

Smart ZigBee Relay Module

Attention!

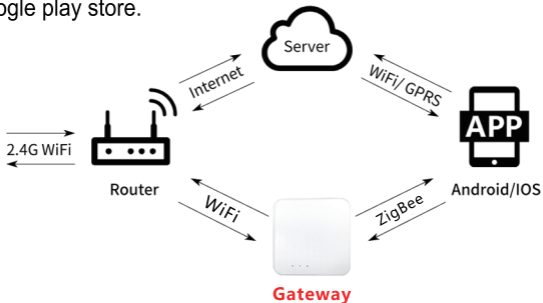

1. The ZigBee device only works with the 'Tuya Smart' and 'Smart Life' provided by Tuya Inc..
2. Tuya ZigBee gateway is required for Tuya ZigBee devices. The gateway needs to connect to a 2.4GHz WiFi.
3. Place your smart gateway, smart phone and devices as close as possible, otherwise adding devices may fail if the signal is not strong.
4. If adding the device fails, restart the gateway before attempting to add the device again.

How to do wiring?

Download Smart Life or Tuya Smart app from app store or Google play store.

Smart Life

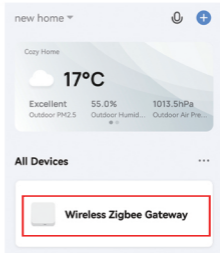

Tuya Smart

Add Device

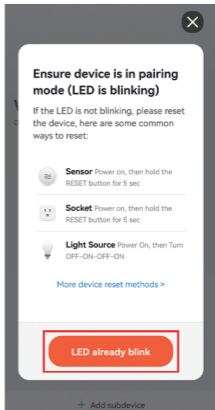

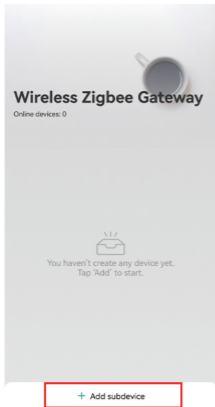

Please make sure you already have a Tuya Zigbee gateway and configured before connecting this Zigbee module.

Power up the module, then press the reset button for 5 seconds until the indicator light flashes quickly, then click 'Wireless Zigbee Gateway'.

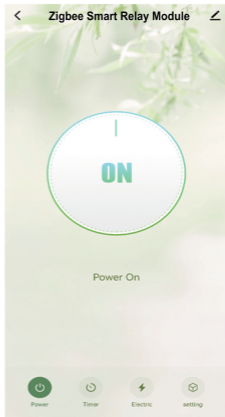

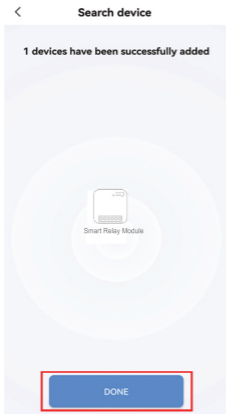

Note: To Ensure the Zigbee Signal Is Strong, Please Make the Module Be Close to the Zigbee Gateway.

Click '+ Add subdevice'. If the Zigbee module is blinking quickly, click 'LED already blink' to search devices.

Click 'Done' and then you can control the module by your phone app.

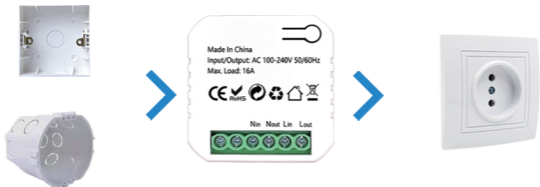

How to install the module?

A. Din Rail Mount

B. Put in Socket

Trouble Shooting

If your Echo Alexa can't find the module:

1. The Echo Alexa and smart device should be set up in the same 2.4GHz WiFi network.
2. Every time you change the device's name on the Smart Life app, Echo must re-discover before you control them.
3. If you still can't find the device by Alexa. Disable the Smart Life skill, then enable the Smart Life skill again. After that, try to find the device in Alexa app again.

If you can not control the module by Smart Life app:

1. Our app only supports 2.4GHz WiFi network, and the router and the smart device should be in the same network.
2. Remove the device in the app and try to add device again.

If your smart devices is offline in Smart Life app:

1. Remove the device in the Smart Life app.
2. Add the device according to the user manual.
