

Plastic tubing, standard O.D.

FESTO

Festo Core Range
Solves the majority of your automation tasks

With the Festo Core Range, we have selected the most important products and functions from our broad product catalogue, and added the quickest delivery.

Worldwide: Quickest delivery – wherever, whenever
Simply good: Expected high Festo quality
Fast: Easy and fast to select

The Core Range offers you the best value for your automation tasks.

Just look
for the
star!

Key features

Application

The requirements for pressure, temperature, flexibility and environmental influences differ from one industry sector to the next. Users frequently underestimate the risks: around 90% of all cases of damage can be traced back to the wrong choice of tubing or tubing materials. This doesn't only result in energy losses, but also in machine downtimes. It is therefore really important to find a reliable and cost-effective product that prevents the tubing getting damaged during operation.

Summary of tubing/fitting combinations

Applications	Tubing	Fitting	Description
Standard	PUN-H	QS	Maximum flexibility in standard applications thanks to an extremely wide range of options for combining the different types.
	PAN	QS	Meets all requirements, even for standard applications with increased pressure and temperature ranges.
	PEN	QS	Suitable for a wide range of tasks and attractively priced. Can be widely used thanks to materials with good resistance, easy to install. High level of abrasion resistance in dynamic applications (e.g. in energy chains).
High pressures	PAN-MF	NPQM	The tubing meets DIN standard 73378: ideal for use in mobile pneumatics. Suitable for increased temperature ranges combined with high pressure ranges.
	PAN-R	NPQH	Powerful in pressure ranges up to 20 bar, for example in applications with the pressure booster DPA.
	PUN-H-SF	NPQR	For applications with increased requirements in terms of robustness, flexibility and pressure resistance. The tubing has maximum flexibility and is resistant to kinking and hydrolysis. The combination is suitable for applications with a high moisture content.
Chemical-resistant, hydrolysis-resistant	PLN	NPQP	Resistant to cleaning agents. Easy-to-clean and economical combination, made from material listed for use in the food zone. Can be used instead of the combination with stainless steel fittings.
	PUN-H	NPCK	Hydrolysis-resistant and suitable for water applications. Corrosion-resistant and made from material listed for use in the food zone.
	PUN-H-F	NPQR	Food-safe to Regulation (EC) No. 1935/2004 and FDA-listed materials. Can be used in the food and packaging industry in combination with fittings NPQR or NPQH. The tubing is hydrolysis-resistant and is suitable for water applications. Extremely flexible and thus easy to install.
	PFAN/PTFEN	NPQH	For high temperatures up to 150°C. Resistant to cleaning agents and made from material listed for use in the food zone.
	PFAN/PTFEN	NPCK	Easy to clean thanks to the union nut's edge-free design. Maximum corrosion resistance (CRC 4), highly resistant to aggressive acids and alkalis, made from material listed for use in the food zone. Suitable for a wide range of media.
PFAN	NPQR	Food-safe to Regulation (EC) 1935/2004 and made from FDA-listed material. For high temperatures up to 150°C. Pressure range up to 1.5 MPa. Maximum corrosion resistance (CRC 4).	
Antistatic	PUN-CM	NPQM	Antistatic tubing plus solid metal fitting: maximum protection for electrical and electronic components.
Flame-retardant	PUN-VO	NPQM	Very safe in areas where there is a risk of fire thanks to flame-retardant properties.
Resistant to welding spatter	PUN-VO-C	NPQH	Ideal in the vicinity of welding spatter and safe thanks to an increased tubing wall thickness for all diameters.
	PAN-VO	QS-VO	Safe even in the vicinity of welding spatter thanks to double-walled tubing with special fitting.
Battery production	PUN-H	NPQE-F1A ¹⁾	Suitable in battery production areas, ideal in combination with push-in connector NPQE-F1A.

1) F1A = Free of copper, zinc and nickel

Note

Ambient conditions and the medium to be transported can have a considerable effect on the service life of plastic tubing. Based on experience, Festo recommends the following time specifications for using plastic tubing in general and in safety-related applications:

- For general applications, a minimum service life of 10 years can be expected.
- We recommend that for safety-related applications the tubing is inspected regularly, at least every 12 months.
- For applications that have an effect on the material, inspections must be carried out at suitable intervals. We recommend that the interval between inspections should be no more than 6 months, at most half of the period in which failures can occur.

Technical data

Note

Tubing that is too long, diameters that are too small, and bending radii that are too small result in flow rate losses. One of the most important rules when selecting tubing is therefore that it should be as long as necessary and as short as possible. Make sure, therefore, that in practice tubing is loosely installed and is not stretched.

Tools for bundling tubing or for avoiding bending/pinching the tubing are available as accessories:

- Tubing strap PB
- Spiral tubing binder PKB
- Tubing support NPAW
- Tubing support PKS
- Multi-tube holder KK

Other accessories include connecting tools for tubing:

- Pipe and tubing cutter ZRS
- Tubing cutter PAN-VOS for flame-retardant plastic tubing PAN-VO
- Connecting pliers ZMS/disconnecting pliers ZDS for connecting/disconnecting the plastic tubing and barbed fitting

Suitability for contact with food

Tubing PFAN and PUN-H-F are suitable for contact with food. They have the necessary declaration of conformity in accordance with EU Regulation (EC) No. 1935/2004.

Measurement method

Flow-relevant bending radius R_d

The tube is bent in the direction of its own curve until the tubing outer diameter is flattened by 5%. R_d is then calculated mathematically. The flow rate is not reduced until R_d is reached.

Cross-section flattened by bending the tube.

d = non-deformed tubing O.D.

d_1 = deformed tubing O.D.

Minimum bending radius R_{min}

The tubing fixed to the base plate is bent until the deformation results in a kink. The measured value is the minimum bending radius R_{min} . This R_{min} results in significant reductions in the flow rate.

1) Please observe the note below.

 Note

Product options in brackets can only be ordered using the modular product system.

Please observe the minimum order quantity for tubing with O.D. ≤ 8 mm is 3000 m and for tubing with O.D. > 8 mm. it is 1500 m.

There is a modular product system for plastic tubing:

- PUN → page 36
- PAN → page 50
- PEN → page 61
- PLN → page 65

Fitting NPQR ¹²⁾	++	++	++	+++	+++	+++	+++	++	++	++	++	++	+	++	+++	+++	+++

+++ Recommended tubing/fitting combination

++ Well suited

+ Limited suitability due to:

- Tubing PLN with fitting CN provides little flexibility

- No conductive contact with PUN-CM

- Incompatible characteristic "resistance to welding spatter" with PUN-VO / PUN-VO-C

- Sub-optimal combination with regard to welding spatter resistance when insulation is removed from double-sheathed tubing PAN-VO

Note: Fitting QS-VO is specially designed for tubing PAN-VO with the insulation removed using tubing cutter PAN-VOS.

With other fittings, there is a gap near the releasing sleeve and the protective function against welding spatter is lost.

There is also an increased risk of the tubing kinking in this area.

However, this risk of kinking can be prevented by ensuring large bending radii when installing the tubing.

- Not suitable

1) For tubing size 4 to 8

2) For tubing size 3 to 8

3) For tubing size 2 to 12, 16 and 22

4) For tubing size 4 to 14

5) For tubing size 4 to 12; 16

6) For tubing size 4 to 12

7) For tubing size 6

8) For tubing size 4 to 10

9) For tubing size 22 and 28 (22 also possible with QS)

10) For tubing size 4 to 12

11) For tubing size 3 to 14

12) For tubing size 4 to 16

Note

Greater force is required when assembling the fittings CK/CN. Expanding the tubing ends using a tapered mandrel makes pushing them on easier.

Datasheet

Plastic tubing PUN

Highly flexible plastic tubing

Material: Polyurethane

Note

The plastic tubing can only be installed in contact with cables if the sheathing is free from phosphoric acid esters. Failure to observe this can result in damage to the plastic tubing.

Datasheet

DUO tubing PUN-DUO

Highly flexible paired plastic tubing that is characterised by excellent resistance to abrasion and kinking. Two lengths of tubing are fused together into a tubing pair. To install it, the tubing pair is separated as required at both ends.

Note

The plastic tubing can only be installed in contact with cables if the sheathing is free from phosphoric acid esters. Failure to observe this can result in damage to the plastic tubing.

Material: Polyurethane

Operating and environmental conditions

Type	PUN-4-...-DUO	PUN-6-...-DUO	PUN-8-...-DUO	PUN-10-...-DUO
O.D. [mm]	4	6	8	10
Pneumatic connection				
For push-in connector [mm]	4	6	8	10
For barbed connector [mm]	3	4	6	–
For barbed connector with union nut [mm]	3	4	6	–
Temperature-dependent operating pressure	[MPa]	–0.095 ... +1 → graph		
	[bar]	–0.95 ... +10		
	[psi]	–13,775 ... +145		
Operating pressure for full temperature range	[MPa]	–0.095 ... +0.7		
	[bar]	–0.95 ... +7		
	[psi]	–13,775 ... +101.5		
Operating medium	Compressed air to ISO 8573-1:2010 [7:--]			
Ambient temperature [°C]	–35 ... +60			
Material fire test	UL94 HB			
Certification	German Technical Control Board (TÜV)			
Certificate-issuing authority	B 013277 0506 00			
Tubing characteristics	Suitable for energy chains			

Operating pressure p as a function of temperature t

Datasheet

Materials

Shore hardness	D 52 ±3
Material of tubing	TPE-U(PU)
Note on materials	RoHS-compliant
Application information	The plastic tubing can only be installed in contact with cables if the sheathing is free from phosphoric acid esters. TPE-U, ester-based
LABS (PWIS) conformity	VDMA24364-B2-L

1) Packaging unit

Datasheet

DUO tubing PUN-H-DUO

Highly flexible paired plastic tubing that is characterised by excellent resistance to abrasion and kinking.

Two lengths of tubing are fused together into a tubing pair. To install it, the tubing pair is separated as required at both ends.

Material: Polyurethane

Operating and environmental conditions

Type	PUN-H-4-...-DUO	PUN-H-6-...-DUO	PUN-H-8-...-DUO	PUN-H-10-...-DUO	
O.D. [mm]	4	6	8	10	
Pneumatic connection					
For push-in connector [mm]	4	6	8	10	
For barbed connector with union nut [mm]	3	4	6	-	
Temperature-dependent operating pressure	[MPa]	-0.095 ... +1 → graph			
	[bar]	-0.95 ... +10			
	[psi]	-13,775 ... +145			
Operating pressure for full temperature range	[MPa]	-0.095 ... +0.6			
	[bar]	-0.95 ... +6			
	[psi]	-13,775 ... +87			
Operating medium	Compressed air to ISO 8573-1:2010 [7:-:-]				
	Water as per manufacturer's declaration ¹⁾				
Suitable for the production of lithium-ion batteries	Metals with more than 1% by mass of copper, zinc or nickel are excluded from use. Exceptions are nickel in steel, chemically nickel-plated surfaces, printed circuit boards, cables, electrical plug connectors and coils.				
Cleanroom class	Element installed statically, no meaningful evaluation possible according to ISO 14644-1				
Ambient temperature [°C]	-35 ... +60				
Food-safe ¹⁾	See supplementary material information				
Material fire test	UL94 HB				
Certification ¹⁾	German Technical Control Board (TÜV)				
Certificate-issuing authority	B 013277 0506 00				
Tubing characteristics	Suitable for energy chains

Operating medium	Compressed air to ISO 8573-1:2010 [7:-:-]	
Ambient temperature [°C]	-30 ... +80	

Operating pressure p as a function of temperature t

Note

When using the pipe cutter ZR to cut tubing to length, we recommend rotating the tube approx. 90° at the start of the cutting process.

Rotating the tube gives a drawing cut so that the tube can be cut with a significantly lower force. This also minimises deformation of the tube.

Datasheet

Plastic tubing PAN-V0

PVC casing, flame-retardant. The tubing casing must be cut to length X (table → 49) before being inserted in the push-in fitting QS-V0.

The tubing cutter PAN-VOS is the perfect tool for this task. The tubing cutter PAN-VOS will always cut the casing to the right length.

For use in the immediate vicinity of welding applications

Material:
Polyvinyl chloride (outer tubing)
Polyamide (inner tubing)

1) Packaging unit

Can only be ordered by the metre.

Variable lengths not available in all countries.

 - Note

Do not bend tubing!

It is crucial that during assembly and operation the tubing is not bent or excessively constricted when using cable binders.

This could damage the tubing and cause it to split at the bend after a short while under normal operating conditions.

Datasheet

Plastic tubing PLN

Polyethylene tubing is characterised by good resistance to chemicals and hydrolysis. It is resistant to most cleaning agents and lubricants.

Material: Polyethylene

Operating and environmental conditions

Type		PLN-4	PLN-6	PLN-8	PLN-10	PLN-12	PLN-14	PLN-16	
O.D.	[mm]	4	6	8	10	12	14	16	
Pneumatic connection									
	For push-in connector	[mm]	4	6	8	10	12	14	16
	For barbed connector	[mm]	3	4	6	–	–	–	–
	For barbed connector with union nut	[mm]	3	4	6	–	–	–	–
Temperature-dependent operating pressure	[MPa]	–0.095 ... +1.4 → graph							
	[bar]	–0.95 ... +14							
	[psi]	–13,775 ... +203							
Operating medium	Compressed air to ISO 8573-1:2010 [7:-:-]								
	Water as per manufacturer's declaration ¹⁾								
Ambient temperature	[°C]	–30 ... +80							
Food-safe ¹⁾	See supplementary material information								
Certification	German Technical Control Board (TÜV)								
Certificate-issuing authority	B 013277 0506 00
