

City Ranger 2200 Snow Blower

The City Ranger 2200 snow blower gives extra power for clearing snow. Combine this with the already powerful City Ranger 2200, it clears snow up to a metre high. It is specially-built to deal with heavy work and well-suited to more demanding sites such as ski resorts.

It is also very useful in locations where there is not enough room to clear the snow to the side.

Efficiency in two stages

The snow blower works in two stages. The auger ingests the snow and feeds it to the blower chute, which ejects the snow 5-10 metres away, depending on the operator setting. The setting (direction of ejection and height) is controlled from the cabin seat.

The snow blower is often used with the salt and sand spreader, which makes paths even safer.

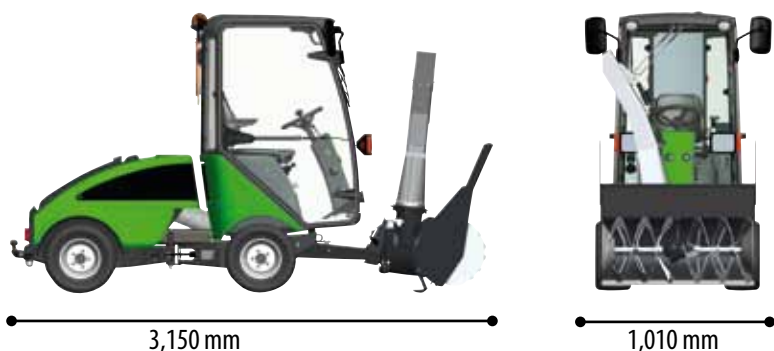

When you change attachments, the City Ranger 2200 hydraulic hoses are connected at the turn of a handle!

Technical data

Snow Blower

Technical information

The snow blower has an adjustable chute that ejects snow 5–10 m away.

It has a replaceable blade and an adjustable skid.

Extra equipment

Counterweight:

If the snow blower is being used without the salt and sand spreader we recommend the use of a counterweight for balancing.

Dimensions

Fitted:

Length	3,150 mm
Width	1,010 mm
Height	1,500 mm

Storage dimensions:

Length	850 mm
Width	1,010 mm
Height	1,500 mm

Technical data:

Own weight	170 kg
Clearing width	1,003 mm
Feed intake height	700 mm
Ground clearance below snow blower	250 mm
Auger diameter	460 mm
Ejection chute diameter	350 mm
Axle revolutions per minute	1,000 rpm

CE certified according to EU Directive
