

SPEKTRA DECOR QUARZ

SPEKTRA DECOR QUARZ is a decorative siloxane-based coating used to protect and decorate indoor and outdoor wall surfaces. The results achieved when using this coating attract the attention of even the most inattentive of visitors, and oblige them to observe the sophisticated depths and velvety matt wall surfaces.

The coating is highly vapour permeable, water-repellent and resistant to atmospheric influence. Different manners of applying coating **SPEKTRA DECOR QUARZ** result in a variety of decorative effects; from a strong shading to a soft shading effect only perceivable to an attentive eye, to a uniform velvety matt surface.

Coating **SPEKTRA DECOR QUARZ** offers a wide range of interior uses, as well as when constructing new or renovating old – even heritage-protected – facade surfaces. It is easy to use. Decorative techniques with **SPEKTRA DECOR QUARZ** can also be used on very large surfaces. Its vapour permeability enables the use of decorative techniques on all construction substrates.

SPEKTRA DECOR QUARZ packaging:
2 l – base + 30 shades according to the HGMIX system

Consumption:
1 L covers 5–7 m² of surface in one coat.

Decorative technique system

1. Old and new surfaces must be cleaned of dust, poorly bonded particles or old paint with poor adhesion, all the way to the healthy solid substrate. Check the moisture in the substrate, which must not exceed 3 %, and then impregnate with **SPEKTRA Impregnation Acryl Special** or **SPEKTRA Impregnation Acryl** (thinned with water in a 1 : 3 ratio).
2. Smoothen the surface with **SPEKTRA Level Rough**, **SPEKTRA Level Medium** or **SPEKTRA Level Fine**.
3. After the surface is smoothed, sanded and cleaned of dust, paint with **SPEKTRA Decor Grund** primer to achieve a uniform white surface.
4. Decorative coating **SPEKTRA DECOR QUARZ** should be thinned with up to 10 % water and applied with a wide brush in a crossing technique or a uniform application in all directions. Once the coating starts drying, we recommend “smoothing” it with a soft brush to additionally increase the side-view matt effect and the velvety appearance of the coating. On larger surfaces, it is recommended that the application and smoothing phases be done by two painters to ensure a uniform coat on the entire surface.
