

Park Ranger 2150 Snow V-Blade

The Snow V-Blade truly shows the engine power and strength of the Park Ranger 2150. When the snow is heavy and hard, the tip of the V breaks the snow crust and ejects the snow to both sides. Even large amounts of snow are removed with ease.

The snow blade is flexible, and in addition to taking a V shape, it can also be set to be straight, or Y shaped. The Y-shape option is practical when the snow has to be moved away from the area being cleared and collected in a particular location, such as the corner of a courtyard or parking area.

The Snow V-Blade works perfectly together with the salt and sand spreader. The Park Ranger 2150 is therefore able to clear snow and protect against slippery surfaces in a single operation.

With the Park Ranger 2150 the changeover from one attachment to another is done in less than 4 minutes - no tools required!

Technical data

Snow V-Blade

Special features

Handles snow up to 50 cm thick

Clearing width 1.3–1.4 m

Both blades hydraulically-adjusted

Steel blades as standard

Safety tilt system

2 skids for height adjustment - uneven pavements and low curbs require e.g. high adjustment

Lateral floating position – skid and blade follow the terrain

Can be combined with the salt and sand spreader for double efficiency

Extra equipment

Rubber scraping edge for surfaces that require extra care

Dimensions

Fitted:

Length	2,700 mm
Width	1,200 mm
Height	1,935 mm

Storage dimensions:

Length	600 mm
Width	1,200 mm
Height	600 mm

Technical data:

Weight	102 kg
Clearing width	1,300–1,400 mm
Ground clearance under scraper	230 mm
Ground clearance under support strut	140 - 240 mm

CE certified according to EU Directive
