

UV (ULTRAVIOLET) SYSTEMS

Disinfection with Ultraviolet Systems is the process for making microorganisms inactive without adding any chemical or oxidant to water

ULTRAVIOLET SYSTEMS STANDARD SPECIFICATIONS

This ultraviolet light breaks the DNA structure of microorganisms and makes them inactive. On average, a 99.9% ratio of disinfection productivity is supplied.

To be able to kill microorganisms with this system, ultraviolet light must directly hit over them. For this reason, before water enters the ultraviolet system, parameters such as sediment and cloudiness must be removed from the water. Sand filter or cartridge filters are recommended to be used before ultraviolet.

To obtain good productivity from ultraviolet units, periodic maintenance is important. UV lamp change once a year and periodic quartz glass cleaning depending on raw water quality must be made. In case, if this cleaning is not done, UV light will be affected and the output of the equipment will decrease.

ULTRAVIOLET SYSTEMS SPECIFICATIONS	E / ES PRO	E / ES Plus	EA
Body: SS 304 Stainless Steel	•	•	
Power Supply: 220 V 50 Hz	•	•	•
Operation Pressure: 8 Bar	•	•	
Lamp Life: 9000 Hours	•	•	•
Lamp Brand: LIGHTTECH (ISO 9001 Certified)	•	•	•
Fault Indicator (E-50 Panel not Included)	•	•	•
Analog Operating Clock (E-50 Panel not Included)	•		•
Electronic Operating Clock		•	
Voice Fault Report		•	
Alarm Relay Outlet		•	•
Warning when the Lamp Life is over		•
