IMPORTANT NOTES:

- ✓ Other axis available, please consult "Axel options"
- ✓ Diameter of inlet pipes lower than indicated in our technical catalogues as well as a poor sealing can cause cavitation phenomenon to occur, thereby deteriorating the pump
- ✓ Keep up the deposit above pump level
- ✓ Used always return filters. We recommend filters with mesh equal to or lower than 25 µm
- ✓ The connection of inlet pipes in the pump, can be done by threading or flange and the sealing by orring
- ✓ Use a good quality mineral hydraulic-oil with viscosity at operating temperature between 20 and 46 cSt
- ✓ Fill the oil tank to 85% of its maximum capacity (the remainder 15% must not have oil)

Keep up the deposit above pump level
