Empower the World

NM8N Moulded Case Circuit Breaker

CHINT , Smart Energy Solution Provider

CHINT is a world renowned smart energy solution provider.

To comply with the trend of integrated development of modern energy, intelligent manufacturing and digital technology, CHINT has adopted One Cloud & Two Nets as the development strategy. As the carrier of intelligent technology and data application, CHINT Cloud fulfills corporate internal and external digital application and services. Relying on the Industrial Internet of Things (IIoT), CHINT builds its intelligent manufacturing system and practices intelligent application of the electrical industry; relying on the Energy Internet of Things (EIoT), CHINT builds its smart energy system and explores the regional EIoT mode.

Focusing on energy supply, storage, transmission, allotment and consumption system, CHINT considers new energy, energy allotment, big data and energy value-added services as core businesses, with photovoltaic equipment, energy storage, power transmission and distribution, low-voltage apparatuses, intelligent terminals, software development and control automation as pillar businesses, to develop the platform enterprise and to build the regional smart energy comprehensive operation management ecosphere, ultimately, to provide the public institutions, industry & commerce and terminal users with a package of energy solutions.

Founded in 1984, CHINT has developed business network in over 140 countries and regions with more than 30,000 employees worldwide. CHINT has reached annual sales of 70 billion yuan in 2018, ranking among the top 50 Asian Listed Companies and the top 100 China Private Enterprises.

CHINT has actively explored overseas markets, has established 3 research and development (R&D) centers in Europe, North America and Asia Pacific, 6 global marketing areas and manufacturing bases in Thailand, Malaysia, Egypt, Singapore and Vietnam.

CHINT has stuck to the industrial development and innovation-driving concept, actively promoting the development of global R&D system. Till 2018, CHINT has won more than 4,000 patent licenses and 5,000 patent applications, on top of that, CHINT led the formulation of 185 industrial and national standards, and won 32 national and provincial science and technology awards.

CHINT has unwaveringly adhered to people-oriented and value-sharing culture with the mission of "making the electric power even safer, green, convenient and efficient". CHINT builds its image of green, energy-saving, sustainable innovation, reliability comprehensiveness, and win-win cooperation with "custom-

er-focused, innovation, humble learning, integrity, collaboration, responsibility" as core values, and "creating values for customers, seeking career development of employees and taking on responsibilities for the society" as operation concepts.

CHINT has positively taken on its social responsibilities. It has successively invested and set up "CHINT Moral Quality and Academic Excellent Scholarship for Chinese Middle School Students", "CHINT Education Fund for Impoverished Undergraduates of Zhejiang Province", and initiated the establishment of "China Red Ribbon Foundation". CHINT has invested 90million yuan to establish the "Commonweal Foundation of CHINT". So far CHINT has donated more than 300million yuan for social welfare undertakings such as education donation, earthquake resistance and disaster relief, social welfare entrepreneurship, ecological and environmental protection.

Through the technological innovation and remarkable contribution to the industry, CHINT has successively won honors and titles such as "China Grand Awards for Industry", "National Quality Management Award", "China Outstanding Private Scientific and Technological Enterprise", "Top 10 Enterprises with the most Core Competitiveness of China Machinery Industry" and "China Charity Award" and "China Charity Award", etc.

CHINT “One Cloud & Two Nets” Strategy

CHINT Cloud

The carrier of intelligent technology and data application in connecting enterprise internal manufacturing and business management data and fulfilling corporate internal and external digital application and services.

CHINT EIoT

A user-driven multi-energy complementary intelligent energy system, providing the public institutions, industry & commerce and terminal users with a package of energy solutions.

CHINT IIoT

An intelligent manufacturing system focusing on the enterprise digital transformation, building and developing a flexible, efficient and intelligent industrial system.

CHINT EIOT

A user-driven multi-energy complementary intelligent energy system, providing the public institutions, industry & commerce and terminal users with a package of energy solutions.

CHINT IIoT

Intelligent manufacturing system focusing on the enterprise digital transformation

- The first group of Sino-Germany Intelligent Manufacturing Cooperation Pilot Demonstration Projects made public by the Ministry of Industry and Information Technology
- "PV manufacturing+Internet" transparent factory opened up to the worldwide users
- One of 94 new intelligent manufacturing mode application projects made public in 2015
- Intelligent manufacturing integration system
- Big data full-process tracking
- Full-process automatic quality monitoring

The Thinking Factory

— in Hangzhou

The Transparent Internet Factory

— in Haining

The Digital Electric Apparatus Plant

— in Wenzhou

Reliable quality, Best-selling Worldwide

- 3 global R&D centers : Europe, North America, Asia Pacific
- 6 worldwide marketing areas : Asia Pacific, Western Asia and Africa, Europe, Latin America, North America, China
- 13 manufacturing bases : China (Wenzhou, Shanghai, Hangzhou, Jiaying, Xianyang, Jiuquan, Jinan), Thailand, Egypt, Singapore, Vietnam, Malaysia, Algeria (production line)
- 20 overseas subsidiaries
- 16 marketing offices in China
- 32 international logistics centers
- 2300 sales companies

CHINT Honors

Comprehensive Strength

- 2015, top 100 enterprises in China machinery industry
- 2016, top 100 enterprises of Zhejiang Province
- 2017, ranking the 85th place among top 500 China private enterprises
- 2017, innovative leading enterprise of Zhejiang Province
- 2017, top 100 enterprises in innovation capacity among the national hi-tech enterprises of Zhejiang Province

Independent Innovation

- 2015, Science and Technology Award of China Electrotechnical Society
- 2016, Golden Patent Prize of Zhejiang Province and Patent Recognition Award of Zhejiang Province for two serial products
- 2016, national intellectual property demonstration enterprise
- 2016, group member of China Intellectual Property Society
- 2016, member of Global Energy Interconnection Development and Cooperation Organization

Quality Management

- 2016, advanced unit and user-satisfied enterprise in national user satisfaction project
- 2016, executive director unit of Asia Quality Function Development Association
- 2017, quality good faith enterprise of China machinery industry
- 2017, national product and service quality good faith demonstration enterprise

Social Responsibilities

- 2014, five-star enterprise of China industry sector in performing social responsibilities
- 2016, National Enterprise of Observing Contract and Valuing Credit
- 2017, credit management demonstration enterprise of Zhejiang Province
- 2018, the 10th "China Charity Award" of the Ministry of Civil Affairs

Qualification Certification

The products have been accredited through China Compulsory Certification (CCC) as well as UL of US, CE of EU, VDE and TÜV of Germany, EAC of Russia, KEMA of Netherlands, RCM of Australia, RCC of South Africa and other international product certifications.

1. General

NM8N series moulded case circuit breaker is suitable for the circuit of AC 50/60Hz, with rated voltage AC690V and below, DC system rated voltage DC1000V and below, and rated current of 16A and 1600A. It can protect circuits and electric equipment against overload, short circuit or undervoltage, and can also provide protection of overload, short circuit and under voltage for infrequent start of motor.

Products have functions of power distribution protection, motor protection, residual current protection and isolation.

The circuit breaker can be installed vertically, installed horizontally and can also enter the line from the bottom.

Standards compliant:

IEC 60947-1 general rules for low-voltage switchgear and control equipment;

IEC 60947-2 low-voltage switchgear and control equipment circuit breakers;

IEC 60947-3 low-voltage switchgear and control equipment switches, disconnectors and fuse combination appliances;

IEC 60947-4-1 Electromechanical contactors and motor starters

(including motor protectors) for low voltage switchgear and control equipment

2. Operating conditions

2.1 Temperature:

Operating and storage temperature is $-40^{\circ}\text{C}\sim+70^{\circ}\text{C}$; the average value within 24 hours does not exceed $+35^{\circ}\text{C}$; when the ambient temperature is $-40^{\circ}\text{C}\sim+70^{\circ}\text{C}$, users need to consider derating or temperature compensation whose details can be referred to in Page

2.2 Altitude: $\leq 2000\text{m}$;

2.3 Pollution grade: Grade 3;

2.4 IP grade: IP40

2.5 Air conditions:

At mounting site, relative humidity not exceed 50% at the max temperature of $+40^{\circ}\text{C}$, higher relative humidity is allowable under lower temperature. For example, RH could be 90% at $+20^{\circ}\text{C}$, special measures should be taken to occurrence of dews.

3. Type designation

3.1 NM8N Moulded Case Circuit Breaker and Switch Disconnecter

3.2 NM8NL Residual Current Circuit Breaker

Setting current (A) $I_{IN} = I_n \times$	/	10	/	The same with the other three-phase poles.				
Accuracy	±20%							

5.1.2 Basic electronic type release for power distribution EN

EN electronic trip unit has three-stage protection of overload, short circuit short time-delay and short circuit instantaneous protection.

Electronic type EN		250	400	630	800	1600
Over-load long-time delay protection	Setting current $I_r = I_n \times$	0.4-0.5-0.6-0.7-0.8-0.9-0.95-1.0				
	$6I_r$, Tripping time T_r (s)	3-6-12-18, Accuracy ±10%				
Short circuit short-time delay protection	Setting current $I_{sd} = I_r \times$	1.5-2-3-4-6-8-10, OFF, Accuracy ±15%				
	Tripping time T_{sd} (s)	0.1-0.2-0.3-0.4, Accuracy ±20% or ±40ms(higher value will be selected)				
Short circuit instantaneous protection	Setting current $I_i = I_n \times$	2-3-4-6-8-10-12, OFF, Accuracy ±15%				
	Max. tripping time (ms)	60				
Neutral line protection	Setting current	$I_{IN} = (0.5, 1) \times I_n$, OFF; $I_{sdIN} = (1.5-2-3-4-6-8-10) I_{IN}$				
	Tripping time (s)	$I_{IN} = (2-3-4-6-8-10-12) I_{IN}$				
		The same with the other three-phase poles.				

- Overload protection and tripping time setting
—The current value I_r can be adjusted according to the user's needs. The tripping time T_r is at the status of $6I_r$.
- Short circuit short-time delay protection and trip time setting
—The current value I_{sd} can be adjusted according to the user's needs. Tripping time T_{sd} is the short-circuit short time-delay tripping time, which can be adjusted according to user needs.
- Short circuit instantaneous protection characteristics setting
—The current value I_i can be adjusted according to the user's needs.
- Neutral line protection feature setting

The four-pole circuit breaker N-pole protection current value can be adjusted according to user needs. The N pole tripping time is the same with the other three-phase poles.

5.1.3 Standard electronic type release for power distribution EM

EM release has four-stage protection of overload, short circuit short-time delay, short circuit instantaneous protection and earth fault, with real-time current display, protection parameter information display, fault information display and parameter setting function

Electronic type EM		250	400	630	800	1600
Over-load long-time delay protection	Setting current $I_r=I_n \times 6I_r$	0.4~1.0, Stepping1A				
	Tripping time $T_r(s)$	3~18, 1s, Accuracy $\pm 10\%$				
Short circuit short-time delay protection	Setting current $I_{sd}=I_n \times$	1.5~10, Stepping1A, OFF, Accuracy $\pm 15\%$				
	Tripping time $T_{sd}(s)$	0.1-0.2-0.3-0.4, Accuracy $\pm 20\%$ or $\pm 40ms$ (higher value will be selected)				
Short circuit instantaneous protection	Setting current $I_i=I_n \times$	1.5~12, Stepping1A, OFF, Accuracy $\pm 15\%$				
	Max. tripping time (ms)	60				
Earth fault protection	Setting current $I_g=I_n \times$	0.4-0.5-0.6-0.7-0.8-0.9-1.0, OFF, Accuracy $\pm 15\%$				
	Tripping time (s)	0.1-0.2-0.3-0.4, Accuracy $\pm 15\%$				
Neutral line protection	Setting current	$I_{nN}=(0.5,1) \times I_n$; $I_{sdN}=(1.5 \sim 10)I_{nN}$; $I_{iN}=(1.5 \sim 12)I_{nN}$ 可 OFF				
	Tripping time (s)	The same with the other three-phase poles.				

- Overload protection and tripping time setting
 - Current setting value I_r , the user can adjust the range according to the \uparrow and \downarrow buttons on the panel, the range is $(0.4 \sim 1.0) I_n$, and the tripping time T_r is at the status of $6I_r$, which can be adjusted according to user needs.
- Short circuit short-time delay protection and tripping time setting
 - The current setting value I_{sd} can be adjusted according to the user's needs, and the "OFF" indicates function can be turned off. Tripping time T_{sd} is the short-circuit short-time delay tripping time, which can be adjusted according to user needs.
- Short circuit instantaneous protection characteristics setting
 - The current setting value I_i can be adjusted according to the user's needs, and the "OFF" indicates function can be turned off.
- Neutral line protection feature setting
 - Neutral line protection of the four-pole circuit breaker (current setting value I_{nN}), the setting range is $0.5I_n$, $1I_n$ or OFF, which can be adjusted according to the user's needs. The "OFF" position indicates that the N pole has no protection function.
- Earth fault protection
 - Earth fault I_g can be adjusted according to user needs, where the "OFF" means the function can be turned off.

5.2 Protection for motor

5.2.1 Motor starting characteristics

At present, most of the motors use three-phase asynchronous induction motors, and a large part of them use the direct start mode, namely, the electric energy does not take artificial restriction measures, and directly feeds to start the motor, which is also called full-pressure start. When the asynchronous motor is directly started, a high starting current of 4 to 7 times of the rated current occurs. The reason why the asynchronous motor has a large starting current is that the motor has certain inertia, and the rotor speed cannot be immediately changed to the rated speed after starting. At this time, the relative rotational speed of the rotating magnetic field of the stator (synchronous speed of the motor, slightly higher than the rated speed) is large. The rotor winding cuts the stator magnetic field at a large speed to generate a large current; at the same time, the magnetic field generated by the large current of the rotor in turn induces the stator winding, so that the current also rapidly increases.

Startup parameter

Rated current (I_n): current value of the motor under rated operation

Starting current (I_d): The current when the motor starts, its magnitude varies with different conditions, the average value is $7.2 \times I_n$

Start peak current (I_d'): Transient current during the first two half-waves after the motor is powered on, typically $14 \times I_n$

Start-up time (t_d): generally $0.5 \sim 20s$, which refers to the time when the motor has starting current

Direct startup impact on the protection device

For circuit breakers with magnetic protection, if the conventional current of the magnetic trip unit is set incorrectly, the circuit breaker will mistake the start current of the motor for short-circuit current, causing the circuit breaker to malfunction. For the independent thermal relay, the heat generated by the large starting current during the motor starting phase will also cause the relay to trip. For the contactor, if the motor needs electric or regenerative braking, it needs to be able to be broken during the motor starting phase. It generally needs to derate, in order to avoid the malfunction of the protection device caused by the start current:

The inverse time characteristic curve of the independent thermal relay is required to be completely above the starting current.

The short-circuit current trip setting of the circuit breaker with magnetic protection should be greater than the peak starting current of the motor.

5.2.2 Protection solution

The NM8N Series offers start-up, control and protection solutions for two three-phase asynchronous motors:

Three-component solution

Electromagnetic protection circuit breaker + contactor + thermal relay

Among them, the electromagnetic protection circuit breaker is used for short circuit protection, the contactor is used for motor operation, and the thermal relay is used for overload, phase loss and phase unbalance protection.

1) Magnetic release M

The electromagnetic protection circuit breaker has a current range of 125~800A, an adjustable range of 9~14In and an accuracy of 20%. It is especially suitable for use in the classic three-component protection solution.

Magnetic M	125	250	400	630	800
Pole	3P/4P	3P/4P	3P/4P	3P/4P	3P/4P
Short circuit instantaneous protection					
Setting current (A) $I_i=I_n \times$	12	9-10-11-12-13-14			
Accuracy	±20%				
N pole protection					
Setting current (A) $I_{iN}=I_n \times$	12	The same with the other three-phase poles. I_i			
Accuracy	±20%				

Two-component solution

Integrated protection electronic circuit breaker + contactor

In the two-component solution, there is no need to use the thermal relay, and the integrated protection electronic circuit breaker has the functions of overload, phase loss, phase unbalance protection and short circuit protection. The integrated protection electronic circuit breaker not only has high tripping precision, but also has reliable operation. The two-component solution consisting of contactors and the installation time can be saved without being affected by the ambient temperature.

2) Integrated protection: Basic electronic type release for motor protection ENM

The ENM electronic trip unit allows for tighter tolerance trip times, as detailed in the table below.

Electronic type ENM		250	400	630	800
Overload long-time delay protection	Setting current $I_i=I_n \times$	0.4-0.5-0.6-0.7-0.8-0.9-1.0, OFF			
	7.2I, Tripping time T_i (s)	4, 8, 16, Accuracy ±10%	48, 16, 24, Accuracy ±10%		
	Tripping level	5, 10, 20	5, 10, 20, 30		
Short circuit short-time delay protection	Setting current $I_{sd}=I_n \times$	5-6-8-9-10-11-12, OFF, Accuracy ±15%			
	Tripping time T_{sd} (ms)	100, Accuracy ±40			
Short circuit instantaneous protection	Setting current $I_i=I_n \times$	15 ¹⁾			
	Max. tripping time (ms)	60			
Phase unbalance/Phase failure I_{unbal}		30%-40%-50%-60%-70%-80%-90% (Phase failure)-OFF			
Max. trip time of phase imbalance (s)		4-6-8-10, Accuracy ±10%			
Tripping time of phase failure (s)		0.25, Accuracy ±20%			
Neutral line protection	Setting current	$I_{iN}=(0.5,1) \times I_{iN}$; $I_{sdN}=(5-6-8-9-10-11-12)I_{iN}$ $I_{iN}=15I_{iN}$, OFF			
	Tripping time	The same with the other three-phase poles			

Note: ¹⁾ Setting current $I_{sd} < I_i$ (within tolerance).

3) Integrated protection: Standard electronic type release for motor protection EMM

The EMM electronic release not only has the protection function of the ENM release, but also adds ground fault protection and stall protection. Moreover, it can also display real-time current, display protection parameter information, display fault information, and have parameter setting function.

Electronic type EMM		250	400	630	800
Overload long-time delay protection	Protection current $I_i=I_n \times$	0.4~1.0 , Stepping1A, OFF			
	7.2I, Tripping time T_i (s)	4, 8, 16, Accuracy ±10%	4, 8, 16, 24, Accuracy ±10%		
	Tripping level	5, 10, 20	5, 10, 20, 30		
Short circuit short-time delay protection	Protection current $I_{sd}=I_n \times$	4~12, Stepping1A, OFF, Accuracy ±15%			
	Tripping time T_{sd} (ms)	100, Accuracy ±40			
Short circuit instantaneous protection	Protection current $I_i=I_n \times$	15 ¹⁾			
	Max. tripping time(ms)	60			
Earth fault protection	Protection current $I_g=I_n \times$	0.4-0.5-0.6-0.7-0.8-0.9-1.0 , OFF, Accuracy ±15%			
	Tripping time (s)	0.1-0.2-0.3-0.4, Accuracy ±20% or 40ms(higher value will be selected)			
Phase unbalance/Phase failure I_{unbal}		30%-40%-50%-60%-70%-80%-90%(Phase failure)-OFF			
Max. trip time of phase imbalance (s)		4-6-8-10, Accuracy ±10%			
Tripping time of phase failure (s)		0.25, Accuracy ±20%			
Locked-rotor current I_{jam}		(3~10)I _n , Stepping1A, OFF(Default), Accuracy ±15%			
Tripping time T_{jam} (s)		1~30, Step size1s, Defalut 5, Accuracy ±10%			
Neutral line protection	Setting current	$I_{iN}=(0.5,1) \times I_{iN}$, OFF; $I_{sdN}=(4~12)I_{iN}$; $I_{iN}=15I_{iN}$, OFF			
	Tripping time	The same with the other three-phase poles.			

Note: ¹⁾ Setting current $I_{sd} < I_i$ (within tolerance).

8.8 Wiring

9. Accessories characteristics and installation

NM8N moulded case circuit breaker has various accessory modules, which can be found in P84 for more details

9.1 AX Auxiliary contact

9.1.1 Function

Remotely indicate the circuit breaker's making (on) or breaking / tripping (OFF) status, connected to the auxiliary circuit of the circuit breaker.

9.1.2 Model description

AX 21-M8

9.1.3 Indication of circuit breaker status

Circuit breaker is at breaking status	
Circuit breaker is at making status	

9.1.4 Electrical characteristics

Rated voltage (V)	Rated current (A)	
	AC-15	DC-13
AC 110	5	—
AC 240	4	—
AC 415	2	—
DC 110	—	0.25
DC 220	—	0.25

9.1.5 Wiring diagram

9.2 AL Alarm contact

9.2.1 Function

It is mainly used to provide a signal when the load of the circuit breaker is overloaded, short-circuited or undervoltage, or tripped.

The reasons for the failure of the alarm signal are:

- Over-load or short-circuit
- Undervoltage trip
- Residual current action trip
- Manual free trip

9.2.2 Model description

AL 21-M8

9.2.3 Indication of circuit breaker status

Circuit breaker is at breaking or making status	B12		B11
Circuit breaker is at free tripping status	B12		B11

9.2.4 Electrical characteristics

	AC-15	DC-13
AC 110	5	—
AC 240	4	—
AC 415	2	—
DC 110	—	0.25
DC 220	—	0.25

9.2.5 Wiring diagram

9.3 SHT Shunt release

9.3.1 Function

Shunt releases operate according to electrical signals, enabling remote control and automatic control of circuit breakers. When the supply voltage is equal to any voltage between 70% and 110% of the rated control power supply voltage, the shunt release should enable the circuit breaker to operate reliably.

9.3.2 Model description

SHT 21-M8 AC48V

9.3.3 Electrical characteristics

Frame size	Power consumption (W)						
	AC48V	AC110V	AC220-240V	AC380-415V	DC24V	DC48V	DC220V
125A	2.2	2.2	2	2.5	2.5	2.2	2
250/400/630A	2.3	2.5	2.2	2.5	2.2	2.5	2.5
800A	2.3	2.5	2.2	2.5	2.2	2.5	2.5
1600A	110	195	480	560	230	110	160

9.3.4 Action characteristics

Can be powered for a long time. Response time: pulse type $\geq 20\text{ms}$, $\leq 60\text{ms}$

9.3.5 Wiring diagram

Note : When the rated control power supply voltage DC24V shunt release is used, the maximum length of the copper wire (each of the two wires) must meet the following table:

Rated control supply voltage U_s (DC24V)	Conductor cross-sectional area	
	1.5mm ²	2.5mm ²
100% U_s	150m	250m
85% U_s	100m	160m

9.4 UVT Under-voltage release

9.4.1 Function

Realize the under-voltage protection function of the circuit breaker, open the circuit breaker when the power supply voltage is too low, and protect the electrical equipment.

- When the supply voltage drops (even slowly) to 70% to 35% of the rated control supply voltage, the undervoltage trips The breaker should open the circuit breaker reliably.
- When the supply voltage is equal to or greater than 85% of the rated control supply voltage of the undervoltage release, the circuit breaker should be guaranteed to close.
- When the supply voltage is less than 35% of the rated control supply voltage of the undervoltage release, the undervoltage release should prevent the circuit breaker.

9.4.2 Model description

UVT 21-M8 AC48V

9.4.3 Electrical characteristics

Frame size	Power consumption (W)							
	AC48V	AC110V	AC220-240V	AC380-415V	DC24V	DC48V	DC110-120V	DC220V
125A	1.6	1.6	2	3	1.2	1.6	2	2.2
250/400/630A	1.5	1.5	2.2	3	0.8	1.5	2	2.5
800A	1.5	1.5	2.2	3	0.8	1.5	2	2.5
1600A	2.6	2.2	1.7	0.7	2.8	2.5	2.2	1.8

9.4.4 Wiring diagram

9.5 MOD Motor-driven mechanism

9.5.1 Function

It is suitable for closing, opening and re-opening of circuit breakers at long distances, as well as automation applications.

A: Protection level: IP40

- Reliable insulation;
- With isolation function indication;
- O (open), I (closed) and free trip 3 position indications;
- Free circuit breaker trip;
- Manually or automatically operated circuit breakers for closing and opening.

B: manual operation

Pull the "manual / auto" switch to the manual position and turn the operation handle to switch on and off the circuit breaker.

C: automatic operation

Pull the "manual / auto" switch to the automatic position, and remotely press the "close or open" button to switch on and off the circuit breaker.

D: Automatically switch on or off by pulse or self-holding signal control.

E: Only when the control voltage is $\geq 85\% U_n$ and $\leq 110\% U_n$ can the circuit breaker be reliably switched on and off.

9.5.2 Model description

MOD 21-M8 AC110V/DC110-120V

Note: The 1600 frame motor-driven mechanism is assembled in the factory and is suitable for electronic circuit breakers and disconnectors according to the inside of the circuit breaker.

9.5.3 Electrical characteristics

Frame size	Rated operational voltage	Life(CO recycle)	Power consumption	Action current	Making duration	Breaking duration	Minimum duration of ON (OFF) signal pulse
125A	AC110V/DC110-120V AC220-240V/DC220V AC380-415V DC24V	10000	150 VA	$\geq 3A$	$\leq 500ms$	$\leq 500ms$	300ms
250A		10000	150 VA	$\geq 3A$	$\leq 500ms$	$\leq 500ms$	300ms

9.6 SRH Economic extended rotary handle

9.6.1 Function

The unique design and transmission structure are adopted to realize the closing, opening and re-closing operation of the circuit breaker by rotating the handle. Protection degree: IP30

Protection degree: IP30

- With isolation function indication;
- O (open), I (closed) and free trip 3 position indications;
- The circuit breaker can be locked in the OFF position with 1 ~ 3 padlocks with a diameter of 5 ~ 8mm. At this time, it can prevent the circuit breaker from closing and the switch cabinet from opening;
- When the switch is in the ON position, the cabinet door cannot be opened under the action of the rotary handle (if the cabinet door is opened urgently, the cabinet door can be opened by the emergency unlocking device on the handle).

9.8 ERH Extended rotary handle

9.8.1 Function

The unique design and transmission structure are adopted to realize the closing, opening and re-closing operation of the circuit breaker by rotating the handle.

Protection degree: IP50

- Reliable insulation;
- With isolation function indication;
- O (open), I (closed) and free trip 3 position indications;
- When the switch cabinet door is open, the setting value of the circuit breaker release can be set;
- When the switch cabinet door is opened, it can prevent the circuit breaker from closing;
- The circuit breaker can be locked in the OFF position through (1 ~ 3) padlocks with a diameter of (5 ~ 8) mm;
- (Padlock user prepared) can prevent the switch cabinet door from opening at this time;
- When the switch is in the ON position, the cabinet door cannot be opened under the action of the rotary handle (if the cabinet door is opened urgently, the cabinet door can be opened by the emergency unlocking device on the handle).

9.9 LHD Extended handle

9.9.1 Function

With a unique design, the circuit breaker can be closed, opened and re-latched by rotating the handle. It is only applicable to 1600A.

9.9.2 Model description

LHD 25-M8

9.9.3 Overall dimension

9.10 KLK Locking system

9.10.1 Function

The locking system locks the open position of the circuit breaker.

- The locking system can be equipped with (1 ~ 3) padlocks with a diameter range (5 ~ 8) mm.
- (Padlock user prepared))

9.10.2 Model description

KLK 21-M8

9.11 MIT Mechanical interlock

9.11.1 Function

When used together with two circuit breakers with the same housing, when one circuit breaker is closed, the other circuit breaker cannot be closed and is in the open state.

9.11.2 Model description

MIT 21-M8 3P

9.12 TCV Short terminal cover

9.12.1 Function

Prevents contact with the main circuit and can also be used to prevent short circuit between phases.

Protection degree: IP40

For voltages $\geq 500V$, terminal covers must be fitted

9.11.2 Model description

TCV 21-M8 3P

9.13 TCE Long terminal cover

9.13.1 Function

Prevents contact with the main circuit and can also be used to prevent short circuit between phases. There are knock-out holes in front of the terminal cover to accommodate various lug cables and front wiring.

Protection degree: IP40

For voltages $\geq 500V$, terminal covers must be fitted

9.13.2 Model description

TCE 21-M8 3P

9.14 FCP Front connection plate

9.14.1 Function

Make the circuit breaker have a flexible wiring mode. By installing this accessory, the pole spacing can be increased to increase the electrical gap between adjacent poles at the inlet and outlet ends of the circuit breaker and enhance the safety between lines.

9.14.2 Model description

FCP 25-M8 3P(1600¹⁾)

Note¹⁾: Only applicable to 1600 frame, there are three specifications of 1000, 1250, 1600

9.15 RCP Rear connection plate

9.15.1 Function

Make the circuit breaker have flexible wiring mode, which can realize the wiring behind the board

9.15.2 Model description

RCP 21-M8 2P

9.16 CCT Cage clamp terminal

9.16.1 Function

Make the circuit breaker have a flexible wiring mode, which can directly connect the bare wires.

9.16.2 Model description

CCT 21-M8

9.16.3 Wiring capacity

Serial No.	Wiring capacity	Torque
CCT21-M8	(2.5~75)mm ²	8N·m
CCT22-M8	(10~120)mm ²	10N·m
CCT23-M8	(120~240)mm ²	35N·m

9.17 MC Cable connector

9.17.1 Function

Make the circuit breaker have a flexible wiring method, which can directly connect the bare wires and realize the connection of multiple wires.

9.17.2 Model description

MC 25-M8(3)(1250¹⁾)

Note¹⁾: Only applicable to 1600 housing, only 800-1250 specifications

9.17.3 Wiring capacity

Serial No.	Wiring capacity	Torque	Note
MC21-M8 (1)	(16~95)mm ²	10N·m	1hole
MC22-M8 (1)	(35~240)mm ²	30N·m	1hole
MC22-M8 (2)	2x(35~120)mm ²	30N·m	2holes
MC22-M8 (6)	6x(10~35)mm ²	10N·m	6holes
MC23-M8 (2)	2x(120~240)mm ²	35N·m	2holes
MC23-M8 (4)	4x95mm ²	15N·m	4holes
MC24-M8 (2)	2x240mm ²	35N·m	2holes
MC25-M8(800) (3)	3x(95~300)mm ²	35N·m	3holes
MC25-M8(1000/1250) (4)	4x(95~240)mm ²	35N·m	4holes

9.18 PIA Plug-in base

9.18.1 Function

- Quickly change the circuit breaker without changing the inlet and outlet wires and installing the base;
- Plug-in base can be pre-installed, which is convenient for customers to add circuit breakers in the future;
- When the circuit breaker is installed through the board or the base, the power circuit can be isolated;
- With plug-in safety device function (optional), it can ensure that the circuit breaker can trip automatically when it is pulled out when the circuit breaker is closed.

9.18.2 Model description

PIA 21F-M8 3P

9.19 PISDPISD Plug-in safety device

9.19.1 Function

Used together with the plug-in base, it can ensure that the circuit breaker can automatically trip when it is pulled out when the circuit breaker is closed.

9.19.2 Model description

PISD 21-M8 T

9.20 DOB Draw-out base

9.20.1 Function

- Quickly change the circuit breaker without changing the inlet and outlet wires and installing the base;
- Withdrawable base can be installed in advance to provide convenience for customers to add circuit breakers later;
- With plug-in safety device function (optional), it can ensure that the circuit breaker can automatically trip when it is pulled out when the circuit breaker is closed.

9.20.2 Model description

DOB 23F-M8 3P(400A)¹⁾

Note¹⁾: DOB23 is suitable for 400/630 housings. There are two specifications of 400 and 630.

9.21 DOSD Draw-out safety device

9.21.1 Function

Used together with the plug-in base, it can ensure that the circuit breaker can automatically trip when it is pulled out when the circuit breaker is closed.

9.21.2 Model description

DOSD 23-M8 T

9.22 DRA DIN-rail adapter

9.22.1 Function

Adapt to the body and can be mounted on a 35mm standard DIN rail

9.22.2 Model description

DRA 21-M8 3P

9.23 COMA communication module

9.23.1 Function

The COMA communication module is an interface module for the communication between the electronic plastic case circuit breaker and the bus system, and performs communication and relay control output. Combined with the Modbus-RTU communication protocol, this communication module can easily establish a connection with a fieldbus master device to achieve three remote or four remote functions.

The technical parameters are as follows:

- Rated voltage: AC230V or DC24V (error range ± 15%)
- Communication type: RS485 (Modbus-RTU protocol)
- Contact capacity: AC250V / 3A; DC30V / 3A
- Transmission medium: shielded twisted pair
- Transmission distance: 1.2km (using category A shielded twisted pair)
- Working status indication: LED indication
- Number of stations: 1 station

9.23.2 Model description

COMA22-M8 DC24V

9.23.3 Communication solution

Solutions	Achievable function	Required products and accessories	Note
Solution 1	Remote measure	NM8N basic or standard electronic molded case circuit breaker; COMA22-M8 communication module.	1. Read phase current
Solution 2	Remote measure Remote signal	NM8N basic or standard electronic moulded case circuit breaker; COMA22-M8 communication module; AX auxiliary contact (optional, indicating opening and closing status); AL alarm contact (optional, indicating trip status).	1. Read phase current 2. Indicate circuit breaker position information (open, closed, trip status)
Solution 3	Remote measure Remote signal Remote control	NM8N basic or standard electronic moulded case circuit breaker; COMA22-M8 communication module; AX auxiliary contact (optional, indicating opening and closing status); AL alarm contact (optional, indicating trip status); MOD electric operation mechanism.	1. Read phase current 2. Indicate circuit breaker position information (open, closed, trip status) 3. Control circuit breaker opening and closing
Solution 4	Remote measure Remote signal Remote control Remote adjustment	NM8N standard electronic molded case circuit breaker; COMA22-M8 communication module; AX auxiliary contact (optional, indicating opening and closing status); AL alarm contact (optional, indicating trip status); MOD electric operation mechanism.	1. Read phase current 2. Indicate circuit breaker position information (open, closed, trip status) 3. Control circuit breaker opening and closing 4. Adjust the internal parameter settings of the controller (only for standard specifications. For details, please refer to the communication protocol).

9.24 PSU battery box

9.24.1 Function

Provide DC 9V power for the standard (liquid crystal) controller for users to view, set and modify controller parameters. Ranch

Output voltage: DC 9V

Continuous power supply time: 7 hours

9.24.2 Model description

PSU22-M8

9.25 CEM Closing electromagnet

9.25.1 Function

The closing electromagnet is used to close the circuit breaker by remote control.

When the circuit breaker is in the open and energy storage state at the same time, the breaker can be closed at any time. The closing electromagnet device has both AC and DC control. When the power supply voltage is equal to any voltage value between 85% and 110% of the rated control power voltage, closing electromagnet can reliably close the circuit breaker. The working mode of the closed electromagnet is a short-time work system. It cannot be allowed to be energized for a long time. The energization time is between 0.2s and 2s, otherwise there is a danger of being burned.

9.25.3 Model description

CEM25-M8 AC48V

Note : Applicable to 1600 frame motor type.

9.25.4 Electrical characteristics

Rated working voltage U_e (V)	AC48V/110V /220-260V/380-415V DC24V/48V/110-120V/220V
Voltage range	85-110%
Pulse duration range (s)	0.2~2
Power consumption	AC 5VA DC 5W
Circuit breaker closing time (ms)	<70
Breaker opening time (ms)	50±10
Rated insulation voltage (kV)	2
Peak current	6 I_n

9.26 PHS Phase barrier

9.26.1 Function

Guarantees phase-to-phase insulation safety and prevents phase-to-phase short circuits

9.26.2 Model description

PHS 21-M8

Note¹⁾ : For a multi-pole DC circuit breaker, if a 2m long standard wire is used in series, the derating factor above applies.
 Note²⁾ : When the copper short-circuit bar is connected in series, it needs to be further reduced based on the above table (except NM8NDC-1600). The specific derating factor should be determined by users according to their different wiring methods. Derating by a factor of 0.8).

Note : Individual specifications of products need to be derated at a temperature of 50 ° C and above (parameters refer to the table), and Ir needs to be adjusted to the corresponding gear.

For example : NM8N-250 EN 250 3P products are used at 70 ° C. The product needs to be derated to 213A, and the Ir position is adjusted to 0.8In position. The NM8N-250 EM 250 3P product is used at 70 ° C. The product should be derated to 213A, and the Ir position should be adjusted to 213A.

- Note : ¹⁾ No content, meaning no selectivity.
²⁾ 1000, which indicates local selectivity, and the number indicates the maximum fault current to achieve selectivity. For example, selectivity below 1000A can be achieved here, and upper and lower circuit breakers above 1000A may operate simultaneously.
³⁾ T, which means that full selectivity is satisfied within the breaking capacity of the lower circuit breaker.

11 .Ordering notice

11.1 Quick selection of circuit breaker

11.1.1 Quick selection of power distribution and motor protection circuit breakers¹⁾
