Confident
elegance

Merten Antique

A switch range that lives up to its name. Merten Antique has the elegance to match surroundings that need it most – buildings and rooms in a traditional, classical style. This switch series is a clear winner, thanks both to the high-quality materials used and the carefully conceived colour combinations for frames and inserts. Style, pure and simple.

The system principle – Switch system Merten Antique

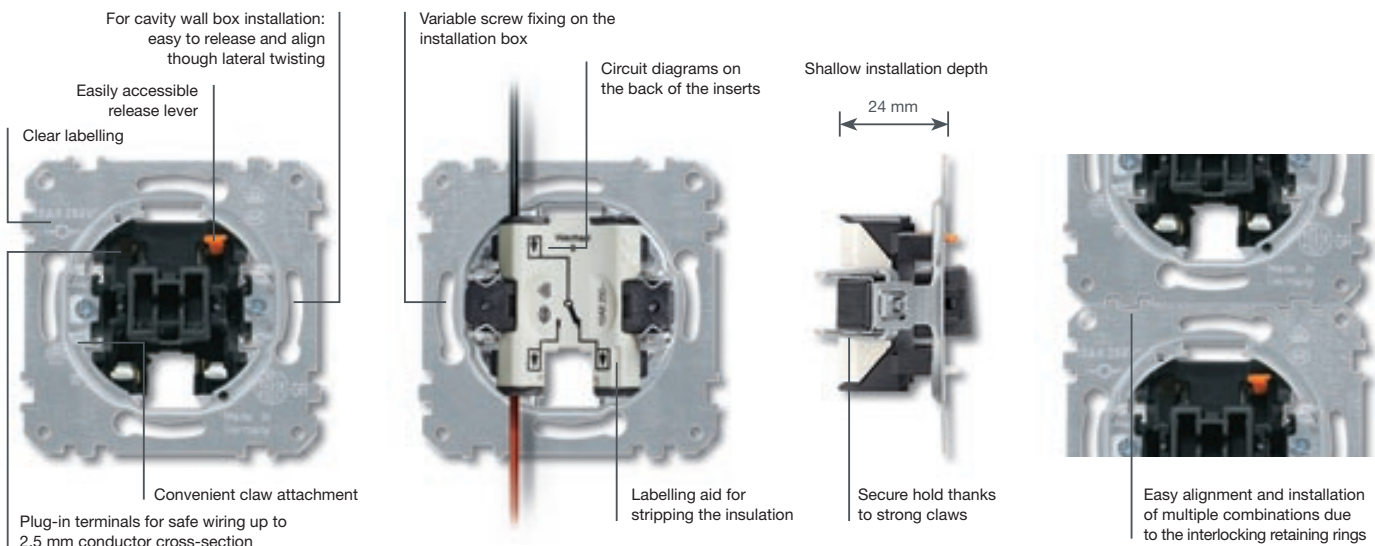

With a large variety of functions, the three design variants Merten Artec, Merten Antique and Merten Tracent combine to create a very broad product range. Change the switch range the easy way: The inserts fit all the different design variants. Just change the frame and it's done.

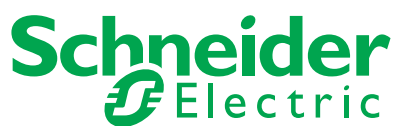

Ease of use

The flush-mounted inserts from Schneider Electric feature a solid retaining ring. This ring prevents distortion or deformation of the insert during installation and allows clean installation even with slightly uneven surfaces. An interlocking system is integrated into the retaining ring for easy installation of multiple combinations. This means that you only have to make an exact alignment for the first flush-mounted insert. All other inserts of the combina-

tion are then only installed according to the interlocking system and the convenient claw attachment. The double plug-in contacts make a secure connection possible. Changing the pin assignment is made simple thanks to the release levers that are easily accessible. Permanent labels on the switch base with circuit symbol, circuit diagram and terminal assignment helps you work quickly and safely.
