HYDRAULIC MOBILE COLUMNS
PMC 65H | 75H | 86H

PROFESSIONAL LIFTING, WITHOUT COMPROMISES

The SICE PMC 65H, PMC 75H and PMC 86H hydraulic mobile columns are designed to support lifting activities in the workshop that require control precision, operational reliability and structured process management.

Within the context of the modern workshop, lifting represents a central phase of daily operations. For this reason, SICE has developed a range of mobile columns based on design criteria oriented towards safety, operating continuity and performance stability, even in the presence of intensive use.

The SICE hydraulic mobile columns originate from experience in professional lifting and integrate advanced technological solutions and intelligent control logic, with the objective of simplifying operations and improving overall workshop efficiency.

SICE PMC 65H | 75H | 86H

Efficient lifting
and optimised
handling

High manoeuvrability, reduced effort

The **integrated hydraulic trolley** allows movement of the columns in a rapid and controlled manner, reducing positioning times and improving operating ergonomics. A configuration designed to guarantee smooth operation even in complex working environments or in the presence of limited space.

Reliable energy for continuous work cycles

Autonomy designed to support productivity

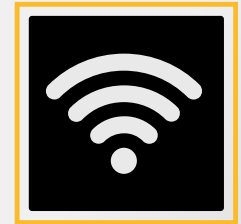

Long-life 24 V dc high-performance Gel **batteries** guarantee **approximately 30 lifting cycles** per recharge, ensuring continuity of work, **minimal maintenance** requirements and reliable performance over time. They can be recharged via a normal electrical outlet and the integrated **battery charger**: 100/240 V - AC; 50 /60 Hz, 8 A.

Constraint-free synchronised lifting

Coordinated and controlled lifting

The **wireless synchronisation system** allows uniform movement of all columns, eliminating the need for wiring and simplifying system configuration. The system supports connection of up to **8 columns**, guaranteeing precision and safety during all lifting phases.

Total adaptability to different vehicle types

Design flexibility to adapt to every vehicle

The **adjustable forks** allow benefiting from a wide tyre grip range, spanning **from 60 to 135 cm**.

This solution guarantees **operational versatility, load stability and safety** during lifting operations, even on vehicles with different configurations.

Intuitive digital control on each column

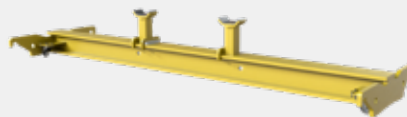

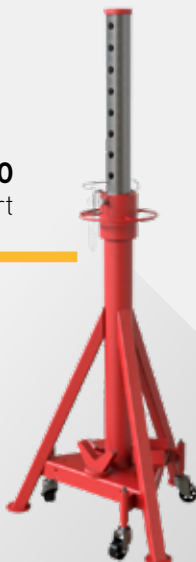

Advanced control, information always visible

Each column is equipped with a **colour touch screen display**, offering a clear interface for operation management and system status monitoring.

Accessories

NX155023001010
Fixed support

NX155023001040
Lifting crossbar

NX155023001077
Trailer crossbar kit

NX155023001072
Pick-up crossbar kit
(only PMC86 H)
