administration → Reset access code

Operating time

Navigation Expert → System → Administration → Reset access code → Operating time

Description Use this function to display the length of time the device has been in operation.

User interface Days (d), hours (h), minutes (m) and seconds (s)

Additional information	<i>User interface</i> The maximum number of days is 9999, which is equivalent to 27 years.
-------------------------------	---

Reset access code

Navigation	 Expert → System → Administration → Reset access code → Reset access code
Description	Use this function to enter a reset code to reset the user-specific access codes to the factory setting.
User entry	Character string comprising numbers, letters, and special characters.
Factory setting	0x00
Additional information	<p><i>Description</i> For a reset code, contact your Endress+Hauser service organization.</p> <p><i>User entry</i> The reset code can only be entered via:</p> <ul style="list-style-type: none"> ▪ Web browser ▪ Fieldbus

3.2 Sensor

Peak 1 index delta	→  34
Peak 2 index	→  34
Peak 2 index delta	→  34
Peak track index	→  34
Peak track index delta	→  34
Midpoint delta	→  34

Concentration

Navigation	  Expert → Sensor → Measured values → Measured variables → Concentration
Description	Displays the concentration of the analyte currently measured in the sample cell.
User interface	0 to 1000000 ppmv
Additional information	The unit is taken from the concentration unit parameter →  . Concentration refers to the amount of water vapor in gaseous phase within the gas sample to be measured.

Dew point 1

Navigation	  Expert → Sensor → Measured values → Measured variables → Dew point 1
Prerequisite	The Analyte type is moisture "H2O." In the Dew point method 1 parameter, the Off selection is not selected.
Description	Displays the moisture dew point temperature that is currently calculated.
User interface	Signed floating-point number
Additional information	The unit is taken from the temperature unit parameter →  . Dew point is the temperature at which moisture will start to condense into liquid for a given concentration and pressure. There are several industry accepted methods for moisture dew point calculation. See BA02152C →  for more details.

Dew point 2

Navigation	  Expert → Sensor → Measured values → Measured variables → Dew point 2
Prerequisite	The Analyte type is moisture "H2O". In the Dew point method 2 parameter, the Off selection is not selected.

Description	Displays the moisture dew point temperature that is currently calculated.
User interface	Signed floating-point number
Additional information	The unit is taken from the temperature unit parameter →  . Dew point is the temperature at which moisture will start to condense into liquid for a given concentration and pressure. There are several industry accepted methods for moisture dew point calculation. See BA02152C →  for more details.

Cell gas pressure

Navigation	  Expert → Sensor → Measured values → Measured variables → Cell gas pressure
Description	Displays the gas pressure currently measured in the sample cell.
User interface	0 to 1000000 ppmv
Additional information	The unit is taken from the pressure unit parameter →  . The current pressure of the sample cell during measurement.

Cell gas temperature

Navigation	  Expert → Sensor → Measured values → Measured variables → Cell gas temperature
Description	Displays the gas temperature currently measured in the sample cell.
User interface	Signed floating-point number
Additional information	The unit is taken from the temperature unit parameter →  . The current temperature of the sample cell during measurement.

Detector reference level

Navigation	  Expert → Sensor → Measured values → Measured variables → Detector reference level
Description	Displays the laser detector reference level currently measured.
User interface	0 to 5 mA
Additional information	The magnitude of the DC laser power. An out-of-range value can indicate the optics need to be cleaned or there is an alignment problem.

Detector zero level

Navigation	  Expert → Sensor → Measured values → Measured variables → Detector zero level
Description	Displays the laser detector zero level currently measured.
User interface	0 to 5 mA
Additional information	The DC laser power when the laser is turned off (e.g., dark current).

Peak 1 index

Navigation	  Expert → Sensor → Measured values → Measured variables → Peak 1 index
Description	Displays the absorption peak 1 index position in the currently measured 2f spectrum.
User interface	0.0 to 511.0
Additional information	Position of the absorption peak along the scan.

Peak 1 index delta

Navigation	  Expert → Sensor → Measured values → Measured variables → Peak 1 index delta
Description	Displays the difference in the peak 1 index position and the target index in the currently measured 2f spectrum.
User interface	-511.0 to 511.0

Peak 2 index

Navigation	  Expert → Sensor → Measured values → Measured variables → Peak 2 index
Prerequisite	The analyzer is calibrated for two peaks.
Description	Displays the absorption peak 2 index position in the currently measured 2f spectrum.
User interface	0.0 to 511.0
Additional information	Position of the secondary peak along the scan. Used for peak tracking purposes.

Peak 2 index delta

Navigation	  Expert → Sensor → Measured values → Measured variables → Peak 2 index delta
Prerequisite	The analyzer is calibrated for two peaks.
Description	Displays the difference in the peak 2 index position and the target index in the currently measured 2f spectrum.
User interface	-511.0 to 511.0

Peak track index

Navigation	  Expert → Sensor → Measured values → Measured variables → Peak track index
Description	Displays the peak track index for the peak used for peak tracking in the currently measured 2f spectrum.
User interface	0.0 to 511.0
Additional information	<i>Description</i> If Off is selected in the Peak tracking analyzer control parameter, this value will be zero. Otherwise, this value will mimic the parameter Peak 1 to n index depending on which peak is being used for peak tracking.

Peak track index delta

Navigation	🔍📄 Expert → Sensor → Measured values → Measured variables → Peak track index delta
Description	Displays the difference in the peak track index and the target index in the currently measured 2f spectrum.
User interface	-511.0 to 511.0
Additional information	<p><i>Description</i></p> <p>If Off is selected in the Peak tracking analyzer control parameter, this value will be zero. Otherwise, this value will mimic the parameter Peak 1 to n index delta depending on which peak is being used for peak tracking.</p>

Midpoint delta

Navigation	🔍📄 Expert → Sensor → Measured values → Measured variables → Midpoint delta
Description	Displays the difference in the calibrated midpoint value and the currently used midpoint value.
User interface	0.0 to 120.0 mA
Additional information	<p><i>Description</i></p> <p>If Off is selected in the Peak tracking analyzer control parameter, this value will be zero. Otherwise, this value will be the amount of change applied to the calibrated midpoint value by the peak tracking algorithm.</p>

Length unit 

Navigation   Expert → Sensor → System units → Length unit

Description Use this function to select the length unit for nominal diameter.

Selection

- m
- ft
- in
- mm
- μm

Factory setting m

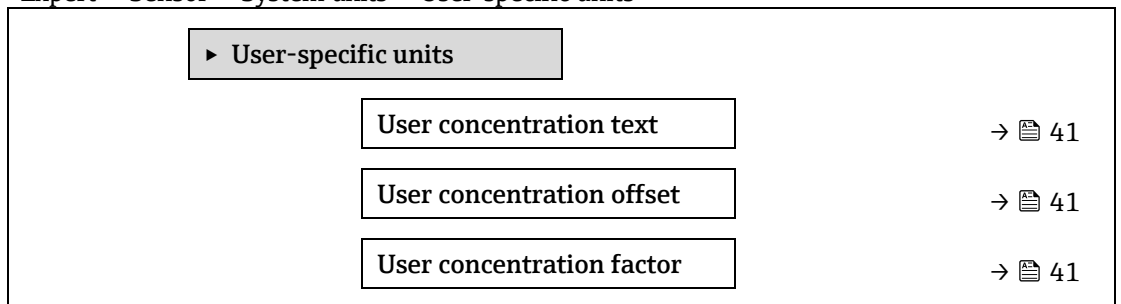

Additional information *Selection*
For an explanation of the abbreviated units, see [Approval specific factory settings → !\[\]\(9db214d549b9aeebe72aa11d3a5c4b1a_img.jpg\)](#).

Date/time format 

Navigation	  Expert → Sensor → System units → Date/time format
Description	Use this function to select the desired time format for calibration history.
Selection	<ul style="list-style-type: none"> ▪ dd.mm.yy hh:mm ▪ dd.mm.yy hh:mm am/pm ▪ mm/dd/yy hh:mm ▪ mm/dd/yy hh:mm am/pm
Factory setting	dd.mm.yy hh:mm
Additional information	<i>Selection</i> For an explanation of the abbreviated units, see Approval specific factory settings →  .

User-specific units submenu

Navigation   Expert → Sensor → System units → User-specific units

User concentration text

Navigation	  Expert → Sensor → System units → User-specific units → User concentration text
Description	Use this function to enter a text for the user-specific unit of concentration. The corresponding concentration units are generated automatically.
User entry	Max. 10 characters such as letters, numbers, or special characters (@, %, /)
Factory setting	User conc.
Additional information	<i>Result</i> The defined unit is shown as an option in the choose list of the concentration unit parameter →  . <i>Example</i> Enter text "ppmw" for parts per million by weight.

User concentration offset

Navigation	  Expert → Sensor → System units → User-specific units → User concentration offset
Description	Use this function to enter the zero-point shift for the user-specific concentration unit.
User entry	Signed floating-point number

Factory setting	0.0
Additional information	Value in user-specific unit = (factor × value in basic unit) + offset

User concentration factor

Navigation	  Expert → Sensor → System units → User-specific units → User concentration factor
Description	Use this function to enter a quantity factor for the user-specific concentration unit.
User entry	Signed floating-point number
Factory setting	1.0

3.2.3 Stream

Navigation   Expert → Sensor → Stream

▶ Stream

Analyte type	→  42
Select calibration	→  42
Rolling average number	→  42

Analyte type

Navigation	  Expert → Sensor → Stream → Analyte type
Description	Displays the analyte of interest the analyzer has been calibrated for.
User interface	<ul style="list-style-type: none"> ▪ H2O ▪ CO2 ▪ H2S ▪ CH4 ▪ NH3 ▪ HCl ▪ O2 ▪ CO ▪ SO2 ▪ C2H2

Select calibration

Navigation	  Expert → Sensor → Stream → Select calibration
Description	Select the calibration to use for measurement. The analyzer may have several calibrations to choose from.

Selection	<ul style="list-style-type: none"> ▪ 1 ▪ 2 ▪ 3 ▪ 4
Factory setting	1
Additional information	Some analyzers may be configured with multiple calibrations including a calibration for validation gas. Refer to the Calibration Reports provided with this shipment for information on the stream calibrations.

Rolling average number

Navigation	Expert → Sensor → Stream → Rolling average number
Description	Displays the number of concentration measurements included in the rolling average.
User interface	1 to 256

3.2.4 Dew point

Navigation Expert → Sensor → Dew point

▶ Dew point

Dew point method 1	→ 43
Dew point method 2	→ 43
Conversion type	→ 43
Pipeline pressure mode	→ 43
Pipeline pressure fixed	→ 44
Pipeline pressure	→ 44
▶ Calibration 1 to n	→ 45

Dew point method 1

Navigation	Expert → Sensor → Dew point → Dew point method 1
Description	Select the dew point temperature method to use for conversion from concentration and pressure.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ ASTM1 ▪ ASTM2 ▪ ISO ▪ AB
Factory setting	Off

Dew point method 2

Navigation	Expert → Sensor → Dew point → Dew point method 2
Description	Select the dew point temperature method to use for conversion from concentration and pressure.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ ASTM1 ▪ ASTM2 ▪ ISO ▪ AB
Factory setting	Off

Conversion type

Navigation	Expert → Sensor → Dew point → Conversion type
Description	Select to use ideal or real gas laws for the dew point method.
Selection	<ul style="list-style-type: none"> ▪ Ideal ▪ Real
Factory setting	Ideal

Pipeline pressure mode

Navigation	Expert → Sensor → Dew point → Pipeline pressure mode
Description	Select how the pipeline pressure will be input.
Selection	<ul style="list-style-type: none"> ▪ Fixed value ▪ External value
Factory setting	Fixed

Pipeline pressure fixed

Navigation	Expert → Sensor → Dew point → Pipeline pressure fixed
Description	Enter the fixed pipeline pressure value.
User entry	Signed floating-point number
Factory setting	0.0000 bar

Pipeline pressure external

Navigation	Expert → Sensor → Dew point → Pipeline pressure external
Description	Enter the external pipeline pressure value.
User entry	Signed floating-point number
Factory setting	0.0000 bar

Calibration 1 to n submenu

Navigation   Expert → Sensor → Dew point → Calibration 1 to n

► Calibration 1 to n	
Methane CH ₄	→  45
Ethane C ₂ H ₆	→  45
Propane C ₃ H ₈	→  45
IButane C ₄ H ₁₀	→  45
N-Butane C ₄ H ₁₀	→  45
Isopentane C ₅ H ₁₂	→  45
N-Pentane C ₅ H ₁₂	→  45
Neopentane C ₅ H ₁₂	→  45
Hexane+ C ₆ H ₁₄ +	→  45
Nitrogen N ₂	→  45
Carbon diox. CO ₂	→  45
Hydrog.sulf. H ₂ S	→  45
Hydrogen H ₂	→  45

Component (n)

Navigation   Expert → Sensor → Dew point → Calibration 1 to n → Component (n)

Description Describes the mole fraction of each background component within the gas stream.

 The term “mol” in the table below is an abbreviation for mole fraction.

Parameter	Description	User entry	Factory setting
Stream change compensation	Enables or disables the Stream Change Compensation feature.	<ul style="list-style-type: none"> ■ On ■ Off 	Off
Methane CH ₄	Sets the mole fraction of Methane in the dry gas mixture.	0.4 to 1.0 mol	0.75 mol
Ethane C ₂ H ₆	Sets the mole fraction of Ethane in the dry gas mixture.	0.0 to 0.2 mol	0.1 mol
Propane C ₃ H ₈	Sets the mole fraction of Propane in the dry gas mixture.	0.0 to 0.15 mol	0.05 mol
IButane C ₄ H ₁₀	Sets the mole fraction of Ibutane in the dry gas mixture.	0.0 to 0.1 mol	0 mol

Parameter	Description	User entry	Factory setting
N-Butane C ₄ H ₁₀	Sets the mole fraction of N-Butane in the dry gas mixture.	0.0 to 0.1 mol	0 mol
Isopentane C ₅ H ₁₂	Sets the mole fraction of Isopentane in the dry gas mixture.	0.0 to 0.1 mol	0 mol
N-Pentane C ₅ H ₁₂	Sets the mole fraction of N-Pentane in the dry gas mixture	0.0 to 0.1 mol	0 mol
Neopentane C ₅ H ₁₂	Sets the mole fraction of Neopentane in the dry gas mixture	0.0 to 0.1 mol	0 mol
Hexane+ C ₆ H ₁₄ +	Sets the mole fraction of Hexane+ in the dry gas mixture	0.0 to 0.1 mol	0 mol
Nitrogen N ₂	Sets the mole fraction of Nitrogen in the dry gas mixture.	0.0 to 0.55 mol	0 mol
Carbon dioxide CO ₂	Sets the mole fraction of Carbon dioxide in the dry gas mixture.	0.0 to 0.3 mol	0.1 mol
Hydrogen sulfide H ₂ S	Sets the mole fraction of Hydrogen sulfide in the dry gas mixture.	0.0 to 0.05 mol	0 mol
Hydrogen H ₂	Sets the mole fraction of Hydrogen in the dry gas mixture.	0.0 to 0.2 mol	0 mol

User entry Positive floating-point value (reference each component in above table).

Factory setting Refer to table.

Additional information The mole fraction of each background component should add up to 1.

3.2.5 Peak tracking

Navigation   Expert → Sensor → Peak tracking

► Peak tracking	
Peak track analyzer control	→  46
Peak track reset	→  46
Peak track average number	→  46

Peak track analyzer control

Navigation   Expert → Sensor → Peak tracking → Peak track analyzer control

Description Switch peak track on or off for the analyzer. There are separate peak track settings for each calibration. Normal operation peak tracking should be on.

- Selection**
 - Off
 - On
- Factory setting** Off

Peak track reset

- Navigation**   Expert → Sensor → Peak tracking → Peak track reset
- Description** Reset analyzer peak midpoint current value to original calibrated peak location.
- Selection**
 - Off
 - Reset
- Factory setting** Off

Peak track average number

- Navigation**   Expert → Sensor → Peak tracking → Peak track average number
- Description** Average number of peak index measurements used for peak tracking.
- User entry** 1 to 3600
- Factory setting** 60

3.2.6 Sensor adjustment

Navigation   Expert → Sensor → Sensor adjustment

▶ Sensor adjustment

Concentration adjust	→  47
Conc. multiplier	→  47
Concentration offset (RATA)	→  47
2f base crv source	→  47
2f base RT update	→  49
Calibration 1 to n	→  48

Concentration adjust

- Navigation**   Expert → Sensor → Sensor adjustment → Concentration adjust
- Description** Switch concentration adjustment feature (e.g., concentration multiplier and offset) on or off.
- Selection**
 - On
 - Off

Factory setting	Off
Additional information	Allows user definable adjustment of the analyzer reading without affecting factory calibration.

Conc. multiplier

Navigation	  Expert → Sensor → Sensor adjustment → Conc. multiplier
Description	Set the value that the concentration is multiplied by when concentration adjustment is turned on.
User interface	Signed floating-point number
Factory setting	1.0000

Concentration offset (RATA)

Navigation	  Expert → Sensor → Sensor adjustment → Concentration offset (RATA)
Description	Set the value added (i.e., offset) to the concentration when concentration adjustment is turned on.
User interface	Signed floating-point number
Factory setting	0.0000 ppmv

2f base curve source

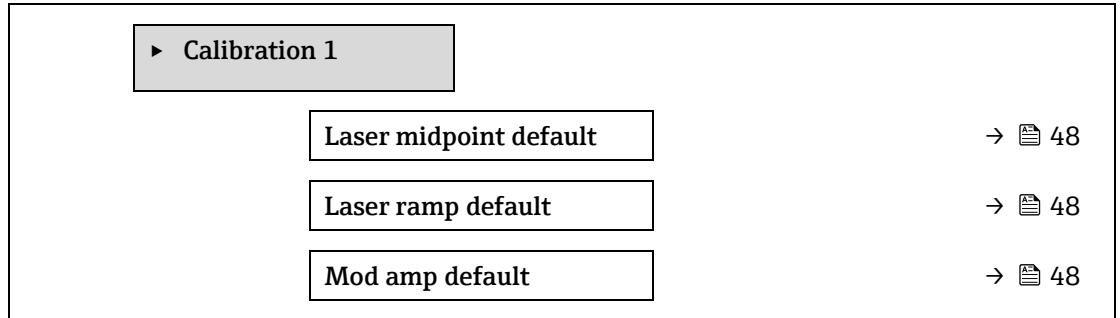

Navigation	  Expert → Sensor → Sensor adjustment → 2f base curve source
Description	Select source for base curve (i.e., Ref0 from factory or Ref0 from last RT update) used in measurement calculations.
Selection	<ul style="list-style-type: none"> ▪ Ref0 curve ▪ Ref0 RT curve
Factory setting	Ref0 curve

2f base RT update

Navigation	  Expert → Sensor → Sensor adjustment → 2f base curve source
Description	When Ref0 RT curve is selected, start will initiate saving the RT (Real Time) base curve data for measurement calculations.
Selection	<ul style="list-style-type: none"> ▪ Cancel ▪ Start
Factory setting	Ref0 curve

Calibration 1 to n submenu

Navigation   Expert → Sensor → Sensor adjustment → Calibration 1 to n

Laser midpoint default

Navigation   Expert → Sensor → Sensor adjustment → Calibration 1 to n → Laser midpoint default

Description Displays factory calibrated midpoint for each calibration stream.

User interface 0 to 120 mA

Additional information This value serves as a starting point for midpoint delta to optimized peak position.

Laser ramp default

Navigation   Expert → Sensor → Sensor adjustment → Calibration 1 to n → Laser ramp default

Description Displays factory calibrated ramp for each calibration stream.

User interface 0 to 120 mA

Additional information Laser ramp represents the scan width of the spectrum.

Laser modulation amplitude default

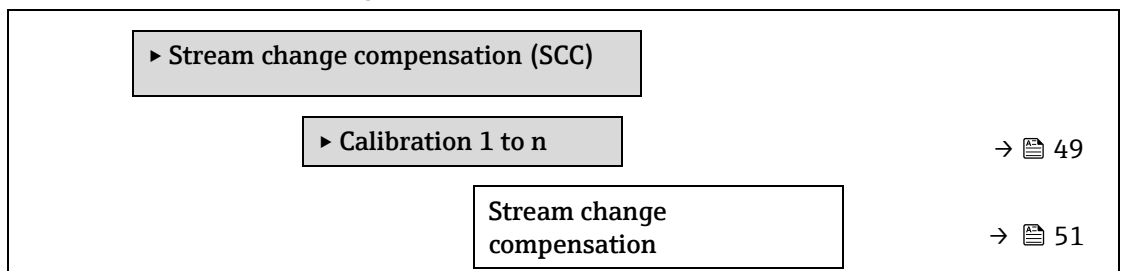

Navigation   Expert → Sensor → Sensor adjustment → Calibration 1 to n → Mod amp default

Description Modulation amplitude setting to optimize peak performance.

User interface 0 to 100 mA

3.2.7 Stream change compensation

Navigation   Expert → Sensor → Stream change compensation

Methane CH ₄	→  51
Ethane C ₂ H ₆	→  51
Propane C ₃ H ₈	→  51
iButane C ₄ H ₁₀	→  51
N-Butane C ₄ H ₁₀	→  51
Isopentane C ₅ H ₁₂	→  51
N-Pentane C ₅ H ₁₂	→  51
Neopentane C ₅ H ₁₂	→  51
Hexane+ C ₆ H ₁₄ +	→  51
Nitrogen N ₂	→  51
Carbon diox. CO ₂	→  51
Hydrog.sulf. H ₂ S	→  51
Hydrogen H ₂	→  51

Calibration 1 to n → Stream change compensation

Navigation	  Expert → Sensor → Stream change compensation → Calibration 1 to n → Stream change compensation
Description	Switch on to allow concentration measurement compensation based on gas background composition values. Values can be static or live.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ On
Factory setting	Off

Component (n)

Navigation	  Expert → Sensor → Stream change compensation → Calibration 1 to n → Component (n)
Description	These values define the gas background values. They are shared with the dew point.
User entry	Signed floating-point number, mole fraction
Factory setting	Gas background dependent. Refer to dew point calibration components →  .

3.2.8 Calibration

Navigation   Expert → Sensor → Calibration

<div style="border: 1px solid black; padding: 5px; margin-bottom: 10px;"> ▶ Calibration </div>	
Det. 1 TIA gain	→  51
Detector bias	→  51
Flow switch input	→  51
Flow switch state	→  51

Det. 1 TIA gain

Navigation   Expert → Sensor → Calibration → Det. 1 TIA gain

Description Transimpedance amplifier (TIA) gain setting

Selection 0 to 15

Detector bias

Navigation   Expert → Sensor → Calibration → Detector bias

Description Bias voltage used to run the optical detector.

Selection Signed floating-point number

Flow switch input

Navigation   Expert → Sensor → Calibration → Flow switch input

Description Discrete input from flow switch to signal flow / no-flow of sample gas.

Selection

- Normally Open
- Normally Closed
- Off

Flow switch state

Navigation   Expert → Sensor → Calibration → Flow switch state

Description Displays current status of flow switch.

Selection

- No Flow
- Flow

3.3 I/O configuration

Navigation  Expert → I/O configuration

▶ I/O configuration	
I/O module 1 to n terminal numbers	→  52
I/O module 1 to n information	→  52
I/O module 1 to n type	→  52
Apply I/O configuration	→  53
I/O alteration code	→  53

I/O module 1 to n terminal numbers

Navigation  Expert → I/O configuration → I/O module 1 to n terminals

Description Displays the terminal numbers used by the I/O module.

User interface

- Not used
- 26-27 (I/O 1)
- 24-25 (I/O 2)
- 22-23 (I/O 3)

I/O module 1 to n information

Navigation  Expert → I/O configuration → I/O module 1 to n information

Description Displays information about the plugged in I/O module.

User interface

- Not plugged
- Invalid
- Not configurable
- Configurable
- MODBUS

Additional information

- **Not plugged.** The I/O module is not plugged in.
- **Invalid.** The I/O module is not plugged correctly.
- **Not configurable.** The I/O module is not configurable.
- **Configurable.** The I/O module is configurable.
- **MODBUS.** The I/O module is configured for Modbus.

I/O module 1 to n type

Navigation  Expert → I/O configuration → I/O module 1 to n type

Prerequisite Must have I/O Module installed. For the following order code:

- “Output; input 2,” “Configurable I/O initial setting off”
- “Output; input 3,” “Configurable I/O initial setting off”

Description	Use this function to select the I/O module type for the configuration of the I/O module.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ Current output ¹ ▪ Current input ¹ ▪ Switch output ¹ ▪ Relay output ¹
Factory setting	Off

Apply I/O configuration

Navigation	  Expert → I/O configuration → Apply I/O configuration
Description	Use this function to activate the newly configured I/O module type.
Selection	<ul style="list-style-type: none"> ▪ No ▪ Yes
Factory setting	No

I/O alteration code

Navigation	  Expert → I/O configuration → I/O alteration code
Description	Activates configuration for each I/O.
User entry	Positive integer
Factory setting	Device specific
Additional information	<p><i>Description</i></p> <p>The I/O configuration is changed in the I/O module type parameter → .</p>

¹ Visibility depends on order options or device settings

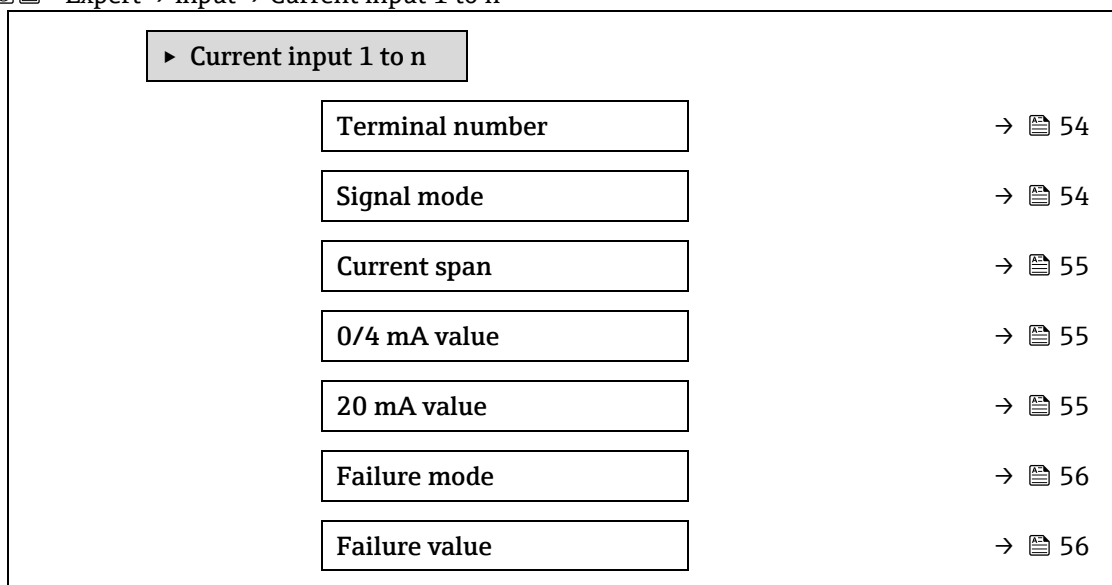

3.4 Input

Navigation  Expert → Input

3.4.1 Current input 1 to n

Navigation  Expert → Input → Current input 1 to n

Terminal number

Navigation  Expert → Input → Current input 1 to n → Terminal number

Description Displays the terminal numbers used by the current input module.

User interface

- Not used
- 24-25 (I/O 2)
- 22-23 (I/O 3)

Additional information *"Not used" option*
The current input module does not use any terminal numbers.

Signal mode

Navigation  Expert → Input → Current input 1 to n → Signal mode

Description Use this function to select the signal mode for the current input.

User interface

- Passive
- Active

Additional information Active

Current span

Navigation	Expert → Input → Current input 1 to n → Current span
Description	Use this function to select the current range for the process value output and the upper and lower level for signal on alarm.
Selection	<ul style="list-style-type: none"> ▪ 0-20 mA ▪ 4-20 mA NAMUR ▪ 4-20 mA US ▪ FIXED CURRENT
Factory setting	Approval-specific: <ul style="list-style-type: none"> ▪ 4 to 20 mA NAMUR (3.8 to 20.5 mA) ▪ 4 to 20 mA US (3.9 to 20.8 mA)
Additional information	Sample values for the current range: Current range output → .

0/4 mA value

Navigation	Expert → Input → Current input 1 to n → 0/4 mA value
Description	Use this function to enter a value for the 4 mA current.
Selection	Signed floating-point number
Factory setting	0
Additional information	<p><i>Current input behavior</i></p> <p>The current input behaves differently depending on the settings configured in the following parameters:</p> <ul style="list-style-type: none"> ▪ Current span → ▪ Failure mode → <p><i>Configuration examples</i></p> <p>Pay attention to the configuration examples for 4 mA value parameter → .</p>

20 mA value

Navigation	Expert → Input → Current input 1 to n → 20 mA value
Description	Use this function to enter a value for the 20 mA current.
User entry	Signed floating-point number
Factory setting	Depends on country and factory calibration
Additional information	<p><i>Configuration examples</i></p> <p>Pay attention to the configuration examples for the 4 mA value parameter → .</p>

Failure mode

Navigation	  Expert → Input → Current input 1 to n → Failure mode
Description	Use this function to select the input behavior when measuring a current outside the configured Current span parameter →  .
Selection	<ul style="list-style-type: none"> ▪ Alarm ▪ Last valid value ▪ Defined value
Factory setting	Alarm
Additional information	<p><i>Options</i></p> <ul style="list-style-type: none"> ▪ Alarm. An error message is set. ▪ Last valid value. The last valid measured value is used. ▪ Defined value. The Failure value parameter → .

Failure value

Navigation	  Expert → Input → Current input 1 to n → Failure value
Prerequisite	In the Failure mode parameter →  the Defined value option is selected.
Description	Use this function to enter the value that the device uses if it does not receive an input signal from the external device, or if the input signal is invalid.
User entry	Signed floating-point number
Factory setting	0

3.5 Output

Navigation  Expert → Output

▶ Output	
▶ Current output 1 to n	→  57
▶ Switch output 1 to n	→  62
▶ Relay output 1 to n	→  67

3.5.1 Current output 1 to n

Navigation  Expert → Output → Current output 1 to n

▶ Current output 1 to n	
Terminal number	→  57
Signal mode	→  63
Process variable current output	→  63
Current range out	→  63
Fixed current	→  59
Lower range value outp	→  59
Upper range value outp	→  60
Damping current output	→  60
Failure behavior current output	→  61
Failure current	→  61
Output current 1 to n	→  61
Measured current 1 to n	→  61

Terminal number

Navigation  Expert → Output → Current output 1 to n → Terminal number

Description Displays the terminal numbers used by the current output module.

- User interface
- Not used
 - 24-25 (I/O 2)
 - 22-23 (I/O 3)

Additional information *"Not used" option*
The current output module does not use any terminal numbers.

Signal mode

Navigation   Expert → Output → Current output 1 to n → Signal mode

Description Use this function to select the signal mode for the current output.

Selection

- Active
- Passive

Factory setting Active

Process variable current output

Navigation   Expert → Output → Current output 1 to n → Process variable current output

Description Use this function to select a process variable for the current output.

Selection

- Off
- Concentration
- Dew Point 1
- Dew Point 2
- Cell Gas Temperature

Current range output

Navigation   Expert → Output → Current output 1 to n → Current range output

Description Select current range for process value output and upper/lower level for alarm signal.

Selection

- 0-20 mA
- 4-20 mA NAMUR
- 4-20 mA US
- FIXED CURRENT

Factory setting Approval specific:

- 4...20 mA NAMUR (3.8. 20.5 mA)
- 4...20 mA US (3.9. 20.8 mA)

Additional information *Description*

- In the event of a device alarm, the current output adopts the value specified in the [Failure mode parameter](#) → .
- If the measured value is outside the measuring range, the **△S441 Current output 1 to n** diagnostic message is displayed.
- The measuring range is specified via the [Lower range value output parameter](#) →  and [Upper range value output parameter](#) → .

"Fixed current" option

The current value is set via the [Fixed current parameter](#) → .

Example

Shows the relationship between the current range for the output of the process value and the two signal on alarm levels:

A0034351

1. Current range for process value
2. Lower level for signal on alarm
3. Upper level for signal on alarm

Selection	1	2	3
4...20 mA NAMUR (3.8...20.5 mA)	3.8 to 20.5 mA	< 3.6 mA	> 21.95 mA
4...20 mA US (3.9...20.8 mA)	3.9 to 20.8 mA US	< 3.6 mA	> 21.95 mA
4...20 mA (4...20.5 mA)	4 to 20.5 mA	< 3.6 mA	> 21.95 mA
0...20 mA (0...20.5 mA)	0 to 20.5 mA	0 mA	> 21.95 mA

If the measurement exceeds or falls below the upper or lower signal on alarm level, the **△S441 Current output 1 to n** diagnostic message is displayed.

Fixed Current

Navigation Expert → Output → Current output 1 to n → Fixed current

Prerequisite The **Fixed current** option is selected in the [Current range output parameter](#) → .

Description Use this function to enter a constant current value for the current output.

User entry 0 to 22.5 mA

Factory setting 22.5 mA

Lower range value output

Navigation Expert → Output → Current output 1 to n → Lower range output

Prerequisite One of the following options is selected in the [Current range output parameter](#) → :

- 0-20 mA
- 4-20 mA NAMUR
- 4-20 mA US
- FIXED CURRENT

Description Use this function to enter a value for the start of measuring range.

User entry Signed non-negative floating-point number

Factory setting 0 ppmv

Additional information *Dependency*
The unit depends on the process variable selected in the [Assign current output parameter](#) → .

Current output behavior

The current output behaves differently depending on the settings configured in the following parameters:

- [Current span →](#) 
- [Failure mode →](#) 

Upper range value output 

Navigation	  Expert → Output → Current output 1 to n → Upper range output
Prerequisite	One of the following options is selected in the Current range output →  : <ul style="list-style-type: none"> ▪ 0-20 mA ▪ 4-20 mA NAMUR ▪ 4-20 mA US ▪ FIXED CURRENT
Description	Use this function to enter a value for the end of measuring range.
User entry	Signed positive floating-point number
Factory setting	Calibration dependent (remove link)
Additional information	<i>Dependency</i> The unit depends on the process variable selected in the Assign current output parameter →  .

Damping current output 

Navigation	  Expert → Output → Current output 1 to n → Damping current output
Prerequisite	A process variable is selected in the Assign current output parameter →  and one of the following options is selected in the Current range output →  : <ul style="list-style-type: none"> ▪ 0-20 mA ▪ 4-20 mA NAMUR ▪ 4-20 mA US ▪ FIXED CURRENT
Description	Use this function to enter a time constant for the reaction time of the current output signal to fluctuations in the measured value caused by process conditions.
User entry	0.0 to 999.9 s
Factory setting	1.0 s
Additional information	Use this function to enter a time constant (PT1 element ¹) for current output damping: <ul style="list-style-type: none"> ▪ If a low time constant is entered, the current output reacts particularly quickly to fluctuating measured variables. ▪ On the other hand, the current output reacts more slowly if a high time constant is entered. Damping is switched off if 0 is entered (factory setting).

¹ Proportional transmission behavior with first order delay

Failure behavior current output

Navigation	Expert → Output → Current output 1 to n → Failure behavior output
Prerequisite	A process variable is selected in the Assign current output parameter → and one of the following options is selected in the Current range output → : <ul style="list-style-type: none"> ▪ 0-20 mA ▪ 4-20 mA NAMUR ▪ 4-20 mA US ▪ FIXED CURRENT
Description	Use this function to select the value of the current output in the event of a device alarm.
Selection	<ul style="list-style-type: none"> ▪ Min. ▪ Max. ▪ Last valid value ▪ Actual value ▪ Fixed value
Factory setting	Max.
Additional information	<p><i>Description</i></p> <p>This setting does not affect the failsafe mode of other outputs. This is specified in separate parameters.</p> <p><i>"Min." option</i></p> <p>The current output adopts the value of the lower level for signal on alarm. The signal on alarm level is defined via the Current range output → .</p> <p><i>"Max." option</i></p> <p>The current output adopts the value of the upper level for signal on alarm. The signal on alarm level is defined via the Current range output → .</p> <p><i>"Last valid value" option</i></p> <p>The current output adopts the last measured value that was valid before the device alarm occurred.</p> <p><i>"Actual value" option</i></p> <p>The current output adopts the measured value based on the current measurement; the device alarm is ignored.</p> <p><i>"Defined value" option</i></p> <p>The current output adopts a defined measured value. The measured value is defined via the Failure current parameter → .</p>

Failure current

Navigation	Expert → Output → Current output 1 to n → Failure current
Prerequisite	The Defined value option is selected in the Failure mode parameter → .
Description	Use this function to enter a fixed value that the current output adopts in the event of a device alarm.

User entry 0 to 22.5 mA

Factory setting 22.5 mA

Output current 1 to n

Navigation   Expert → Output → Current output 1 to n → Output current 1 to n

Description Displays the current value currently calculated for the current output.

User interface 0 to 22.5 mA

Measured current 1 to n

Navigation   Expert → Output → Current output 1 to n → Measured current 1 to n

Description Displays the actual measured value of the output current.

User interface 0 to 30 mA

3.5.2 Switch output 1

Navigation   Expert → Output → Switch output 1 to n

▶ Switch output 1 to n	
Signal mode	→  63
Operating mode	→  63
Switch out funct	→  63
Assign diagnostic behavior	→  63
Assign limit	→  64
Switch-on value	→  64
Switch-off value	→  65
Assign status	→  65
Switch-on delay	→  65
Switch-off delay	→  65
Switch state	→  65
Invert output signal	→  65

Signal mode

Navigation	Expert → Output → Switch output 1 to n → Signal mode
Description	Use this function to select the signal mode for the switch output.
Selection	<ul style="list-style-type: none"> ▪ Passive ▪ Passive NAMUR
Additional information	<ul style="list-style-type: none"> ▪ Passive ▪ Active

Operating mode

Navigation	Expert → Output → Switch output 1 to n → Operating mode
Description	Displays the operating mode of the output.
Selection	Switch
Factory setting	Switch

Switch output function

Navigation	Expert → Output → Switch output 1 to n → Switch out function
Prerequisite	The Switch option is selected in the Operating mode parameter → .
Description	Use this function to select a function for the switch output.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ On ▪ Diagnostic behavior ▪ Limit ▪ Status
Factory setting	Off
Additional information	<p><i>Selection</i></p> <ul style="list-style-type: none"> ▪ Off. The switch output is permanently switched off (open, non-conductive). ▪ On. The switch output is permanently switched on (closed, conductive). ▪ Diagnostic behavior. Indicates if the diagnostic event is present or not. Is used to output diagnostic information and to react to it appropriately at the system level. ▪ Limit. Indicates if a specified limit value has been reached for the process variable. Is used to output diagnostic information relating to the process and to react to it appropriately at the system level. ▪ Status. Displays the device status when validation control is selected.

Assign diagnostic behavior

Navigation	Expert → Output → Switch output 1 to n → Assign diagnostic behavior
Prerequisite	<ul style="list-style-type: none"> ▪ In the Operating mode parameter → , the Switch option is selected. ▪ In the Switch output function parameter → , the Diagnostic behavior option is selected.

Description	Use this function to select the diagnostic event category that is displayed for the switch output.
Selection	<ul style="list-style-type: none"> ▪ Alarm ▪ Alarm or warning ▪ Warning
Factory setting	Alarm
Additional information	<p><i>Description</i></p> <p>If no diagnostic event is pending, the switch output is closed and conductive.</p> <p><i>Selection</i></p> <ul style="list-style-type: none"> ▪ Alarm. The switch output signals only diagnostic events in the alarm category. ▪ Alarm or warning. The switch output signals diagnostic events in the alarm and warning category. ▪ Warning. The switch output signals only diagnostic events in the warning category.

Assign limit

Navigation	  Expert → Output → Switch output 1 to n → Assign limit
Prerequisite	<ul style="list-style-type: none"> ▪ In the Operating mode parameter → , the Switch option is selected. ▪ In the Switch output function parameter → , the Limit option is selected.
Description	Use this function to select a process variable for the limit function.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ Concentration ▪ Dew Point 1 ▪ Dew Point 2
Factory setting	Concentration

Switch-on value

Navigation	  Expert → Output → Switch output 1 to n → Switch-on value
Prerequisite	<ul style="list-style-type: none"> ▪ The Switch option is selected in the Operating mode parameter → . ▪ The Limit option is selected in the Switch output function parameter → .
Description	Use this function to enter the measured value for the switch-on point.
Selection	Signed floating-point number
Factory setting	0 ppmv
Additional information	<p><i>Description</i></p> <p>Use this function to enter the limit value for the switch-on value (process variable > switch-on value = closed, conductive).</p> <p>When using a hysteresis: Switch-on value > Switch-off value.</p> <p><i>Dependency</i></p> <p>The unit depends on the process variable selected in the Assign limit parameter (→  139).</p>

Switch-off value

Navigation	Expert → Output → Switch output 1 to n → Switch-off value
Prerequisite	<ul style="list-style-type: none"> ▪ The Switch option is selected in the Operating mode parameter → . ▪ The Limit option is selected in the Switch output function parameter → .
Description	Use this function to enter the measured value for the switch-off point.
User entry	Signed floating-point number
Factory setting	0 ppmv
Additional information	<p><i>Description</i></p> <p>Use this function to enter the limit value for the switch-off value (process variable < switch-off value = open, non-conductive).</p> <p>When using a hysteresis: Switch-on value > Switch-off value.</p> <p><i>Dependency</i></p> <p>The unit depends on the process variable selected in the Assign limit parameter (→ 139).</p>

Assign status

Navigation	Expert → Output → Switch output 1 to n → Assign status
Prerequisite	<ul style="list-style-type: none"> ▪ The Switch option is selected in the Operating mode parameter → . ▪ The Status option is selected in the Switch output function parameter → .
Description	Use this function to select a device status for the switch output.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ Validation Control
Factory setting	Off

Switch-on delay

Navigation	Expert → Output → Switch output 1 to n → Switch-on delay
Prerequisite	<ul style="list-style-type: none"> ▪ The Switch option is selected in the Operating mode parameter → . ▪ The Limit option is selected in the Switch output function parameter → .
Description	Use this function to enter a delay time for switching on the switch output.
User entry	0.0 to 100.0 s
Factory setting	0.0 s

Switch-off delay

Navigation	Expert → Output → Switch output 1 to n → Switch-off delay
Prerequisite	<ul style="list-style-type: none"> ▪ The Switch option is selected in the Operating mode parameter → . ▪ The Limit option is selected in the Switch output function parameter → .
Description	Use this function to enter a delay time for switching off the switch output.

User entry 0.0 to 100.0 s

Factory setting 0.0 s

Switch state

Navigation  Expert → Output → Switch output 1 to n → Switch state

Prerequisite The **Switch** option is selected in the [Operating mode parameter](#) → .

Description Displays the current switch status of the status output.

Selection

- Open
- Closed

Additional information *User interface*

- **Open.** The switch output is not conductive.
- **Closed.** The switch output is conductive.

Invert output signal

Navigation  Expert → Output → Switch output 1 to n → Invert output signal

Description Use this function to select whether to invert the output signal.

Selection

- No
- Yes

Factory setting No

Additional information *Selection*
No option (passive - negative)

A0026693

Yes option (passive - positive)

A0026692

3.5.3 Relay output 1 to n

Navigation  Expert → Output → Relay output 1 to n

▶ Relay output 1 to n

Relay output function	→  67
Assign limit	→  68
Assign diag. behavior	→  68
Assign status	→  68
Switch-off value	→  68
Switch-off delay	→  68
Switch-on value	→  70
Switch-on delay	→  70
Switch state	→  70
Powerless relay status	→  70

Relay output function

Navigation  Expert → Output → Relay output 1 to n → Relay output function

Description Use this function to select an output function for the relay output.

- User interface**
- Closed
 - Open
 - Diagnostic behavior
 - Limit
 - Status

Factory setting Closed

- Additional information**
- Selection*
- **Closed.** The relay output is permanently switched on (closed, conductive).
 - **Open.** The relay output is permanently switched off (open, non-conductive).
 - **Diagnostic behavior.** Indicates if the diagnostic event is present or not. Is used to output diagnostic information and to react to it appropriately at the system level.
 - **Limit.** Indicates if a specified limit value has been reached for the process variable. Is used to output diagnostic information relating to the process and to react to it appropriately at the system level.
 - **Status.** Displays the device status when validation control is selected.

Assign limit

Navigation	Expert → Output → Relay output 1 to n → Assign limit
Prerequisite	The Limit option is selected in the Relay output function parameter → .
Description	Use this function to select a process variable for the limit value function.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ Concentration ▪ Dew Point 1 ▪ Dew Point 2
Factory setting	Off

Assign diagnostic behavior

Navigation	Expert → Output → Relay output 1 to n → Assign diagnostic behavior
Prerequisite	In the Relay output function parameter → , the Diagnostic behavior option is selected.
Description	Use this function to select the category of the diagnostic events that are displayed for the relay output.
Selection	<ul style="list-style-type: none"> ▪ Alarm ▪ Alarm or warning ▪ Warning
Factory setting	Alarm
Additional information	<p><i>Description</i></p> <p>If no diagnostic event is pending, the relay output is closed and conductive.</p> <p><i>Selection</i></p> <ul style="list-style-type: none"> ▪ Alarm. The relay output signals only diagnostic events in the alarm category. ▪ Alarm or warning. The relay output signals diagnostic events in the alarm and warning category. ▪ Warning. The relay output signals only diagnostic events in the warning category.

Assign status

Navigation	Expert → Output → Relay output 1 to n → Assign status
Prerequisite	In the Relay output function parameter → , the Digital Output option is selected.
Description	Use this function to select the device status for the relay output.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ Validation Control
Factory setting	Off

Switch-off value

Navigation	Expert → Output → Relay output 1 to n → Switch-off value
Prerequisite	In the Relay output function parameter → , the Limit option is selected.
Description	Use this function to enter the measured value for the switch-off point.
User entry	Signed floating-point number
Factory setting	0 ppmv
Additional information	<p><i>Description</i></p> <p>Use this function to enter the limit value for the switch-off value (process variable < switch-off value = open, non-conductive). When using a hysteresis: Switch-on value > Switch-off value.</p> <p><i>Dependency</i></p> <p>The unit is dependent on the process variable selected in the Assign limit parameter (→ 146).</p>

Switch-off delay

Navigation	Expert → Output → Relay output 1 to n → Switch-off delay
Prerequisite	In the Relay output function parameter → , the Limit option is selected.
Description	Use this function to enter a delay time for switching off the switch output
Selection	0.0 to 100.0 s
Factory setting	0.0 s

Switch-on value

Navigation	Expert → Output → Relay output 1 to n → Switch-on value
Prerequisite	The Limit option is selected in the Relay output function parameter → .
Description	Use this function to enter the measured value for the switch-on point.
User entry	Signed floating-point number
Selection	<ul style="list-style-type: none"> ▪ Off ▪ Validation Control
Additional information	<p><i>Description</i></p> <p>Use this function to enter the limit value for the switch-on value (process variable > switch-on value = closed, conductive). When using a hysteresis: Switch-on value > Switch-off value.</p> <p><i>Dependency</i></p> <p>The unit is dependent on the process variable selected in the Assign limit parameter (→ 146).</p>

Switch-on delay

Navigation	Expert → Output → Relay output 1 to n → Switch-on delay (0814-1 to n)
Prerequisite	In the Relay output function parameter → , the Limit option is selected.
Description	Use this function to enter a delay time for switching on the switch output.
User entry	0.0 to 100.0 s
Factory setting	0.0 s

Switch state

Navigation	Expert → Output → Relay output 1 to n → Switch state
Description	Displays the current status of the relay output.
User interface	<ul style="list-style-type: none"> ▪ Open ▪ Closed
Additional information	<p><i>User interface</i></p> <ul style="list-style-type: none"> ▪ Open. The relay output is not conductive. ▪ Closed. The relay output is conductive.

Powerless relay status

Navigation	Expert → Output → Relay output 1 to n → Powerless relay
Description	Use this function to select the quiescent state for the relay output.
Selection	<ul style="list-style-type: none"> ▪ Open ▪ Closed
Factory setting	Open
Additional information	<p><i>Selection</i></p> <ul style="list-style-type: none"> ▪ Open. The relay output is not conductive. ▪ Closed. The relay output is conductive.

3.6 Communication

Navigation  Expert → Communication

▶ Communication	→  71
▶ Modbus configuration	→  71
▶ Modbus information	→  76
▶ Modbus data map	→  77
▶ Web server	→  77

3.6.1 Modbus configuration

Navigation Expert → Communication → Modbus configuration

▶ Modbus configuration	
Bus address	→  71
Baudrate	→  72
Data transfer mode	→  72
Parity	→  72
Byte order	→  73
Telegram delay	→  74
Priority IP address	→  74
Inactivity timeout	→  74
Max connections	→  74
Failure mode	→  75
Bus termination	→  75
Fieldbus writing access	→  75

Bus address

Navigation   Expert → Communication → Modbus configuration → Bus address

Prerequisite Modbus RS485 Device

Description Use this function to enter the device address.

User entry	1 to 247
Factory setting	247

Baudrate

Navigation	Expert → Communication → Modbus configuration → Baudrate
Prerequisite	Modbus RS485 Device
Description	Use this function to select a transmission rate.
User entry	<ul style="list-style-type: none"> ▪ 1200 BAUD ▪ 2400 BAUD ▪ 4800 BAUD ▪ 9600 BAUD ▪ 19200 BAUD ▪ 38400 BAUD ▪ 57600 BAUD ▪ 115200 BAUD
Factory setting	19200 BAUD

Data transfer mode

Navigation	Expert → Communication → Modbus configuration → Data transfer mode
Prerequisite	Modbus RS485 Device
Description	Use this function to select the data transmission mode.
Selection	<ul style="list-style-type: none"> ▪ ASCII ▪ RTU
Factory setting	RTU
Additional information	<p><i>Options</i></p> <ul style="list-style-type: none"> ▪ ASCII. Transmission of data in the form of readable ASCII characters. Error protection via LRC. ▪ RTU. Transmission of data in binary form. Error protection via CRC16.

Parity

Navigation	Expert → Communication → Modbus configuration → Parity
Prerequisite	Modbus RS485 Device
Description	Use this function to select the parity bit.
Selection	<ul style="list-style-type: none"> ▪ Odd ▪ Even ▪ None / 1 stop bit ▪ None / 2 stop bits
Factory setting	Even

- Additional information**
- Options*
- Picklist **ASCII** option:
- 0 = **Even** option
 - 1 = **Odd** option
- Picklist **RTU** option:
- 0 = **Even** option
 - 1 = **Odd** option
 - 2 = None / 1 stop bit option
 - 3 = None / 2 stop bits option

Byte order

Navigation Expert → Communication → Modbus configuration → Byte order

Description Use this function to select the sequence in which the bytes are transmitted. The transmission sequence must be coordinated with the Modbus master.

- Selection**
- 0-1-2-3
 - 3-2-1-0
 - 1-0-3-2
 - 2-3-0-1

Factory setting 1-0-3-2

Additional information

Description

The byte sequence is not standardized by the Modbus protocol. However, if the host system and the measuring device do not use the same byte sequence, correct data exchange is not possible. Changing the byte sequence in the host system often requires an extensive knowledge and significant programming efforts. Endress+Hauser introduced the [Byte order parameter →](#) for this reason.

This makes it possible to use the standard settings of the host system and change the byte sequence on the measuring device by trial and error. If correct data exchange cannot be achieved by changing the byte sequence, the settings for the byte sequence of the host system must be adapted accordingly.

Byte transmission sequence

Byte addressing, i.e., the transmission sequence of the bytes, is not specified in the Modbus specification. For this reason, it is important to coordinate or match the addressing method between the master and slave during commissioning. This can be configured in the measuring device using the [Byte order parameter →](#).

The bytes are transmitted depending on the selection in the [Byte order parameter →](#).

FLOAT				
	Sequence			
Options	1.	2.	3.	4.
1 - 0 - 3 - 2 *	Byte 1 (MMMMMMMM)	Byte 0 (MMMMMMMM)	Byte 3 (SEEEEEEE)	Byte 2 (EMMMMMMM)
0 - 1 - 2 - 3	Byte 0 (MMMMMMMM)	Byte 1 (MMMMMMMM)	Byte 2 (EMMMMMMM)	Byte 3 (SEEEEEEE)
2 - 3 - 0 - 1	Byte 2 (EMMMMMMM)	Byte 3 (SEEEEEEE)	Byte 0 (MMMMMMMM)	Byte 1 (MMMMMMMM)

3 - 2 - 1 - 0	Byte 3 (SEEEEEEE)	Byte 2 (EMMMMMMM)	Byte 1 (MMMMMMMM)	Byte 0 (MMMMMMMM)
* = factory setting, S = sign, E = exponent, M = mantissa				

INTEGER		
	Sequence	
Options	1.	2.
1 - 0 - 3 - 2 *	Byte 1 (MSB)	Byte 0 (LSB)
3 - 2 - 1 - 0		
0 - 1 - 2 - 3	Byte 0 (LSB)	Byte 1 (MSB)
2 - 3 - 0 - 1		
* = factory setting, MSB = most significant byte, LSB = least significant byte		

STRING					
Presentation taking the example of a device parameter with a data length of 18 bytes.					
	Sequence				
Options	1.	2.	...	17.	18.
1 - 0 - 3 - 2 *	Byte 17 (MSB)	Byte 16	...	Byte 1	Byte 0 (LSB)
3 - 2 - 1 - 0					
0 - 1 - 2 - 3	Byte 16	Byte 17 (MSB)	...	Byte 0 (LSB)	Byte 1
2 - 3 - 0 - 1					
* = factory setting, MSB = most significant byte, LSB = least significant byte					

Telegram delay

Navigation   Expert → Communication → Modbus configuration → Telegram delay

Prerequisite Modbus RS485 Device

Description Use this function to enter a delay time after which the measuring device replies to the request telegram of the Modbus master. This allows communication to adapt to slow Modbus RS485 masters.

User entry 0 to 100 ms

Factory setting 6 ms

Priority IP address

Navigation   Expert → Communication → Modbus configuration → Priority IP address

Prerequisite Modbus RS485 Device

Description The client IP address which has a guaranteed connection to the server (analyzer).

User entry Signed floating-point number

Factory setting 0.0.0.0

Inactivity timeout

Navigation	Expert → Communication → Modbus configuration → Inactivity timeout
Prerequisite	Modbus RS485 Device
Description	The amount of inactivity time before the client connection is closed for non-priority IP addresses.
User entry	0 to 99 s
Factory setting	0 s

Max connections

Navigation	Expert → Communication → Modbus configuration → Max connections
Prerequisite	Modbus TCP Device
Description	Number of connections to the Modbus server.
User entry	1 to 4
Factory setting	4

Failure mode

Navigation	Expert → Communication → Modbus configuration → Failure mode
Description	Use this function to select the measured value output in the event of a diagnostic message via Modbus communication.
Selection	<ul style="list-style-type: none"> ▪ NaN value¹ ▪ Last valid value
Factory setting	NaN value
Additional information	<p><i>Options</i></p> <ul style="list-style-type: none"> ▪ NaN value. The device outputs the NaN value¹. ▪ Last valid value. The device outputs the last valid measured value before the fault occurred. This effect of this parameter depends on the option selected in the Assign diagnostic behavior parameter.

Bus termination

Navigation	Expert → Communication → Modbus configuration → Bus termination
Prerequisite	Modbus RS485 Device
Description	Displays whether the terminating resistor is enabled or disabled.
User interface	<ul style="list-style-type: none"> ▪ Off ▪ On

¹ Not a Number
Endress+Hauser

Factory setting Off

Additional information *Selection*

- **Off.** The terminating resistor is disabled.
- **On.** The terminating resistor is enabled.

For detailed information about enabling the terminating resistor, see the [Operating Instructions for the device](#) → , "Enabling the terminating resistor" section

Fieldbus writing access

Navigation   Expert → Communication → Modbus configuration → Fieldbus writing access

Description Use this function to restrict access to the measuring device via fieldbus (Modbus protocol).

Selection

- Read + write
- Read only

Factory setting Read + write

Additional information *Description*

If read and write protection is enabled, the parameter can only be controlled and reset via local operation. Access is no longer possible via operating tools. This does not affect cyclic measured value transmission to the higher-order system, which is always guaranteed.

Selection

- **Read + write.** The parameters are read and write parameters.
- **Read only.** The parameters are read only parameters.

3.6.2 Modbus information

Navigation  Expert → Communication → Modbus information

Device ID

Navigation   Expert → Communication → Modbus information → Device ID

Description Displays the device ID for identifying the measuring device.

User interface 4-digit hexadecimal number

Device revision

Navigation   Expert → Communication → Modbus information → Device revision

Description Displays the device revision.

User interface 4-digit hexadecimal number

3.6.3 Modbus data map

Navigation  Expert → Communication → Modbus data map

▶ Modbus data map

Scan list register 0 to 15

→  77

Scan list area 0 to 15

→  77

Scan list register 0 to 15

Navigation  Expert → Communication → Modbus data map → Scan list register 0 to 15

Description Use this function to enter the scan list register. By entering the register address (1-based), up to 16 device parameters can be grouped by assigning them to the scan list registers 0 to 15. The data of the device parameters assigned here are read out via the register addresses 5051 to 5081.

User entry 1 to 65,535

Factory setting 1

Scan list area 0 to 15

Navigation  Expert → Communication → Modbus data map → Scan list area 0 to 15

Description Use this function to enter the scan list area.

User entry 1 to 65,535

Factory setting 1

3.6.4 Web server

Navigation  Expert → Communication → Web server

▶ Web server

Web server language

→  77

MAC address

→  77

DHCP client

→  77

IP address

→  79

Subnet mask

→  79

Default gateway

→  79

Web server functionality

→  79

Login page

→  79

Web server language

Navigation	  Expert → Communication → Web server → Webserv.language
Description	Use this function to select the language configured for the Web server.
User entry	<ul style="list-style-type: none"> ▪ English ▪ Français ▪ Italiano ▪ русский язык (Russian) ▪ 中文 (Chinese)
Factory setting	English

MAC address

Navigation	  Expert → Communication → Web server → MAC Address
Description	Displays the MAC address of the measuring device.
User entry	Unique 12-digit character string comprising letters and numbers.
Factory setting	Each measuring device is given an individual address.
Additional information	<p><i>Example</i></p> <p>For the display format 00:07:05:10:01:5F</p>

DHCP client

Navigation	  Expert → Communication → Web server → DHCP client
Description	Use this function to activate and deactivate the DHCP client functionality.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ On
Factory setting	Off
Additional information	<p><i>Effect</i></p> <p>If the DHCP client functionality of the web server is selected, the IP address → , Subnet mask → , and Default gateway →  are set automatically.</p> <p>NOTICE</p> <ul style="list-style-type: none"> ▶ Identification is via the MAC address of the measuring device. ▶ The IP address →  in the IP address parameter →  is ignored as long as the DHCP client parameter →  is active. This is also the case, in particular, if the DHCP server cannot be reached. The IP address →  in the parameter of the same name is only used if the DHCP client parameter →  is inactive.

IP address

Navigation	Expert → Communication → Web server → IP address
Description	Display or enter the IP address of the Web server integrated in the measuring device.
User entry	4 octet: 0 to 255 (in the particular octet)
Factory setting	192.168.1.212

Subnet mask

Navigation	Expert → Communication → Web server → Subnet mask
Description	Display or enter the subnet mask.
User entry	4 octet: 0 to 255 (in the particular octet)
Factory setting	255.255.255.0

Default gateway

Navigation	Expert → Communication → Web server → Default gateway
Description	Display or enter the Default gateway.
User entry	4 octet: 0 to 255 (in the particular octet)
Factory setting	0.0.0.0

Web server functionality

Navigation	Expert → Communication → Web server → Webserver functionality
Description	Use this function to switch the Web server on and off.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ HTML Off ▪ On
Factory setting	On
Additional information	<p><i>Description</i></p> <ul style="list-style-type: none"> ▪ Off. The Web server is completely disabled. <ul style="list-style-type: none"> ▪ Port 80 is locked. ▪ HTML Off. The HTML version of the Web server is not available. ▪ On. The complete Web server functionality is available. <ul style="list-style-type: none"> ▪ JavaScript is used. ▪ The password is transferred in an encrypted state. ▪ Any change to the password is also transferred in an encrypted state.

Login page

Navigation	  Expert → Communication → Web server → Login page
Description	Use this function to select the format of the login page.
Selection	<ul style="list-style-type: none">▪ Without header▪ With header
Factory setting	With header

3.7 Diagnostics

Navigation  Expert → Diagnostics

▶ Diagnostics

▶ Simulation	→  110
▶ Spectrum plots	→  114
▶ SD card	→  119

Actual diagnostics

Navigation	 Expert → Diagnostics → Actual diagnostics
Prerequisite	A diagnostic event has occurred.
Description	Displays the current diagnostic message. If two or more messages occur simultaneously, the message with the highest priority is shown on the display.
User interface	Symbol for diagnostic behavior, diagnostic code and short message.
Additional information	<i>Display</i> Additional pending diagnostic messages can be viewed in the Diagnostic list Submenu →  .

Via the local display: the time stamp and corrective measures referring to the cause of the diagnostic message can be accessed via the  key.

Example

For the display format:

⊗ F271 Main electronics failure

Previous diagnostics service ID

Navigation	  Expert → Diagnostics → Previous diagnostics
Prerequisite	Two diagnostic events have already occurred.
Description	Displays the diagnostic message that occurred before the current message.
User interface	0 to 65,535
Additional information	<p><i>Display</i></p> <p>Via the local display: the time stamp and corrective measures referring to the cause of the diagnostic message can be accessed via the  key.</p> <p><i>Example</i></p> <p>For the display format:</p> <p>⊗ F271 Main electronics failure</p>

Operating time from restart

Navigation	  Expert → Diagnostics → Operating time from restart
Description	Use this function to display the time the device has been in operation since the last device restart.
User interface	Days (d), hours (h), minutes (m) and seconds (s)

Operating time

Navigation	  Expert → Diagnostics → Operating time
Description	Use this function to display the length of time the device has been in operation.
User interface	Days (d), hours (h), minutes (m) and seconds (s)
Additional information	<p><i>User interface</i></p> <p>The maximum number of days is 9999, which is equivalent to 27 years.</p>

3.7.1 Diagnostic list

Navigation   Expert → Diagnostics → Diagnostic list

▶ Diagnostic list	
Diagnostics 1	→  83
Diagnostics 2	→  83
Diagnostics 3	→  84
Diagnostics 4	→  85
Diagnostics 5	→  85

Diagnostics 1

Navigation   Expert → Diagnostics → Diagnostic list → Diagnostics 1

Description Displays the current diagnostics message with the highest priority.

User interface 0 to 65,535

Additional information *Display*
Via the local display: the time stamp and corrective measures referring to the cause of the diagnostic message can be accessed via the  key.

Examples

For the display format:

⊗ F 271 Main electronics failure

⊗ F276 I/O module failure

Timestamp 1

Navigation  Expert → Diagnostics → Diagnostic list → Timestamp

Description Displays the operating time when the diagnostic message with the highest priority occurred.

User interface Days (d), hours (h), minutes (m) and seconds (s)

Additional information *Display*
The diagnostic message can be viewed via the [Diagnostics 1 parameter](#) .

Example

For the display format:

24d12h13m00s

Diagnostics 2

Navigation   Expert → Diagnostics → Diagnostic list → Diagnostics 2

Description Displays the current diagnostics message with the second-highest priority.

User interface	0 to 65,535
Additional information	<p><i>Display</i></p> <p>Via the local display: the time stamp and corrective measures referring to the cause of the diagnostic message can be accessed via the  key.</p> <p><i>Examples</i></p> <p>For the display format:</p> <ul style="list-style-type: none"> ⊗ F271 Main electronics failure ⊗ F276 I/O module failure

Timestamp 2

Navigation	 Expert → Diagnostics → Diagnostic list → Timestamp
Description	Displays the operating time when the diagnostic message with the second-highest priority occurred.
User interface	Days (d), hours (h), minutes (m) and seconds (s)
Additional information	<p><i>Display</i></p> <p>The diagnostic message can be viewed via the Diagnostics 2 parameter → .</p> <p><i>Example</i></p> <p>For the display format:</p> <p>24d12h13m00s</p>

Diagnostics 3

Navigation	  Expert → Diagnostics → Diagnostic list → Diagnostics 3
Description	Displays the current diagnostics message with the third-highest priority.
User interface	0 to 65,535
Additional information	<p><i>Display</i></p> <p>Via the local display: the time stamp and corrective measures referring to the cause of the diagnostic message can be accessed via the  key.</p> <p><i>Examples</i></p> <p>For the display format:</p> <ul style="list-style-type: none"> ⊗ F271 Main electronics failure ⊗ F276 I/O module failure

Timestamp 3

Navigation	 Expert → Diagnostics → Diagnostic list → Timestamp
Description	Displays the operating time when the diagnostic message with the third-highest priority occurred.
User interface	Days (d), hours (h), minutes (m) and seconds (s)
Additional information	<p><i>Display</i></p> <p>The diagnostic message can be viewed via the Diagnostics 3 parameter → .</p>

Example

For the display format:

24d12h13m00s

Diagnostics 4

Navigation	  Expert → Diagnostics → Diagnostic list → Diagnostics 4
Description	Displays the current diagnostics message with the fourth-highest priority.
User interface	0 to 65,535
Additional information	<p><i>Display</i></p> <p>Via the local display: the time stamp and corrective measures referring to the cause of the diagnostic message can be accessed via the  key.</p> <p><i>Examples</i></p> <p>For the display format:</p> <ul style="list-style-type: none">  F271 Main electronics failure  F276 I/O module failure

Timestamp 4

Navigation	 Expert → Diagnostics → Diagnostic list → Timestamp
Description	Displays the operating time when the diagnostic message with the fourth-highest priority occurred.
User interface	Days (d), hours (h), minutes (m) and seconds (s)
Additional information	<p><i>Display</i></p> <p>The diagnostic message can be viewed via the Diagnostics 4 parameter → .</p> <p><i>Example</i></p> <p>For the display format:</p> <p>24d12h13m00s</p>

Diagnostics 5

Navigation	  Expert → Diagnostics → Diagnostic list → Diagnostics 5
Description	Displays the current diagnostics message with the fifth-highest priority.
User interface	Symbol for diagnostic behavior, diagnostic code and short message.
Additional information	<p><i>Display</i></p> <p>Via the local display: the time stamp and corrective measures referring to the cause of the diagnostic message can be accessed via the  key.</p> <p><i>Examples</i></p> <p>For the display format:</p> <ul style="list-style-type: none">  F271 Main electronics failure  F276 I/O module failure

Timestamp 5

Navigation	 Expert → Diagnostics → Diagnostic list → Timestamp
Description	Displays the operating time when the diagnostic message with the fifth-highest priority occurred.
User interface	Days (d), hours (h), minutes (m) and seconds (s)
Additional information	<p><i>Display</i></p> <p>The diagnostic message can be viewed via the Diagnostics 5 parameter → .</p> <p><i>Example</i></p> <p>For the display format: 24d12h13m00s</p>

3.7.2 Event logbook

Viewing event messages

Event messages are displayed in chronological order. The event history includes both diagnostic events and information events. The symbol in front of the timestamp indicates whether the event has started or ended.

Navigation  Expert → Diagnostics → Event logbook

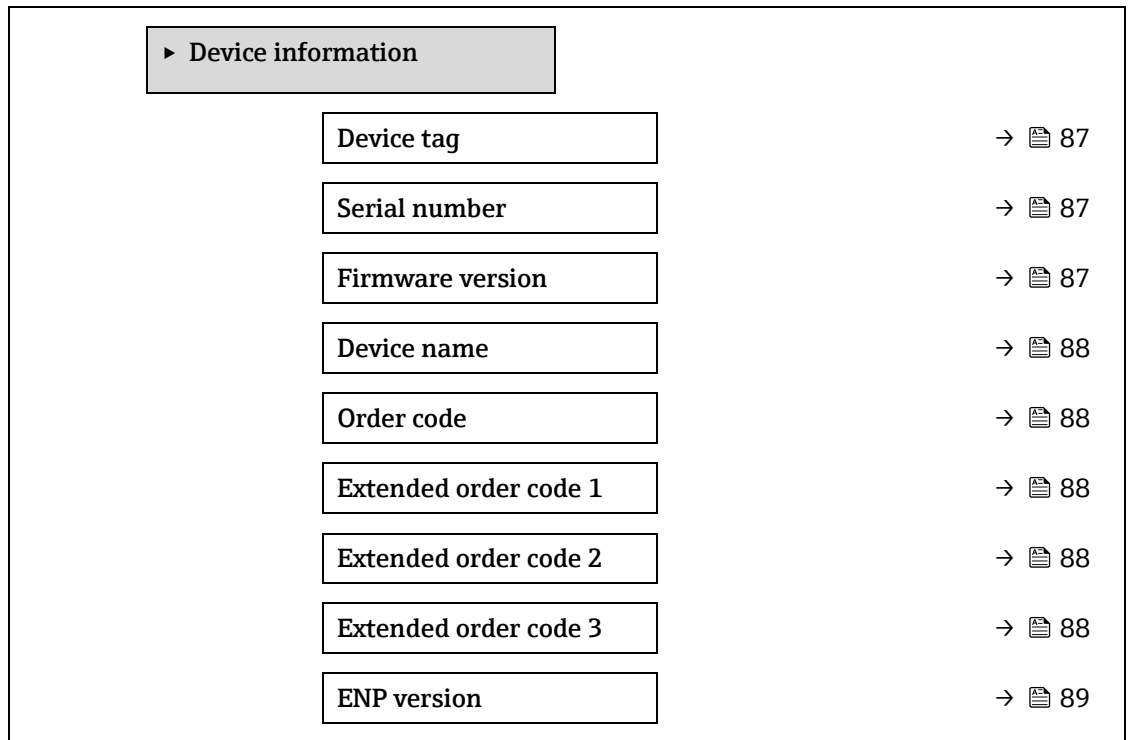

Filter options

Navigation	 Expert → Diagnostics → Event logbook → Filter options
Description	Use this function to select the category whose event messages are displayed in the event logbook of the local display.
Selection	<ul style="list-style-type: none"> ▪ All ▪ Failure (F) ▪ Function check (C) ▪ Out of specification (S) ▪ Maintenance required (M) ▪ Information (I)
Factory setting	All
Additional information	<p><i>Description</i></p> <p>The status signals are categorized in accordance with VDI/VDE 2650 and NAMUR Recommendation NE 107:</p> <p>F = Failure C = Function Check S = Out of Specification M = Maintenance Required I = Information</p>

3.7.3 Device information

Navigation Expert → Diagnostics → Device info

Device tag

Navigation Expert → Diagnostics → Device information → Device tag

Description Displays a unique name for the measuring point so it can be identified quickly within the user's facility. It is displayed in the header.

User interface Max. 32 characters, such as letters, numbers or special characters (e.g., @, %, /).

Factory setting H2O Analyzer

Additional information *User interface*

1 Position of the header text on the display

The number of characters displayed depends on the characters used.

Serial number

Navigation Expert → Diagnostics → Device information → Serial number

Description Displays the serial number of the measuring device. The number can be found on the nameplate of the analyzer.

User interface Max. 11-digit character string comprising letters and numbers.

Additional information*Description***Uses of the serial number:**

- To identify the measuring device quickly, e.g., when contacting Endress+Hauser.
- To obtain specific information on the measuring device using the Device Viewer:
www.endress.com/deviceviewer

Firmware version**Navigation**

 Expert → Diagnostics → Device information → Firmware version

Description

Displays the device firmware version installed.

User interface

Character string in the format xx.yy.zz

Additional information*Display*

The Firmware version is also located:

- On the title page of the Operating instructions
- On the transmitter nameplate

Device name**Navigation**

 Expert → Diagnostics → Device information → Device name

Description

Displays the name of the transmitter. It can also be found on the nameplate of the transmitter.

User interface

H2O Analyzer

Order code**Navigation**

 Expert → Diagnostics → Device information → Order code

Description

Displays the device order code.

User interface

Character string composed of letters, numbers and certain punctuation marks (e.g., /).

Additional information*Description*

The order code can be found on the nameplate of the sensor and transmitter in the "Order code" field.

The order code is generated from the extended order code through a process of reversible transformation. The extended order code indicates the attributes for all the device features in the product structure. The device features are not directly readable from the order code.

Uses of the order code:

- To order an identical spare device.
- To identify the device quickly and easily, e.g., when contacting Endress+Hauser.

Extended order code 1**Navigation**

 Expert → Diagnostics → Device information → Extended order code 1

Description

Displays the first part of the extended order code. Due to length restrictions, the extended order code is split into a maximum of 3 parameters.

User interface	Character string
Additional information	<p><i>Description</i></p> <p>The extended order code indicates the version of all the features of the product structure for the measuring device and thus uniquely identifies the measuring device.</p>

Extended order code 2

Navigation	Expert → Diagnostics → Device information → Extended order code 2
Description	Displays the second part of the extended order code.
User interface	Character string
Additional information	For additional information, see Extended order code 1 parameter → .

Extended order code 3

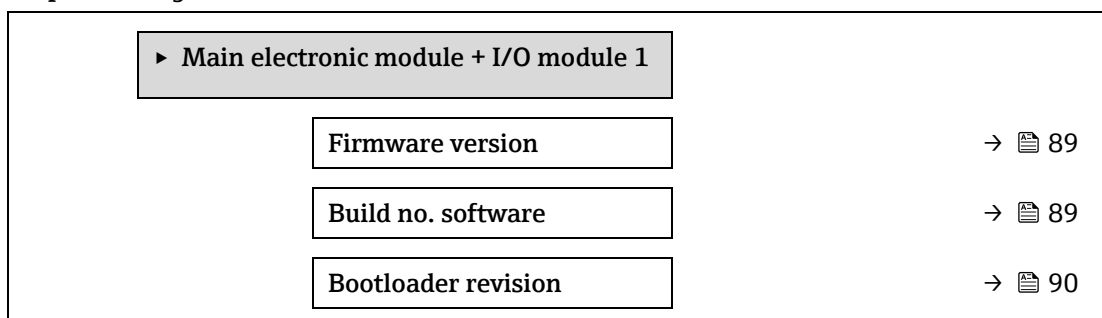

Navigation	Expert → Diagnostics → Device information → Extended order code 3
Description	Displays the third part of the extended order code.
User interface	Character string
Additional information	For additional information, see Extended order code 1 parameter → .

ENP version

Navigation	Expert → Diagnostics → Device information → ENP version
Description	Displays the version of the electronic nameplate.
User interface	Character string
Factory setting	2.02.00
Additional information	<p><i>Description</i></p> <p>This electronic nameplate stores a data record for device identification that includes more data than the nameplates attached to the outside of the device.</p>

3.7.4 Main electronic module + I/O module 1

Navigation Expert → Diagnostics → Main electronic +I/O module 1

Firmware version

Build no. software

Navigation  Expert → Diagnostics → Display module → Build no. software

Description Use this function to display the software build number of the module.

User interface Positive integer

Bootloader revision

Navigation  Expert → Diagnostics → Display module → Bootloader rev.

Description Use this function to display the bootloader revision of the software.

User interface Positive integer

3.7.9 Data logging

Navigation  Expert → Diagnostics → Data logging

NOTICE

- ▶ This menu is available through the web server only. The analyzer’s local display does not support charts.

▶ Data logging	
Assign chan. 1 to n	→  94
Logging interval	→  94
Clear logging data	→  95
Data logging	→  95

Logging delay	→  95
Data log.control	→  96
Data log. status	→  96
Logging duration	→  97

Assign channel 1 to n

Navigation	  Expert → Diagnostics → Data logging → Assign channel 1 to n
Description	Use this function to select a process variable for the data logging channel.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ Concentration ▪ Cell gas pressure ▪ Cell gas temperature ▪ Dew point 1 ▪ Dew point 2 ▪ Current output 1 ▪ Current output 2 ▪ Flow switch state
Factory setting	Off

Additional information	<p><i>Description</i></p> <p>With the extended HistoROM a total of 1000 measured values can be logged. This means:</p> <ul style="list-style-type: none"> ▪ 1000 data points if 1 logging channel is used ▪ 500 data points if 2 logging channels are used ▪ 333 data points if 3 logging channels are used ▪ 250 data points if 4 logging channels are used <p>Once the maximum number of data points is reached, the oldest data points in the data log are cyclically overwritten in such a way that the last 1000, 500, 333 or 250 measured values are always in the log (ring memory principle).</p> <p>NOTICE</p> <ul style="list-style-type: none"> ▶ The log contents are cleared if the option selected is changed.
-------------------------------	--

Logging interval

Navigation	  Expert → Diagnostics → Data logging → Logging interval
Description	Use this function to enter the logging interval T_{log} for data logging. This value defines the time interval between the individual data points in the memory.
User entry	0.1 to 3600.0 s
Factory setting	1.0 s
Additional information	<p><i>Description</i></p> <p>This defines the interval between the individual data points in the data log, and thus the maximum loggable process time T_{log}:</p> <ul style="list-style-type: none"> ▪ If 1 logging channel is used: $T_{log} = 1000 \times t_{log}$

- If 2 logging channels are used: $T_{\text{log}} = 500 \times t_{\text{log}}$
- If 3 logging channels are used: $T_{\text{log}} = 333 \times t_{\text{log}}$
- If 4 logging channels are used: $T_{\text{log}} = 250 \times t_{\text{log}}$

Once this time elapses, the oldest data points in the data log are cyclically overwritten such that a time of T_{log} always remains in the memory (ring memory principle).

NOTICE

- ▶ The log contents are cleared if the length of the logging interval is changed.

Example

If 1 logging channel is used:

- $T_{\text{log}} = 1000 \times 1 \text{ s} = 1\,000 \text{ s} \approx 15 \text{ min}$
- $T_{\text{log}} = 1000 \times 10 \text{ s} = 10\,000 \text{ s} \approx 3 \text{ h}$
- $T_{\text{log}} = 1000 \times 80 \text{ s} = 80\,000 \text{ s} \approx 1 \text{ d}$
- $T_{\text{log}} = 1000 \times 3\,600 \text{ s} = 3\,600\,000 \text{ s} \approx 41 \text{ d}$

Clear logging data

Navigation	<ul style="list-style-type: none">   Diagnostics → Data logging → Clear logging   Expert → Diagnostics → Data logging → Clear logging
Description	Use this function to clear the entire logging data.
Selection	<ul style="list-style-type: none"> ▪ Cancel ▪ Clear data
Factory setting	Cancel
Additional information	<p><i>Selection</i></p> <ul style="list-style-type: none"> ▪ Cancel. The data is not cleared. All the data is retained. ▪ Clear data. The logging data is cleared. The logging process starts from the beginning.

Data logging

Navigation	<ul style="list-style-type: none">   Diagnostics → Data logging → Data logging   Expert → Diagnostics → Data logging → Data logging
Description	Use this function to select the data logging method.
Selection	<ul style="list-style-type: none"> ▪ Overwriting ▪ Not overwriting
Factory setting	Overwriting
Additional information	<p><i>Selection</i></p> <ul style="list-style-type: none"> ▪ Overwriting. The device memory applies the FIFO¹ principle. ▪ Not overwriting. Data logging is canceled if the measured value memory is full (single shot).

¹ FIFO = First in, first out data storage

Logging delay

Navigation	<ul style="list-style-type: none"> Diagnostics → Data logging → Logging delay Expert → Diagnostics → Data logging → Logging delay
Prerequisite	In the Data logging parameter → , the Not overwriting option is selected.
Description	Use this function to enter the time delay for measured value logging.
User entry	0 to 999 h
Factory setting	0 h
Additional information	<p><i>Description</i></p> <p>Once data logging has been started with the Data logging control parameter → , the device does not save any data for the duration of the delay time entered.</p>

Data logging control

Navigation	<ul style="list-style-type: none"> Diagnostics → Data logging → Data logging control Expert → Diagnostics → Data logging → Data logging control
Prerequisite	In the Data logging parameter → , the Not overwriting option is selected.
Description	Use this function to start and stop measured value logging.
Selection	<ul style="list-style-type: none"> ▪ None ▪ Delete + start ▪ Stop
Factory setting	None
Additional information	<p><i>Selection</i></p> <ul style="list-style-type: none"> ▪ None. Initial measured value logging status. ▪ Delete + start. All the measured values recorded for all the channels are deleted and measured value logging starts again. ▪ Stop. Measured value logging is stopped.

Data logging status

Navigation	<ul style="list-style-type: none"> Diagnostics → Data logging → Data log. status Expert → Diagnostics → Data logging → Data log. status
Prerequisite	In the Data logging parameter → , the Not overwriting option is selected.
Description	Displays the measured value logging status.
Selection	<ul style="list-style-type: none"> ▪ Done ▪ Delay active ▪ Active ▪ Stopped
Factory setting	Done
Additional information	<p><i>Selection</i></p> <ul style="list-style-type: none"> ▪ Done. Measured value logging has been performed and completed successfully.

- **Delay active.** Measured value logging has been started but the logging interval has not yet elapsed.
- **Active.** The logging interval has elapsed, and measured value logging is active.
- **Stopped.** Measured value logging is stopped.

Logging duration

Navigation	<ul style="list-style-type: none"> ☰☰ Diagnostics → Data logging → Logging duration ☰☰ Expert → Diagnostics → Data logging → Logging duration
Prerequisite	In the Data logging parameter → ☰, the Not overwriting option is selected.
Description	Displays the total logging duration.
Selection	Positive floating-point number
Factory setting	0 s

3.7.10 Heartbeat Technology

For detailed information on the parameter descriptions for the **Heartbeat Verification+Monitoring**, refer to Special Documentation for the device → ☰ 7.

Validation gas information	→ 99
Validation concentration	→ 99
Validation allowance	→ 100

Select validation calibration

Navigation	Expert → Diagnostics → Heartbeat Technology → Heartbeat settings → Gas validation settings → Select validation calibration
Description	Select the calibration for validation. It should closely match the composition of the validation gas.
Selection	<ul style="list-style-type: none"> ▪ 1 ▪ 2 ▪ 3 ▪ 4
Factory setting	1

Validation Type

Navigation	Expert → Diagnostics → Heartbeat Technology → Heartbeat settings → Gas validation settings → Validation Type
Description	Select whether the validation gas flow is manual (user controlled) or auto (device controlled).
Selection	<ul style="list-style-type: none"> ▪ Validation manual gas ▪ Validation auto gas
Factory setting	Validation manual gas

Num Validations

Navigation	Expert → Diagnostics → Heartbeat Technology → Heartbeat settings → Gas validation settings → Num Validations
Description	Select the number of validation points.
Selection	1
Factory setting	1

Validation gas purge time

Navigation	Expert → Diagnostics → Heartbeat Technology → Heartbeat settings → Gas validation settings → Validation gas purge time
Description	Enter the validation gas purge time.
User entry	0 to 5 minutes
Factory setting	1.00 min

Meas. Duration

Navigation	Expert → Diagnostics → Heartbeat Technology → Heartbeat settings → Gas validation settings → Meas. duration
Description	Enter the duration for calculating the measurement statistics (mean, standard deviation).
User entry	0.25 to 60 minutes
Factory setting	1.00 min

Validation gas information

Navigation	Expert → Diagnostics → Heartbeat Technology → Heartbeat settings → Gas validation settings → Validation gas information
Description	Enter a description or identifier for the source of validation gas (stream, bottle, bottle serial number).
User entry	Max. 32 characters such as letters, numbers, or special characters (e.g., @, %, /).
Factory setting	Unknown validation gas

Validation concentration

Navigation	  Expert → Diagnostics → Heartbeat Technology → Heartbeat settings → Gas validation settings → Validation concentration
Description	Enter the concentration of the analyte in the validation gas.
User entry	0 to 1000000 ppmv
Factory setting	0 ppmv
Additional information	Validation concentration value dependent upon the concentration unit.

Validation allowance

Navigation	  Expert → Diagnostics → Heartbeat Technology → Heartbeat settings → Gas validation settings → Validation allowance
Description	Set the deviation allowance between the validation concentration and the measured concentration.
User entry	0 to 100 %
Factory setting	0.0000%

Performing verification wizard

Year 

Navigation	  Expert → Diagnostics → Heartbeat Technology → Performing verification → Year
Prerequisite	Can be edited if Heartbeat Verification is not active.
Description	Use this function to enter the year of verification.
User entry	9 to 99
Factory setting	21

Month 

Navigation	  Expert → Diagnostics → Heartbeat Technology → Performing verification → Month
Prerequisite	Can be edited if Heartbeat Verification is not active.
Description	Use this function to select the month of verification.
User entry	<ul style="list-style-type: none"> ▪ January ▪ February ▪ March ▪ April ▪ May ▪ June ▪ July ▪ August ▪ September ▪ October ▪ November ▪ December
Factory setting	January

Day 

Navigation	  Expert → Diagnostics → Heartbeat Technology → Performing verification → Day
Prerequisite	Can be edited if Heartbeat Verification is not active.
Description	Use this function to enter the day of the month of verification.
User entry	1 to 31 d
Factory setting	1 d

Hour 

Navigation	  Expert → Diagnostics → Heartbeat Technology → Performing verification → Hour
Prerequisite	Can be edited if Heartbeat Verification is not active.
Description	Use this function to enter the hour of verification.
User entry	0 to 23 h
Factory setting	12 h

AM/PM 

Navigation	  Expert → Diagnostics → Heartbeat Technology → Performing verification → AM/PM
Prerequisite	Can be edited if Heartbeat Verification is not active. The dd.mm.yy hh:mm am/pm option or the mm/dd/yy hh:mm am/pm option is selected in the Date/time format parameter →  .
Description	Use this function to select the time entry in the morning (AM option) or afternoon (PM option) in the case of 12-hour notation.
User entry	<ul style="list-style-type: none"> ▪ AM ▪ PM
Factory setting	AM

Minute 

Navigation	  Expert → Diagnostics → Heartbeat Technology → Performing verification → Minute
Prerequisite	Can be edited if Heartbeat Verification is not active.
Description	Use this function to enter the minutes of verification.
User entry	0 to 59 min
Factory setting	0 min

Meas. duration 

Navigation	  Expert → Diagnostics → Heartbeat Technology → Performing verification → Meas. Duration
Prerequisite	Can be edited if verification status is not active.
Description	Enter the duration for calculating the measurement statistics (mean, standard deviation).
User entry	0.25 to 60 minutes

Verification mode 

Navigation	  Expert → Diagnostics → Heartbeat Technology → Performing verification → Verification mode
Prerequisite	Can be edited if verification status is not active.

Description	Select verification mode. <ul style="list-style-type: none"> ▪ Standard verification. Verification is performed automatically by the device and without manual checking of external measured variables. ▪ Extended validation. Similar to standard verification but with performing measurement using validation reference gas. ▪ Extended current output. Similar to standard verification but with performing measurement using validation reference gas. ▪ Extended validation and current output. This feature performs both extended validation and extended current output.
Selection	<ul style="list-style-type: none"> ▪ Standard verification ▪ Extended validation ▪ Extended current output ▪ Extended validation and current output
Factory setting	Standard verification

External device information

Navigation	  Expert → Diagnostics → Heartbeat Technology → Performing verification → Ext. device info
Prerequisite	With the following conditions: The Extended current output or Extended val and current out option is selected in the Verification mode parameter →  . Can be edited if the verification status is not active.
Description	Record measuring equipment for extended verification.
User entry	Max. 32 characters such as letters, numbers or special characters (e.g. @,%, /).

Start verification

Navigation	  Expert → Diagnostics → Heartbeat Technology → Performing verification → Start verification
Description	Start the verification. To carry out a complete verification, select the selection parameters individually. Once the external measured values have been recorded, verification is started using the Start option.
Selection	<ul style="list-style-type: none"> ▪ Cancel ▪ Output 1 low value¹ ▪ Output 1 high value¹ ▪ Output 2 low value¹ ▪ Output 2 high value¹ ▪ Start ▪ Prepare validation ▪ End validation
Factory setting	Cancel

¹ Visibility depends on order options or device settings

Progress

Navigation	  Expert → Diagnostics → Heartbeat Technology → Performing verification → Progress
Description	The progress of the process is indicated.
User interface	0 to 100 %

Measured values

Navigation	  Expert → Diagnostics → Heartbeat Technology → Performing verification → Measured values
Prerequisite	One of the following options is selected in the Start verification parameter  : <ul style="list-style-type: none"> ▪ Output 1 low value ▪ Output 1 high value ▪ Output 2 low value ▪ Output 2 high value
Description	Use this function to enter the measured values (actual values) for the external measured variable current output: Output current in [mA].
User entry	Signed floating-point number
Factory setting	0

Output values

Navigation	  Expert → Diagnostics → Heartbeat Technology → Performing verification → Output values
Description	Displays the simulated output values (target values) for the external measured variable current output: Output current in [mA].
User interface	Signed floating-point number

Measured concentration

Navigation	  Expert → Diagnostics → Heartbeat Technology → Performing verification → Measured concentration
Description	Displays the concentration of the validation gas during extended validation.
User interface	0 to 1000000 ppmv

Status

Navigation	  Expert → Diagnostics → Heartbeat Technology → Performing verification → Status
Description	Displays the current status of the verification.
User interface	<ul style="list-style-type: none"> ▪ Done ▪ Busy ▪ Failed ▪ Not done ▪ Purging

Verification result

Navigation	🏠📄 Expert → Diagnostics → Heartbeat Technology → Performing verification → Verification Result
Description	Displays the overall result of the verification.

Current input 1 to n simulation

Navigation	  Expert → Diagnostics → Simulation → Current input 1 to n sim.
Description	Option for switching simulation of the current input on and off. The display alternates between the measured value and a diagnostic message of the "Function check" category (C) while simulation is in progress. The desired simulation value is defined in the Value current input 1 to n parameter.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ On
Factory setting	Off
Additional information	<i>Selection</i> <ul style="list-style-type: none"> ▪ Off. Current simulation is switched off. The device is in normal measuring mode or another process variable is being simulated. ▪ On. Current simulation is active.

Value current input 1 to n

Navigation	  Expert → Diagnostics → Simulation → Value current input 1 to n
Prerequisite	In the Current input 1 to n simulation parameter, the On option is selected.
Description	Use this function to enter the current value for the simulation. In this way, users can verify the correct configuration of the current input and the correct function of upstream feed-in units.
User entry	0 to 22.5 mA

Current output 1 to n simulation

Navigation	  Expert → Diagnostics → Simulation → Current output 1 to n sim.
Description	Use this function to switch simulation of the current output on and off. The display alternates between the measured value and a diagnostic message of the "Function check" category (C) while simulation is in progress.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ On
Factory setting	Off

Additional information *Description*
The desired simulation value is defined in the **Value current output 1 to n** parameter.

Selection

- **Off.** Current simulation is switched off. The device is in normal measuring mode, or another process variable is being simulated.
- **On.** Current simulation is active.

Current output value 1 to n

Navigation Expert → Diagnostics → Simulation → Current output value 1 to n

Prerequisite In the **Current output 1 to n simulation** parameter, the **On** option is selected.

Description Use this function to enter a current value for the simulation. In this way, users can verify the correct adjustment of the current output.

User entry 0 to 22.5 mA

Additional information *Dependency*
The input range is dependent on the option selected in the [Current span parameter](#) → .

Switch output simulation 1 to n

Navigation Expert → Diagnostics → Simulation → Switch output simulation 1 to n

Prerequisite In the [Operating mode parameter](#) → , the **Switch** option is selected.

Description Use this function to switch simulation of the switch output on and off. The display alternates between the measured value and a diagnostic message of the "Function check" category (C) while simulation is in progress.

Selection

- Off
- On

Factory setting Off

Additional information *Description*
The desired simulation value is defined in the **Switch state 1 to n** parameter.

Selection

- **Off.** Switch simulation is switched off. The device is in normal measuring mode, or another process variable is being simulated.
- **On.** Switch simulation is active.

Switch state 1 to n

Navigation Expert → Diagnostics → Simulation → Switch state 1 to n

Description Use this function to select a switch value for the simulation. In this way, users can verify the correct adjustment of the switch output and the correct function of downstream switching units.

Selection

- Open
- Closed

Additional information	<p><i>Selection</i></p> <ul style="list-style-type: none"> ▪ Open. Switch simulation is switched off. The device is in normal measuring mode, or another process variable is being simulated. ▪ Closed. Switch simulation is active.
-------------------------------	--

Relay output 1 to n simulation

Navigation	  Expert → Diagnostics → Simulation → Relay out. 1 to n sim
Description	Use this function to switch simulation of the relay output on and off. The display alternates between the measured value and a diagnostic message of the "Function check" category (C) while simulation is in progress.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ On
Factory setting	Off
Additional information	<p><i>Description</i></p> <p>The desired simulation value is defined in the Switch state 1 to n parameter.</p> <p><i>Selection</i></p> <ul style="list-style-type: none"> ▪ Off. Relay simulation is switched off. The device is in normal measuring mode, or another process variable is being simulated. ▪ On. Relay simulation is active.

Switch state 1 to n

Navigation	  Expert → Diagnostics → Simulation → Switch state 1 to n
Prerequisite	The On option is selected in the Switch output simulation 1 to n parameter.
Description	Use this function to select a relay value for the simulation. In this way, users can verify the correct adjustment of the relay output and the correct function of downstream switching units.
Selection	<ul style="list-style-type: none"> ▪ Open ▪ Closed
Additional information	<p><i>Selection</i></p> <ul style="list-style-type: none"> ▪ Open. Relay simulation is switched off. The device is in normal measuring mode, or another process variable is being simulated. ▪ Closed. Relay simulation is active.

Device alarm simulation

Navigation	  Expert → Diagnostics → Simulation → Device alarm simulation
Description	Use this function to switch the device alarm on and off.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ On
Factory setting	Off

Additional information	<i>Description</i> The display alternates between the measured value and a diagnostic message of the "Function check" category (C) while simulation is in progress.
-------------------------------	--

Diagnostic event category

Navigation	Expert → Diagnostics → Simulation → Event category
Description	Use this function to select the category of the diagnostic events that are displayed for the simulation in the Diagnostic event simulation parameter → .
Selection	<ul style="list-style-type: none"> ▪ Sensor ▪ Electronics ▪ Configuration ▪ Process
Factory setting	Process

Diagnostic event simulation

Navigation	Expert → Diagnostics → Simulation → Diag. event sim.
Description	Use this function to select a diagnostic event for the simulation process that is activated.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ Diagnostic event picklist (depends on the category selected)
Factory setting	Off
Additional information	<i>Description</i> For the simulation, you can choose from the diagnostic events of the category selected in the Diagnostic event category parameter → .

3.7.12 Spectrum plots

Navigation Expert → Diagnostics → Spectrum plots

▶ Spectrum plots	
Midpoint default 1 to n	→ 114
Ramp default 1 to n	→ 115
Concentration	→ 115
Dew point 1	→ 115
Dew point 2	→ 115
Cell gas press.	→ 116
Cell gas temp.	→ 116

Detect. ref. lvl	→  116
Detect. zero lvl	→  116
Peak 1 index	→  116
Peak1 idx.delta	→  117
Peak 2 index	→  117
Peak2 idx.delta	→  117
Peak track index	→  117
Pk trk idx delta	→  118
Midpoint delta	→  118
Analyzer control	→  118
Reset	→  118
Det. 1 TIA gain	→  119

Midpoint default 1 to n

Navigation   Expert → Diagnostics → Spectrum plots → Midpoint default 1 to n

Description This value serves as a starting point for midpoint delta to optimized peak position.

Selection 0 to 120 mA

Additional information Peak midpoint value set during factory calibration.

Ramp default 1 to n

Navigation   Expert → Diagnostics → Spectrum plots → Ramp default 1 to n

Description Displays factory calibrated ramp for each calibration stream.

Selection 0 to 120 mA

Additional information Laser ramp represents the scan width of the spectrum.

Concentration

Navigation   Expert → Diagnostics → Spectrum plots → Concentration

Description Concentration of the measured analyte within the gas stream.

Selection 0 to 1000000 ppmv

Additional information Provides a plot of the measured concentration of the analyte.

Dew point 1

Navigation   Expert → Diagnostics → Spectrum plots → Dew point 1

Description Displays the moisture dew point 1 temperature that is currently calculated.

Selection Signed floating-point number

Additional information The unit is taken from the [temperature unit parameter](#) → . Dew point is the temperature at which moisture will start to condense into liquid for a given concentration and pressure. There are several industry accepted methods for moisture dew point calculation. See [BA02152C](#) →  for more details.

Dew point 2

Navigation   Expert → Diagnostics → Spectrum plots → Dew point 2

Description Displays the moisture dew point 2 temperature that is currently calculated.

Selection Signed floating-point number

Additional information The unit is taken from the [temperature unit parameter](#) → . Dew point is the temperature at which moisture will start to condense into liquid for a given concentration and pressure. There are several industry accepted methods for moisture dew point calculation. See [BA02152C](#) →  for more details.

Cell gas pressure

Navigation   Expert → Diagnostics → Spectrum plots → Cell gas pressure

Description Plots the gas pressure currently measured in the sample cell.

Selection -0.5 to 6.9 Bar

Additional information The unit is taken from the [pressure unit parameter](#) → . The current pressure of the sample cell during measurement.

Cell gas temperature

Navigation   Expert → Diagnostics → Spectrum plots → Cell gas temperature

Description Displays the gas pressure currently measured in the sample cell.

Selection -20 to +60 °C

Additional information The unit is taken from the [temperature unit parameter](#) → . The current temperature of the sample cell during measurement.

Detector reference level

Navigation	  Expert → Diagnostics → Spectrum plots → Detector reference level
Description	Plots the laser detector reference level currently measured.
Selection	0 to 5 mA
Additional information	The magnitude of the DC laser current. An out-of-range value can indicate the optics need to be cleaned or there is an alignment problem.

Detector zero level

Navigation	  Expert → Diagnostics → Spectrum plots → Detector zero level
Description	Displays the laser detector zero level currently measured.
Selection	0 to 5 mA
Additional information	The DC laser power when the laser is turned off (e.g., dark current).

Peak 1 index

Navigation	  Expert → Diagnostics → Spectrum plots → Peak 1 index
Description	Displays the absorption peak 1 index position in the currently measured 2f spectrum.
Selection	0 to 511.0
Additional information	Position of the absorption peak along the scan.

Peak 1 index delta

Navigation	  Expert → Diagnostics → Spectrum plots → Peak 1 index delta
Description	Displays of peak 1 index delta.
Selection	-511.0 to 511.0
Additional information	Peak 1 index delta is the difference between target peak 1 value and current peak 1 value.

Peak 2 index

Navigation	  Expert → Diagnostics → Spectrum plots → Peak 2 index
Description	Displays the absorption peak 2 index position in the currently measured 2f spectrum.
Selection	0 to 511.0
Additional information	Position of the secondary peak along the scan. Used for peak tracking purposes.

Peak 2 index delta

Navigation	  Expert → Diagnostics → Spectrum plots → Peak 2 index delta
Description	Displays of Peak 2 index delta.
Selection	-511.0 to 511.0
Additional information	Peak 2 index delta is the difference between target peak 2 value and current peak 2 value.

Peak track index

Navigation	  Expert → Diagnostics → Spectrum plots → Peak track index
Description	Displays the peak track index for the peak used for peak tracking in the currently measured 2f spectrum.
Selection	0 to 511.0
Additional information	If Off is selected in the Peak tracking analyzer control parameter this value will be zero. Otherwise, this value will mimic the parameter Peak 1 to n index depending on which peak is being used for peak tracking.

Peak track index delta

Navigation	  Expert → Diagnostics → Spectrum plots → Peak track index delta
Description	Displays the difference in the peak track index and the target index in the currently measured 2f spectrum.
Selection	-511.0. to 511.0
Additional information	If Off is selected in the Peak tracking analyzer control parameter, this value will be zero. Otherwise, this value will mimic the parameter Peak 1 to n index delta depending on which peak is being used for peak tracking.

Midpoint delta

Navigation	  Expert → Diagnostics → Spectrum plots → Midpoint delta
Description	Displays the difference in the calibrated midpoint value and the currently used midpoint value.
Selection	0 to 120 mA
Additional information	If Off is selected in the Peak tracking analyzer control parameter this value will be zero. Otherwise, this value will be the amount of change applied to the calibrated midpoint value by the peak tracking algorithm.

Analyzer control

Navigation	  Expert → Diagnostics → Spectrum plots → Analyzer control
Description	Controls whether peak tracking is activated.

Selection	<ul style="list-style-type: none"> ▪ Off ▪ On
Factory setting	Off
Additional information	Switch peak track on or off for the analyzer. There are separate peak track settings for each calibration. Normal operation peak tracking should be on.

Reset

Navigation	Expert → Diagnostics → Spectrum plots → Reset
Description	Reset analyzer peak midpoint current value.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ Reset
Factory setting	Off
Additional information	Reset will change analyzer peak midpoint current value to original calibrated peak location.

Det. 1 TIA gain

Navigation	Expert → Diagnostics → Spectrum plots → Det. 1 TIA gain
Description	Display for TIA gain value.
Selection	0 to 15
Additional information	Transimpedance amplifier (TIA) gain value.

3.7.13 SD card

Navigation Expert → Diagnostics → SD card

▶ SD card	
Spectra log rate	→ 119
Numver of spectra files	→ 119
Validation log level	→ 120
Number of validation files	→ 120

Spectra log rate

Navigation	Expert → Diagnostics → SD card → Spectra log rate
Description	The frequency in which spectra data is saved to the SD card.

Selection	45 to 86400 sec
Factory setting	3600 s
Additional information	Under normal operation, one spectra log file per day will be generated; however, with faster logging rates more than one file each day will be generated.

Number of spectra files

Navigation	 Expert → Diagnostics → SD card → Number of spectra file
Description	Estimated number of spectra files.
User interface	0 to 30
Additional information	The analyzer supports up to 30 spectra log files. Files are saved as FIFO ¹ . For smaller capacity SD cards, the number of files will be less.

Validation log level

Navigation	 Expert → Diagnostics → SD card → Validation log level
Description	Determines the amount of information logged to the validation log file during Heartbeat extended validation.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ Normal ▪ Extended ▪ All
Factory setting	Normal
Additional information	<ul style="list-style-type: none"> ▪ Off. No validation log information is created. ▪ Normal. While validation is measuring; log trend, first/middle/last spectrum and validation results ▪ Extended. Includes Normal log level plus every spectrum while validation is measuring. ▪ All. Includes Extended log level plus every trend and spectrum during purge before and after validation.

Number of validation files

Navigation	 Expert → Diagnostics → SD card → Number of validation files
Description	Current number of validation files saved to the SD card.
User interface	0 to 60
Additional information	For SD cards < 1GB maximum number of files reduced to 30.

¹ FIFO = First in, first out data storage

4 Approval specific factory settings

4.1 SI units

4.1.1 System units

Process variable	Unit
Temperature	°C
Pressure	bar a

4.1.2 Full scale values

NOTICE

The factory settings apply to the following parameters:

- ▶ 20 mA value (full scale value of the current output)
- ▶ 100% bar graph value 1

4.1.3 Output current span

Output	Current range
Current output 1...n	4 to 20 mA NAMUR

4.2 US units

4.2.1 System units

Process variable	Unit
Temperature	°F
Pressure	psi a

4.2.2 Full scale values

NOTICE

The factory settings apply to the following parameters:

- ▶ 20 mA value (full scale value of the current output)
- ▶ 100% bar graph value 1

4.2.3 Output current span

Output	Current range
Current output 1...n	4 to 20 mA US

5 Explanation of abbreviated units

5.1 SI units

Process variable	Units	Explanation
Pressure	Pa a, kPa a, MPa a	Pascal, kilopascal, megapascal (absolute)
	bar	Bar
	Pa g, kPa g, MPa g	Pascal, kilopascal, megapascal (relative/gauge)
	bar g	Bar (relative/gauge)
Temperature	°C, K	Celsius, Kelvin
Time	s, m, h, d, y	Second, minute, hour, day, year

5.2 US units

Process variable	Units	Explanation
Pressure	psi a	Pounds per square inch (absolute)
	psi g	Pounds per square inch (gauge)
Temperature	°F, °R	Fahrenheit, Rankine
Time	s, m, h, d, y	Second, minute, hour, day, year
	am, pm	Ante meridiem (before midday), post meridiem (after midday)

5.3 Imperial units

Process variable	Units	Explanation
Time	s, m, h, d, y	Second, minute, hour, day, year
	am, pm	Ante meridiem (before midday), post meridiem (after midday)

6 Modbus register information

6.1 Notes

References to Modbus refers to Modbus TCP and RS485 devices unless otherwise noted.

6.1.1 Structure of the register information

The individual parts of a parameter description are described in the following section:

Navigation: navigation path to the parameter					
Parameter	Register	Data type	Access type	User interface/ Selection/User entry	→ 
Name of parameter	Indicated in decimal numerical format	Float length = 4 byte Integer length = 2 byte String length, depending on parameter	Possible type of access to parameter: Read access via function codes 03, 04 or 23 Write access via function codes 06, 16 or 23	Options List of the individual options for the parameter Option 1 Option 2 Option 3 (+) (+) = Factory setting depends on country, order options or device settings User entry Specific value or input range for the parameter	Page number information and cross-reference to the standard parameter description

NOTICE

If non-volatile device parameters are modified via the MODBUS function codes 06, 16 or 23, the change is saved in the EEPROM of the measuring device.

- ▶ The number of writes to the EEPROM is technically restricted to a maximum of 1 million.
- ▶ Make sure to comply with this limit since, if it is exceeded, data loss and measuring device failure will result.
- ▶ Avoid constantly writing non-volatile device parameters via the MODBUS.

6.1.2 Address model

The Modbus register addresses of the measuring device are implemented in accordance with the “Modbus Applications Protocol Specification V1.1.” In the Modbus protocols, the addresses are encoded using 16 bits with a number between 0 and 65,535. These are 0-based addresses. Therefore, the Modbus protocol address is equal to the register minus one.

Function code	Access type	Register in accordance with "Modbus Applications Protocol Specification"
03 04 23	Read	XXXX Example: 9455 Concentration
06 16 23	Write	XXXX Example: 2439 Concentration Unit

6.2 Overview of the Expert operating menu

Display interval	3604 to 3605	Float	Read / Write	1 to 10 s	18
Display damping	3554 to 3555	Float	Read / Write	0.0 to 999.9 s	19
Header	3624	Integer	Read / Write	0 = Device tag 1 = Free text	20

Navigation: Expert → System → Display					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Header text	3968 to 3973	String	Read / Write	Max. 12 characters, such as letters, numbers or special characters (e.g., @, %, /)	20
Separator	3671	Integer	Read / Write	1 = point . 2 = comma ,	21
Contrast display	3674 to 3675	Float	Read / Write	20 to 80 %	21
Backlight	3967	Integer	Read / Write	0 = Disable 1 = Enable	21

6.3.1.2 Configuration backup

Navigation: Expert → System → Configuration backup					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Operating time	2631 to 2637	String	Read	Days (d), hours (h), minutes (m) and seconds (s)	22
Last backup	6430 to 6436	String	Read	Days (d), hours (h), minutes (m) and seconds (s)	22
Configuration management	5500	Integer	Read / Write	0 = Cancel 1 = Execute backup 2 = Restore 4 = Clear backup data 5 = Compare	22
Backup state	5502	Integer	Read	1 = Backup in progress 2 = Restoring in progress 4 = Delete in progress 5 = Compare in progress 6 = Restoring failed 7 = Backup failed 251 = None	23
Comparison result	5514	Integer	Read	0 = Settings identical 1 = Settings not identical 2 = No backup available 3 = Check not done 4 = Backup settings corrupt 5 = Dataset incompatible	23

6.3.1.3 Diagnostic handling

Navigation: Expert → System → Diagnostic handling					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Alarm delay	6808 to 6809	Float	Read / Write	0 to 60 s	24

Diagnostic behavior submenu

Navigation: Expert → System → Diagnostic handling → Diagnostic behavior					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Assign behavior of diagnostic no. 302	2312	Integer	Read / Write	0 = Warning 1 = Alarm	25
Assign behavior of diagnostic no. 441	4742	Integer	Read / Write	0 = Off 1 = Logbook entry only 2 = Warning 3 = Alarm	25
Assign behavior of diagnostic no. 444	5120	Integer	Read / Write	0 = Off 1 = Logbook entry only 2 = Warning 3 = Alarm	25
Assign behavior of diagnostic no. 905	30025	Integer	Read / Write	0 = Off 1 = Alarm 2 = Warning 3 = Logbook entry only 4 = Reset	26

6.3.1.4 Administration

Navigation: Expert → System → Administration					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Device reset	6817	Integer	Read / Write	0 = Cancel 1 = Restart device 2 = To delivery settings	26
Transmitter identifier	4510	Integer	Read	1 = 300	27
Activate SW option	2795	String	Read / Write	Max. 10-digit string consisting of numbers.	27
Software option overview	2902	Integer	Read	1 = Extended HistoROM 32768 = Heartbeat Verification 16384 = Heartbeat Monitoring	28

Define access code submenu

Navigation: Expert → System → Administration → Define access code					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Define access code	8677 to 8684	String	Read / Write	Max. 16-digit character string comprising numbers, letters, and special characters	28
Confirm access code	8685 to 8692	String	Read / Write	Max. 16-digit character string comprising numbers, letters, and special characters	28

Reset access code submenu

Navigation: Expert → System → Administration → Reset access code					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Operating time	2631 to 2637	String	Read	Days (d), hours (h), minutes (m) and seconds (s)	29
Reset access code	8880 to 8895	String	Read / Write	Character string comprising numbers, letters, and special characters	29

6.3.2 Sensor**6.3.2.1 Measured values****Measured variables submenu**

Navigation: Expert → Sensor → Measured values → Measured variables					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Concentration	9455 to 9456	Float	Read	0 to 1000000 ppmv	32
Dew point 1	21458 to 21459	Float	Read	Signed floating-point number	32
Dew point 2	21800 to 21801	Float	Read	Signed floating-point number	32
Cell gas pressure	25216 to 25217	Float	Read	Signed floating-point number	33
Cell gas temperature	21854 to 21855	Float	Read	Signed floating-point number	33
Detector reference level	4720 to 4721	Float	Read	0 to 5 mA	33
Detector zero level	9667 to 9668	Float	Read	0 to 5 mA	34
Peak 1 index	9834 to 9835	Float	Read	0.0 to 511.0	34
Peak 1 index delta	30581 to 30582	Float	Read	-511.0 to 511.0	34
Peak 2 index	27600 to 27601	Float	Read	0.0 to 511.0	34
Peak 2 index delta	30672 to 30673	Float	Read	-511.0 to 511.0	34
Peak track index	29018 to 29019	Float	Read	0.0 to 511.0	34
Peak track index delta	28814 to 28815	Float	Read	-511.0 to 511.0	34
Midpoint delta	47236 to 47237	Float	Read	0.0 to 120.0 mA	34

Input values submenu*Current input 1 to n*

Navigation: Expert → Sensor → Measured values → Input values → Current input 1 to n					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Measured values 1 to n	1: 6151 to 6152 2: 6153 to 6154 3: 6155 to 6156	Float	Read	Signed floating-point number	35
Measured current 1 to n	1: 6131 to 6132 2: 6133 to 6134 3: 6135 to 6136	Float	Read	0 to 22.5 mA	36

Value status input 1 to n

Navigation: Expert → Sensor → Measured values → Input values → Value status input 1 to n					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Value status input 1 to n	1: 2746 2: 4699 3: 4700	Integer	Read	0 = Low 1 = High	36

Output values submenu

Value current output 1 to n

Navigation: Expert → Sensor → Measured values → Output values → Value current output 1 to n					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Output current 1 to n	1: 5931 to 5932 2: 5933 to 5934 3: 5935 to 5936	Float	Read	0 to 22.5 mA	36
Measured current 1 to n	1: 5779 to 5780 2: 5781 to 5782 3: 5783 to 5784	Float	Read	0 to 30 mA	36

Switch output 1 to n

Navigation: Expert → Sensor → Measured values → Output values → Switch output 1 to n					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Switch state 1 to n	1: 2485 2: 2486 3: 9917	Integer	Read	1 = Open 6 = Closed	37

Relay output 1 to n

Navigation: Expert → Sensor → Measured values → Output values → Relay output 1 to n					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Switch state	1: 3518 2: 3519 3: 9875	Integer	Read	1 = Open 6 = Closed	38
Switch cycles	1: 7625 2: 7627 3: 7629	Integer	Read	Positive integer	38
Max. switch cycles number	1: 21919 2: 21921 3: 21923	Integer	Read	Positive integer	38

6.3.2.2 System units

Navigation: Expert → Sensor → System units					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Concentration unit	2439	Integer	Read / Write	0 = ppmv 1 = lb/MMscf 2 = %vol	39

Navigation: Expert → Sensor → System units					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
				3 = mg/sm ³ 4 = ppbv 5 = mg/Nm ³ 240 = User conc.	
Temperature unit	2109	Integer	Read / Write	0 = °C 1 = K 2 = °F 3 = °R	39
Pressure unit	2130	Integer	Read / Write	0 = bar 1 = psi a 2 = bar g 3 = psi g 4 = Pa a 5 = kPa a 6 = MPa a 7 = Pa g 8 = kPa g 9 = MPa g	40
Length unit	2087	Integer	Read / Write	44 = ft 45 = m 47 = in 49 = mm 240 = μm	40
Date/time format	2150	Integer	Read / Write	0 = dd.mm.yy hh:mm 1 = mm/dd/yy hh:mm am/pm 2 = dd.mm.yy hh:mm am/pm 3 = mm/dd/yy hh:mm	40

User-specific units submenu

Navigation: Expert → Sensor → System units → User-specific units					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
User concentration text	2585 to 2589	String	Read / Write	Max. 10 characters such as letters, numbers, or special characters (@, %, /)	41
User concentration offset	2490 to 2491	Float	Read / Write	Signed floating-point number	41
User concentration factor	2554 to 2555	Float	Read / Write	Signed floating-point number	41

6.3.2.3 Stream

Navigation: Expert → Sensor → Stream					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Analyte type	21930	Integer	Read / Write	0 = H ₂ O	42

Navigation: Expert → Sensor → Stream					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
				1 = CO2 2 = H2S 3 = CH4 4 = NH3 5 = HCl 6 = O2 7 = CO 8 = SO2 9 = C2H2	
Select calibration	22968	Integer	Read / Write	0 = 1 1 = 2 2 = 3 3 = 4	42
Rolling average number	6876	Integer	Read / Write	1 to 256	42

6.3.2.4 Dew Point

Navigation: Expert → Sensor → Dew point					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Dew point method 1	21595	Integer	Read / Write	0 = Off 1 = ASTM1 2 = ASTM2 3 = ISO 4 = AB	43
Dew point method 2	7631	Integer	Read / Write	0 = Off 1 = ASTM1 2 = ASTM2 3 = ISO 4 = AB	43
Conversion type	21596	Integer	Read / Write	0 = Ideal 1 = Real	43
Pipeline pressure mode	48175	Integer	Read / Write	1 = Fixed value 0 = External value 11 = Current input 1 12 = Current input 2 13 = Current input 3	43
Pipeline pressure fixed	48251 to 48252	Float	Read / Write	Signed floating-point number	44
Pipeline pressure	9483 to 9484	Float	Read / Write	Signed floating-point number	45

Dew point calibration submenu

Navigation: Expert → Sensor → Dew Point → Calibration 1 to n					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Methane CH ₄	26445, 26453, 26461, 26469	Float	Read / Write	0.4 to 1.0 mole fraction	45
Ethane C ₂ H ₆	26317, 26325, 26333, 26341	Float	Read / Write	0.0 to 0.2 mole fraction	45
Propane C ₃ H ₈	26509, 26517, 26525, 26533	Float	Read / Write	0.0 to 0.15 mole fraction	45
Isobutane C ₄ H ₁₀	25486, 25494, 25502, 25510	Float	Read / Write	0.0 to 0.1 mole fraction	45
N-Butane C ₄ H ₁₀	26915, 26917, 26919, 26921	Float	Read / Write	0.0 to 0.1 mole fraction	45
Isopentane C ₅ H ₁₂	27968, 27970, 27972, 27974	Float	Read / Write	0.0 to 0.1 mole fraction	45
N-Pentane C ₅ H ₁₂	26931, 26933, 26935, 26937	Float	Read / Write	0.0 to 0.1 mole fraction	45
Neopentane C ₅ H ₁₂	26923, 26925, 26927, 26929	Float	Read / Write	0.0 to 0.1 mole fraction	45
Hexane+ C ₆ H ₁₄ +	27976, 27978, 27980, 27982	Float	Read / Write	0.0 to 0.1 mole fraction	45
Nitrogen N ₂	25314, 25322, 25330, 25338	Float	Read / Write	0.0 to 0.55 mole fraction	45
Carbon diox. CO ₂	26199, 26207, 26215, 26223	Float	Read / Write	0.0 to 0.3 mole fraction	45
Hydrog.sulf. H ₂ S	26381, 26389, 26397, 26405	Float	Read / Write	0.0 to 0.05 mole fraction	45
Hydrogen H ₂	29191, 29193, 29195, 29197	Float	Read / Write	0.0 to 0.2 mole fraction	45

6.3.2.5 Peak Tracking

Navigation: Expert → Sensor → Peak tracking					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Peak track analyzer control	21460	Integer	Read / Write	0 = Off 1 = On	46
Peak track reset	4727	Integer	Read / Write	0 = Off 3 = Reset	46
Peak track average number	21568	Integer	Read / Write	1 to 3600	46

6.3.2.6 Sensor adjustment

Navigation: Expert → Sensor → Sensor adjustment					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Concentration adjustment	47129	Integer	Read / Write	0 = Off 1 = On	47

Navigation: Expert → Sensor → Sensor adjustment					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Concentration multiplier	47222 to 47223	Float	Read / Write	-1000000 to 1000000	47
Concentration offset	47224 to 47225	Float	Read / Write	Signed floating-point number	48
2f base crv source	28614	Integer	Read / Write	0 = Ref0 curve 1 = Ref0 RT curve	47
2f base RT update	30669	Integer	Read / Write	0 = Cancel 1 = Start	49

Sensor adjustment calibration submenu

Navigation: Expert → Sensor → Sensor adjustment → Calibration					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Laser midpoint default	31090, 31092, 31094, 31096	Float	Read / Write	0 to 120 mA	48
Laser ramp default	26750, 26752, 26754, 26756	Float	Read / Write	0 to 120 mA	48
Laser modulation amplitude default	36077, 36079, 36081, 36083	Float	Read / Write	0 to 100 mA	48

6.3.2.7 Stream change compensation (SCC)

Navigation: Expert → Sensor → Stream change compensation (SCC)					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Calibration 1 to n	35689 to 35692	Integer	Read	1 = No 0 = Yes	49

SCC calibration submenu

Navigation: Expert → Sensor → Sensor adjustment → Calibration (1 to n)					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Methane CH ₄	26445, 26453, 26461, 26469	Float	Read / Write	0.4 to 1.0 mole fraction	51
Ethane C ₂ H ₆	26317, 26325, 26333, 26341	Float	Read / Write	0.0 to 0.2 mole fraction	51
Propane C ₃ H ₈	26509, 26517, 26525, 26533	Float	Read / Write	0.0 to 0.15 mole fraction	51
Isobutane C ₄ H ₁₀	25486, 25494, 25502, 25510	Float	Read / Write	0.0 to 0.1 mole fraction	51
N-Butane C ₄ H ₁₀	26915, 26917, 26919, 26921	Float	Read / Write	0.0 to 0.1 mole fraction	51
Isopentane C ₅ H ₁₂	27968, 27970, 27972, 27974	Float	Read / Write	0.0 to 0.1 mole fraction	51

Navigation: Expert → Sensor → Sensor adjustment → Calibration (1 to n)					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
N-Pentane C ₅ H ₁₂	26931, 26933, 26935, 26937	Float	Read / Write	0.0 to 0.1 mole fraction	51
Neopentane C ₅ H ₁₂	26923, 26925, 26927, 26929	Float	Read / Write	0.0 to 0.1 mole fraction	51
Hexane+ C ₆ H ₁₄ +	27976, 27978, 27980, 27982	Float	Read / Write	0.0 to 0.1 mole fraction	51
Nitrogen N ₂	25314, 25322, 25330, 25338	Float	Read / Write	0.0 to 0.55 mole fraction	51
Carbon diox. CO ₂	26199, 26207, 26215, 26223	Float	Read / Write	0.0 to 0.3 mole fraction	51
Hydrog.sulf. H ₂ S	26381, 26389, 26397, 26405	Float	Read / Write	0.0 to 0.05 mole fraction	51
Hydrogen H ₂	29191, 29193, 29195, 29197	Float	Read / Write	0.0 to 0.2 mole fraction	51

6.3.2.8 Calibration

Navigation: Expert → Sensor → Calibration					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Det. 1 TIA gain	29235	Integer	Read	0 to 15	51
Detector bias	29237 to 29238	Float	Read / Write	Signed floating-point value	51
Flow switch input	4712	Integer	Read / Write	0 = Off 1 = Normally open 2 = Normally closed	51
Flow switch state	29222	Integer	Read	0 = No flow 1 = Flow	51

6.3.3 I/O configuration submenu

Navigation: Expert → I/O configuration					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
I/O module 1 to n terminal numbers	1: 6541 2: 6542 3: 6543	Integer	Read	0 = Not used 1 = 26-27 (I/O 1) 2 = 24-25 (I/O 2) 3 = 22-23 (I/O 3)	52
I/O module 1 to n information	1: 8659 2: 8660 3: 8661	Integer	Read	1 = MODBUS 2 = Configurable 3 = Not configurable 254 = Not plugged 255 = Invalid	52

Navigation: Expert → I/O configuration					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 📄
I/O module 1 to n type	1: 6417 2: 6418 3: 6419	Integer	Read / Write	0 = Off 1 = Current output ¹ 2 = Current input ¹ 3 = Switch output ¹ 5 = Status input ¹ 6 = Relay output ¹	52
Apply I/O configuration	8665	Integer	Read / Write	0 = Yes 1 = No	52
I/O alteration code	6427	Integer	Read/Write	Positive integer	53

6.3.4 Input submenu

6.3.4.1 Current input 1 to n

Navigation: Expert → Input → Status input 1 to n					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 📄

² Modbus TCP only

³ NaN = Not a number

6.3.6.3 Modbus data map

Navigation: Expert → Communication → Modbus data map					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Scan list register 0 to 15	0: 5001 1: 5002 2: 5003 3: 5004 4: 5005 5: 5006 6: 5007 7: 5008 8: 5009 9: 5010 10: 5011 11: 5012 12: 5013 13: 5014 14: 5015 15: 5016	Integer	Read / Write	1 to 65,535	77
Scan list data area 0 to 15	0: 5051 to 5052 1: 5053 to 5054 2: 5055 to 5056 3: 5057 to 5058 4: 5059 to 5060 5: 5061 to 5062 6: 5063 to 5064 7: 5065 to 5066 8: 5067 to 5068 9: 5069 to 5070 10: 5071 to 5072 11: 5073 to 5074 12: 5075 to 5076 13: 5077 to 5078 14: 5079 to 5080 15: 5081 to 5082	Integer / Float	Read / Write	Dependent on scan list register entered	77

6.3.6.4 Web server

Navigation: Expert → Communication → Web server					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Web server language	4219	Integer	Read / Write	0 = English 1 = Français 2 = Italiano 3 = русский язык (Russian) 4 = 中文 (Chinese)	77
MAC address	4210 to 4218	String	Read	Unique 12-digit character string comprising letters and numbers	77
DHCP client	21781	Integer	Read / Write	0 = Off 1 = On	77

Navigation: Expert → Communication → Web server					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
IP address	4155 to 4162	String	Read / Write	4 octet: 0 to 255 (in the particular octet)	77
Subnet mask	4163 to 4170	String	Read / Write	4 octet: 0 to 255 (in the particular octet)	79
Default gateway	4171 to 4178	String	Read / Write	4 octet: 0 to 255 (in the particular octet)	79
Web server functionality	4220	Integer	Read / Write	0 = Off 1 = On 2 = HTML Off	79
Login page	5802	Integer	Read / Write	0 = Without header 1 = With header	79

6.3.7 Diagnostics

Navigation: Expert → Diagnostics					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Actual diagnostic status signal	2075	Integer	Read	0: OK 1: Failure (F) 2: Function check (C) 8: Out of specification (S) 4: Maintenance required (M) 16: --- 32: Not categorized	81
Actual diagnostic number	6801	Integer	Read	0 to 65,535	81
Actual diagnostic service ID	2732	Integer	Read	0 to 65,535	81
Actual diagnostic string	6821 to 6830	String	Read	Diagnostic number, service ID and status signal	81
Previous diagnostics service ID	2734	Integer	Read	0 to 65,535	82
Operating time from restart	2624 to 2630	String	Read	Days (d), hours (h), minutes (m) and seconds (s)	82
Operating time	2631 to 2637	String	Read	Days (d), hours (h), minutes (m) and seconds (s)	82

6.3.7.1 Diagnostic list

Navigation: Expert → Diagnostics → Diagnostic list					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Diagnostics 1	2736	Integer	Read	0 to 65,535	83
Diagnostics 2	2738	Integer	Read	0 to 65,535	83
Diagnostics 3	2740	Integer	Read	0 to 65,535	83
Diagnostics 4	2742	Integer	Read	0 to 65,535	85
Diagnostics 5	2744	Integer	Read	0 to 65,535	85

6.3.7.2 Event logbook

Navigation: Expert → Diagnostics → Event logbook					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Filter options	4596	Integer	Read / Write	0 = Failure (F) 4 = Maintenance required (M) 8 = Function check (C) 12 = Out of specification (S) 16 = Information (I) 255 = All	86

6.3.7.3 Device information

Navigation: Expert → Diagnostics → Device information					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Device tag	2026 to 2041	String	Read	Max. 32 characters, such as letters, numbers, or special characters (e.g., @, %, /).	87
Serial number	7003 to 7008	String	Read	Max. 11-digit character string comprising letters and numbers.	87
Firmware version	7277 to 7280	String	Read	Character string in the format xx.yy.zz	87
Device name	7238 to 7245	String	Read	J22 TDLAS Gas Analyzer	88
Order code	2058 to 2067	String	Read	Character string composed of letters, numbers, and certain punctuation marks (e.g., /).	88
Extended order code 1	2212 to 2221	String	Read	Character string	88
Extended order code 2	2222 to 2231	String	Read	Character string	88
Extended order code 3	2232 to 2241	String	Read	Character string	88
ENP version	4003 to 4010	String	Read	Character string	89

6.3.7.4 Main electronic module + I/O module 1

Navigation: Expert → Diagnostics → Main electronic module + I/O module 1					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Firmware version	7039	Integer	Read	Positive integer	89

Date/time (manually entered)	48598	String	Read	dd.mm.yy hh:mm (Dependent on date/time format selected)	108
Operating time	48608 to 48614	String	Read	Days (d), hours (h), minutes (m), seconds (s)	108
Gas validation	44668	Integer	Read	0 = Failed 2 = Passed 3 = Not done 250 = Not supported 254 = Not plugged	108
Concentration average	48034 to 48035	Float	Read	0 to 1000000 ppmv	109
Concentration standard deviation	36754 to 36755	Float	Read	0 to 1000000 ppmv	109
Concentration maximum	48229 to 48230	Float	Read	0 to 1000000 ppmv	109
Concentration minimum	48596 to 48597	Float	Read	0 to 1000000 ppmv	109

Monitoring results submenu

Navigation: Expert → Diagnostics → Heartbeat Technology → Monitoring results					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Detector reference level	4720 to 4721	Float	Read	0 to 5 mA	110
Peak 1 index delta	30581	Float	Read	-511.0 to 511.0	110
Peak 2 index delta	30672	Float	Read	-511.0 to 511.0	110

6.3.8 Simulation

Navigation: Expert → Diagnostics → Simulation					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Current input 1 to n simulation	1: 6127 2: 6128	Integer	Read / Write	0 = Off 1 = On	110
Value current input 1 to n	1: 6139 to 6140 2: 6141 to 6142	Float	Read / Write	0 to 22.5 mA	110
Current output 1 to n simulation	1: 5939 2: 5940	Integer	Read / Write	0 = Off 1 = On	111
Current output value 1 to n	1: 5995 to 5996 2: 5997 to 5998	Float	Read / Write	0 to 22.5 mA	111
Switch output simulation 1 to n	1: 6223 2: 6224	Integer	Read / Write	0 = Off 1 = On	111
Switch state 1 to n	1: 6227 2: 6228	Integer	Read / Write	1 = Open 6 = Closed	112
Relay output 1 to n simulation	1: 7523 2: 7524	Integer	Read / Write	0 = Off 1 = On	112
Switch state 1 to n	1: 8239 2: 8240	Integer	Read / Write	1 = Open 6 = Closed	112
Device alarm simulation	6812	Integer	Read / Write	0 = Off 1 = On	113
Diagnostic event category	4261	Integer	Read / Write	0 = Sensor 1 = Electronics 2 = Configuration 3 = Process	113
Diagnostic event simulation	4259	Integer	Read / Write	Off Diagnostic event picklist (depends on the category selected)	113

6.3.9 Spectrum plots

Navigation: Expert → Diagnostics → Spectrum plots					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Midpoint default 1 to n	31090, 31092, 31094, 31096	Float	Read / Write	0 to 120 mA	114
Ramp default 1 to n	26750, 26752, 26754, 26756	Float	Read / Write	0 to 120 mA	115
Concentration	9455 to 9456	Float	Read	0 to 1000000 ppmv	115
Dew point 1	21458 to 21459	Float	Read	Signed floating-point number	116
Dew point 2	21800 to 21801	Float	Read	Signed floating-point number	116
Cell gas pressure	25216 to 25217	Float	Read	-0.5 to 6.9 Bar	116
Cell gas temperature	21854 to 21855	Float	Read	-20 to +60 °C	116
Detector reference level	4720 to 4721	Float	Read	0 to 5 mA	116
Detector zero level	9667 to 9668	Float	Read	0 to 5 mA	117
Peak 1 index	9834 to 9835	Float	Read	0 to 511.0	116

Navigation: Expert → Diagnostics → Spectrum plots					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Peak 1 index delta	30581 to 30582	Float	Read	-511.0 to 511.0	117
Peak 2 index	27600 to 27601	Float	Read	0 to 511.0	117
Peak 2 index delta	30672 to 30673	Float	Read	-511.0 to 511.0	117
Peak track index	29018 to 29019	Float	Read	0 to 511.0	117
Peak track index delta	28814	Float	Read	-511.0 to 511.0	118
Midpoint delta	47236 to 47237	Float	Read	0 to 120 mA	118
Analyzer control	21460	Integer	Read / Write	0 = Off 1 = On	118
Reset	4727	Integer	Read / Write	0 = Off 3 = Reset	118
Det. 1 TIA gain	29235	Integer	Read / Write	0 to 15	119

6.3.10 SD card

Navigation: Expert → Diagnostics → Spectrum plots → Chart					
Parameter	Register	Data type	Access	Selection/User entry/User interface	→ 
Spectra log rate	26289 to 26290	Float	Read	45 to 86400 sec	119
Estimated number of spectra files	24902 to 24903	Float	Read	0 to 30	119
Validation log level	29082	Integer	Read / Write	0 = Off 1 = Normal 2 = Extended 255 = All	120
Number of validation files	30879	Integer	Read	0 to 60	120
